COMPANY MEETINGS, &c.

ROYAL BANK OF SCOTLAND.

ANNUAL GENERAL COURT OF PROPRIETORS.

LARGE INCREASE IN THE BANK'S BUSINESS.

The annual court was held at Edinburgh on 24th instant, Mr James A. Fleming, K.C. (chairman of directors), presiding.

In moving the adoption of the report, the Chairman said: I presume it will be your pleasure that the annual report and balance-sheet, with the auditors' report, which has now been in your hands for some days, shall be taken as read.

INCREASES IN DEPOSITS AND ADVANCES.

In submitting this report your directors have again to record a large increase in the business of the bank. The deposits have been added to by over three and a-half million pounds, and stood at the date of the balance at over £39,000,000, whilst the advances on cash credit and current accounts have increased by over four and a-half millions to £13,625,000. Notwithstanding this growth of commercial advances, the liquid position has been well preserved, as, in addition to what might be termed the ready money reserves of the bank, which form our first lines of defence, our holding of British Government Treasury bills has been increased by nearly £850,000, and amounted at the date of the balance to £6,930,000. These Treasury bills mature from day to day, and apart from the other first-class bills in our portfolio, which also show a considerable increase over last year's figures, form a ready resource of a liquid character. The increase in the deposits, as well as in the advances, is very generally spread over the whole system of the bank. As regards the advances, it was fully expected that there would be an extensive demand following upon the developments of our post-war trade. The figures being handled by many firms and companies are necessarily greatly in excess of their pre-war experience, and, as you will appreciate, the utmost care is required in dealing with the business which comes before the bank from week to week—especially at the point we have now reached, when commodity prices are tending downwards. Your directors have endeavoured to meet the legitimate trading requirements of the Bank's customers in a sympathetic way, and, whilst discouraging all mere speculation, have, as they believe, assisted materially in the productive enterprise of the country at a critical period. On the part of the bank, the difficulties of manufacturers, merchants, and traders are fully realised in respect of the greatly increased resources that are required owing to high prices and the conditions which have affected the obtaining of stocks of commodities, owing to Government control and other causes.

EFFECTS OF EXCESS PROFITS DUTY.

The continuation of the excess profits duty, which in numerous cases has operated harshly and inequitably, has exacted a heavy toll from many businesses where it was of the utmost importance in the interest of the commercial recovery of the country that profits should have been accumulated and retained to meet the special requirements of a difficult time. This tax, though justifiable as an emergency war measure, can scarcely be upheld as applicable to the period of reconstruction. Its result in many cases is that whilst what are called "excess profits" have been made, there is no money available to pay the duty with—these profits taking the form in not a few instances of raw materials and stock-in-trade necessarily held at high prices, or it may be of extended premises or increased and costly machinery and plant. The banks have done their best to meet the difficulty, but it has always to be remembered that the root principle of sound banking is the maintenance of a liquid position having regard to the obligation to repay deposits on demand. As regards the general situation, it is well to keep in mind that there is no royal road to commercial and financial salvation for the nation, any more than for the individual, and the country will only escape from its present embarrassments by drastic economies, alike in national as in individual expenditure, and by increased production through harder and better work.

INCREASED PROFITS.

As was to be expected from the large business done, the results of the year's operations have been most satisfactory as regards the profits earned by the bank. The gross profits, after making various provisions, including a provision for depreciation in investments in addition to that stated in the profit and loss account, exceed those of the previous year by about £120,000; but the charges of management have been increased by £70,000, so that the increase in net profit is £50,000, or thereby. It is a pleasure to record that, as noted in the report, additions of a substantial character have been made to the remuneration of the staff in the course of the year. This will tell more heavily on the charges account during the next year, as the accounts only include the results of the most recent increase for the last three months of the bank's financial year.

INVESTMENTS—PROVISIONS FOR DEPRECIATIONS.

As is well known, a patriotic duty was imposed upon the banks to help in financing the war by taking large blocks of the different War Loan issues and the Royal Bank of Scotland accepted their full share of responsibility in this matter. For reasons which need not be entered into here, there has been a very considerable shrinkage in the market quotations of these stocks during the year, and in common with all banks and other institutions who hold high-class securities the bank has been faced with depreciation upon a scale which could scarcely have been contemplated. It is to be regretted that the largely increased earnings of the bank during the year have been swallowed up in the provisions which have been necessary to meet this depreciation. It is satisfactory, however, to think that the bank have been able to face the whole of this depreciation without encroaching upon their public reserve or rest, which still remains at last year's figure—namely, £1,082,276. As you will observe, all the investments, including the bank's large holdings of War Loans, are valued in the state of affairs at or under the prices ruling at the date of the balance, with the exception of certain holdings of very short-dated Exchequer Bonds and National War Bonds payable at par or at a substantial premium within the next four years, which are taken at cost. Other provisions are, however, amply sufficient to cover all market depreciation on these bonds. In this connection, it may be explained that the greater portion of the reduction in the amount of British Government securities as compared with last year's figures is due to the maturing during the year of certain holdings of Exchequer Bonds.

APPROPRIATIONS.

Apart from the provisions against depreciation, the other appropriations of the year are the same as those of last year. The dividend and bonus absorb the like amounts. £20,000 has been written off bank buildings and heritable property, and it is agreeable to reflect that the value of the various buildings belonging to the bank must now represent in the aggregate a very much greater figure than that at which they stand in the balance-sheet. In this connection, it may be noted that owing to the improved demand for heritable property the bank have been able to effect sales on advantageous terms of a number of subjects which had fallen into their hands in past years. In view of the largely augmented charge for salaries, it has been thought desirable to continue the provision of a further substantial sum towards pension reserve fund, as the increase in salaries involves as a consequence corresponding benefits to the staff as regards the amount of pensions which will become payable under the bank's superannuation scheme.

It is unnecessary to dwell upon the greatly added strength which all these provisions give to the institution.

EXTENDED POWERS UNDER NEW ACT.

The provisional order which was promoted by the bank, and which received the approval of the proprietors at a special meeting held on May 26th last, passed into law as an Act of Parliament on August 16th without material alteration. With the extension of the powers conferred upon the bank under this measure, the institution has been brought into line with all modern requirements, and the bank is now placed in as favourable a position as any banking concern in the United Kingdom to meet the greatly extended needs of its customers, whether at home or abroad.

FOREIGN EXCHANGE BUSINESS.

The foreign exchange departments established at the head office, at the principal Glasgow branch, and at the London office of the mank, have done a largely increased business during the year, and the whole organisation for dealing with foreign and overseas business on the most favourable terms at every branch office of the bank has yielded most satisfactory results, alike to the bank's customers and to the bank itself. It is the constant desire of the directors and of the management that the bank, whilst maintaining its distinctive character as a Scottish institution should be able to undertake every description of banking business, and perform every class of service which is open to a British bank, and it is believed that this is being achieved with success and to the satisfaction of our large and growing body of clients.

The report was approved, and a dividend was declared at the rate of 10 per cent. per annum for the half-year, together with a bonus of 1 per cent., both being subject to deduction of income-tax.

The governor, deputy-governor, extraordinary directors, and the retiring ordinary director were re-elected, and auditors were appointed for the ensuing year.

ANGLO-EGYPTIAN BANK, LIMITED.

AFFILIATION WITH BARCLAYS BANK.

SATISFACTORY RESULTS OF YEAR'S BUSINESS.

DIFFICULTIES OF PRESENT BANKING.

The thirty-fourth ordinary general meeting of the Anglo-Egyptian Bank, Limited, was held, on the 23rd instant, at the bank, 27 Clement's lane, London.

The secretary (Mr Geo. H. Soul) read the notice convening the meeting and the auditors' report.

The Chairman (Mr Raoul H. Foà), in the course of his remarks, said: Gentlemen,—Since I last had the pleasure of addressing you the position of affairs throughout the world has undergone much change. A very noteworthy occurrence in the history of this bank has been the acquisition of over 101,000 out of the 120,000 of our shares by Barclays Bank, Limited. The affiliation of our business to one of so strong an institution as Barclays Bank seemed to me and my colleagues eminently desirable, and that our opinion was shared by a large majority of the shareholders has been proved by the number of those who accepted the offer of purchase made by Barclays Bank, Limited.

LORD MILNER'S MISSION.

The object which the chairman of Barclays Bank had in view in acquiring our business was the very laudable one of wishing to create a chain of banks working in all portions of the British Empire and its Dependencies, though I question whether, in view of the negotiations now going on between the members of Lord Milner's Mission and the members of the Egyptian Nationalist Party, headed by Zaghlul Pasha, this be the right term to use to describe the relationship which is to exist between Egypt and England, and which will perhaps be modified in the way in which you have had detailed in the newspapers. Politics do not come within the scope of the matters I have to deal with, and I can only express the hope that the outcome of these negotiations will be satisfactory to both England and Egypt, for any alliance in which one of the Allies is dissatisfied never lasts long. By years of toil we have built up for you a fine business in Egypt, and I hope and believe that, whatever conditions may obtain in Egypt, the prestige of the Anglo-Egyptian Bank will always remain on the high pinnacle which it now occupies.

Last year I told you that we were in negotiation to obtain a site wherein to house ourselves with a sufficiency of space to enable our large staff to cope with the ever-increasing flood of work pouring in upon us. I am sorry to say that the negotiations fell through, and it was only a month ago that we were able to obtain a site for our new offices, and the purchase money has now been paid. If we are lucky we shall be in occupation of them within 12 months, and if such be the case the present occasion will be memorable as being the last one of the meetings of our shareholders which for 55 years have been held here.

PRICES OF COMMODITIES.

At this time last year the prices of commodities were very high; this year a fall, especially marked in raw materials, has taken place and promises to become even more marked. At the end of last year there was still a great demand for all material, raw or manufactured. The price of cotton, the staple commodity of Egypt, stood at 45d for fully good fair Sakellaridis, and rose to 96d on February 20th, to fall to its present price, 32½d.

Among the directors facing you to-day is Mr J. E. Mounsey, a director of Barclays Bank, who has been nominated by them to represent them on our board, and whose election at your hands we cordially recommend. His knowledge of banking is great, and will, I am sure, be of great use to us. Another new-comer among us, and one whom I am specially glad to recommend to you for election, is Colonel Hall. When I was in Egypt last year I came across him, and was much struck by his profound knowledge of Egypt and the Egyptians. For more than 23 years he has lived in that country, and has built railways both there and in the Sudan, and when I had the advantage of making his acquaintance he was occupying the position of traffic manager to the Egyptian State Railways.

Dealing with the demands made by the staff in Egypt, he said that he and Colonel Hall, as the outcome of a visit to Egypt, had dealt, he hoped, successfully, with what had been a burning question. Salaries had been increased, and liberal allowances made so long as the high cost of living lasted.

DIFFICULTIES OF PRESENT BANKING CONDITIONS.

Continuing, the Chairman said: Conditions throughout the world governing the movement of merchandise and dependent generally upon the insufficiency of cash and of credit, have made banking a more than usually difficult and pre-occupying calling. You have, no doubt, read how nearly all banks have been obliged to restrict the accommodation given to merchants, their customers, and although we are not inclined, of course, to encourage further business at the present moment, I am sure that there are but few instances where we have had to deny our customers the assistance they have required at our hands. The great fall in the value of Manchester goods has not added to our feeling of security in Egypt, but I think I may tell you that we have taken all possible precautions to safeguard your interests in these, as in all matters coming under our purview.

BALANCE-SHEET ITEMS.

To turn to our balance-sheet, you will see few important changes. The deposit, current, and other accounts have fallen from £17,100,000 to £15,400,000. On the other side, the cash in London, &c., has fallen from £3,600,000 to £1,900,000. Of our investments, £1,750,000 are short-dated securities and will, within a very short space of time, be repaid at a premium. The bills receivable, including Treasury bills, amount to £8,460,000. You will remember, of course, that we are dealing with figures as at August 31st, which is the apex of the idle time in Egypt. As to the distribution, we propose to pay to the shareholders the very handsome dividend of 15 per cent., plus 2½ per cent. bonus, both free of income-tax, as has been our custom in the past few years. We reserve for the premises nearly £13,000, and we carry forward £50,000, whereas last year we only carried forward £40,000. In conclusion, the Chairman moved the adoption of the report and accounts.

Mr H. A. Richardson seconded the resolution, which was unanimously carried, and the dividend and bonus, as recommended, payable on the 1st prox., were also approved.

VOTE OF THANKS TO THE CHAIRMAN.

The retiring directors and the auditors having been re-elected, Mr Cosmo Bevan, in proposing a vote of thanks to the chairman, said that Mr Foà had spoken of the affiliation of the business to Barclays Bank as eminently desirable, and he, on his part, considered that Barclays Bank had taken a wise step in attaching to their chariot wheels an institution of the strength and calibre of the Anglo-Egyptian Bank, which was making great progress in that part of the world where Barclays had been anxious to develop its business.

Mr Leonard K. Jarvis seconded the resolution, which was unanimously carried, the Chairman briefly responding.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED

INCREASE IN GOODS TRAFFIC—PROSPECTS.

The ordinary general meeting of the Argentine Great Western Railway Company, Limited, was held, on the 22nd instant, at Winchester House, Old Broad street, London, the Right Hon. Viscount St Davids (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: As you are aware, under the terms of our working agreement with the Pacific Company we are entitled to a dividend of 5 per cent. on the preferred and ordinary stocks when that company pays 5 per cent. to its ordinary stockholders, and a dividend at that rate has been paid to the ordinary stockholders of that company in respect of the year to June 30th last. In May last you received dividends of 2½ per cent. on both stocks, and with the dividends we now declare you will receive a dividend at the rate of 5 per cent. on both the preferred and the ordinary stocks.

You were informed at the general meeting last year that separate records of the earnings of this line were no longer to be kept, but we stipulated that the Pacific Company should continue to keep a separate account of the tonnage of goods carried and the number

of passengers transported over our line, and therefore our statistics only deal with the latter figures.

If you will refer to the report you will see that there was a considerable increase in the number of passengers carried,. and a small increase in goods traffic over the figures of the preceding year, the chief increase being in the tonnage of vine products, which rose from 630,000 to 650,000 tons.

The tonnage of goods traffic suffered considerably, owing to the decrease in merchandise passing to and from Chile because of the closing down of the transcontinental service for over three months, owing to snowstorms in the Cordillera.

Although your dividends do not depend on the traffic receipts of the line, it is gratifying to know that your line has shared in the prosperity of the past year, and I would point out that had receipts from the passenger traffic and goods carried been shown there would have been a considerable increase over the figures of the year to June 30, 1919, owing to the higher rates put in force. On the other hand, higher wages have had to be granted, and the cost of maintenance and working expenses has risen very considerably.

From the statement of capital expenditure you will see that the principal work was on renewal of line, principally on the San Juan branch, where we are replacing the light rail of 54 lbs with 100-lbs rails and hard wood sleepers, and the amount of £94,419 is the capital proportion of the work. Old rolling stock has also been withdrawn from service, the credit of £85,000 being the amount which has been borne by the working company, and our capital account will be charged with cost of replacement as and when the new stock is put into service.

The outlook for the current year is good, for not only is there a large quantity of wine to carry—there being some 315,000 tons stock of the old harvest still to carry—but the vineyards are in good condition, and there is reason to expect better results from the general cultivation of vegetables.

The Hon. Charles N. Lawrence seconded the resolution, which was carried unanimously.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY COMPANY, LIMITED.

LARGE INCREASE IN TONNAGE CARRIED.

The thirty-first ordinary general meeting of the Bahia Blanca and North-Western Railway Company, Limited, was held, on the 23rd instant, at Winchester House, Old Broad street, London, the Right Hon. the Viscount St Davids (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said: As your income is guaranteed by the working company, you are not interested to the same extent in the working of the line as you would otherwise be, but I feel sure you will be pleased to see from the figures of tonnage carried how your property has shared in the general prosperity of the country during the past year. The tonnage of cereals carried is well above the record of any previous year, no less than 1,334,000 tons being carried, the chief increase being in the wheat traffic. There is a total goods tonnage of 1,842,000, against 1,069,000 tons in 1918-19, an increase of 72 per cent. Passenger traffic and livestock also showed large increases.

We had a very busy time at our port, and you will have noticed from our report that 154 steamers loaded during the season. The facilities at the port were severely taxed, and we have been asked by the Pacific Company to sanction additional grain storage and accommodation. Only works absolutely necessary will be sanctioned, and a reference to page seven of the present report shows that the capital expenditure for the year to June 30, 1920, was £50,700, of which over £30,000 was spent on Port Galvan. You will also notice that old rolling-stock to the amount of £141,000 has been withdrawn from service.

Last year a reference was made to the extension of oil burning in our engines, but the board decided that the capital outlay necessary for oil fuel requirements for the whole line should not be undertaken until supplies were assured. The opportunity arose of the working company obtaining an interest in an oil property at

Comodoro Rivadavia, and that company, together with the Buenos Ayres Great Southern and Buenos Ayres Western companies, has taken a lease of the oilfields of the Compania Argentina de Comodoro Rivadavia, and steps are being actively taken to develop the property.

The general manager has telegraphed to us what he thinks are accurate figures, and he says that between drought and hail he reckons that 11 per cent. of the fine cereals have been lost.

On the other hand, what has not been lost appears, so far as one can judge, to be in very good condition indeed, as the weather, on the whole, has recently been favourable. You understand that when I am talking of fine cereals I mean wheat, oats, and linseed.

The report was unanimously adopted, and the usual formal business transacted.

AUSTRALIAN, MERCANTILE, LAND AND FINANCE COMPANY LIMITED.

RESULTS OF THE SEVERE DROUGHT.

PROPOSED NEW SHARE ISSUE APPROVED.

The fifty-sixth annual ordinary general meeting of the Australian, Mercantile, Land and Finance Company, Limited, was held on the 25th instant, at the Cannon street Hotel, London, Mr Robert Henryson Caird (managing director) presiding.

The secretary (Mr H. R. B. Lilley) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said:—The year dealt with in the report has been one of great anxiety on account of the drought, and it was only during the last month of that year that that anxiety was at all relieved.

The losses of stock have been heavy, and we do not now know how heavy, for the latest available statistics for New South Wales only give the losses up to December 31st last, when there were 5,553,394 less sheep in New South Wales than on December 31, 1918, and I am afraid we must reckon that losses continued right up to June 30, caused by the drought and starvation, and even after that in several districts heavy losses were caused by the floods. I may tell you that the special drought expenses for the year were £49,806, and if it had not been for the drought your profit would have been so much greater. There will, of course, be further heavy drought expenses this year, but the drought itself is now a thing of the past, and we may reasonably hope for a few good seasons; already we hear of abundance of food and water, and the probability of a record harvest.

Though our expenses have been very heavy, I am glad to be able to tell you that we have been successful in saving the greater part of our valuable breeding flocks, and with a double lambing, which we propose to take, we hope soon to restore our numbers to what they were before the drought set in more than two years ago.

FINANCIAL COMPLICATIONS.

The financial position is complicated by the anomalous position of the wool market, and it is difficult to calculate what sums may be required to finance our own and our friends' wool, pending sale, but it seems certain that a great part of the clip will be slow of sale, and that very considerable sums of money will be required to enable our friends to carry on their business without sacrificing their produce at a time when the very heavy weight of Government held-over wool is hanging over the market, and no one knows what may happen to prices.

Another complication is the present state of exchange between England and Australia. Six months ago there seemed to be far too large a proportion of the resources of the Australian banks in London, but the extraordinary volume of exports from this country to Australia has completely reversed this, and the difficulty now is the banks have not in London, at any rate, in a liquid form, sufficient resources to enable them to buy the bills of exchange offered to them.

This is most unfortunate, especially for this country, at a time when one of the most vital needs is an increasing flow of exports. Various plans for coping with the difficulty have been propounded, and the Commonwealth Government have approached the Chancellor of the Exchequer with a proposal that he should anticipate part of the profits on the sale of the wool purchased by the Imperial Government, one-half of which belongs to the Australian growers. That Australia can pay there is no doubt whatever, and she can pay in products we badly want, for the grain harvest alone this year is estimated to be worth 80 to 100 millions sterling, and surely it is better to foster such trade than to embark on speculative adventures into Russia.

BOARD'S FINANCIAL POLICY.

A consideration of all these circumstances has convinced your directors that the time has come when our resources should be augmented, and we have therefore called up the £2 on the 40,000 shares on which only £3 had been paid. This course has been adopted chiefly in order that the old present issued capital should be on the same footing, and so that any future issue of shares could be made *pro rata* to the shares held, which could not have been fairly done when different shares had different amounts paid up.

The state of the money market here has driven us to the conclusion that what I may term the original scheme of finance, whereby we worked so largely on borrowed capital, should be abandoned, and that, at any rate for the present, any new capital should be raised by means of a share issue, to be fully paid up, and by offering all such shares to the shareholders in proportion to their holdings it is thought that at any rate every shareholder will have the opportunity of retaining the full benefit, whereas if we had followed our old practice of issuing debenture stock we should have had to pay a very high rate of interest—perhaps not so high as the rate of dividend we hope to pay on the shares, but it would be going into some one else's pocket, and not into our own. There is no object in retaining so large a denomination as £25 for our unissued shares, and we think that a £5 share will be more convenient for distribution *pro rata*, and more readily marketable when fully paid than would a share of £25. When I speak of abandoning the policy of working with borrowed capital, of course, I mean for future issues, and I do not refer to our splendid asset of nearly two millions of borrowed money, which costs us less than 4 per cent. per annum.

DIVIDEND PROSPECTS ON INCREASED CAPITAL.

Now, of course, the first thought that strikes one is, can we hope to pay as good a dividend on the increased capital as we have been able to pay on the present capital? That is a question to which you must find your own answer, but to help you to form a judgment I should like you to consider what we have done in the last 10 years, and, mind you, those 10 years include two very severe droughts. Well, we have paid an average of 12½ per cent., and we have added to reserves, out of profits, £250,000. We have also written off all losses, including £125,000 written off for depreciation in the price of gilt-edged securities, now nearly all short-dated, and therefore more likely to appreciate than to depreciate further. Our reserves are now ample, and I do not see why they should be further increased. Indeed, I think it may be good policy to decrease them by capitalisation, for in these days a nominal high rate of dividend may become a danger, and so long as a shareholder gets the same amount of money it does not matter to him whether it is at the rate of 15 per cent. on £5 or at the rate of 7½ per cent. on £10, and we are asking you to make such alteration in the articles of association as will enable you by ordinary resolution to authorise some such conversion of reserves into capital.

NEW ISSUE EXPLAINED.

We are doing this now to avoid having to hold two meetings when the time comes to make such an issue, but in the meantime, provided you pass the special resolution, we propose to make an issue of 60,000 of the new shares to be paid for at par by the subscribers, and to be offered to the present shareholders in the proportion of one new share for every two shares of £25 each held when the books are closed. Of course, you will understand that what I have just said about capitalising part of the reserves does not apply to this issue, for getting the new money there should be no reduction in our dividend-paying power when this money comes into full use.

As the £300,000 to be paid for these new shares will not be available for the current year the shares will not participate in the dividends to be paid during 1921, but instead they will be paid interest at the rate of 6 per cent. per annum, free of income-tax, from the date the calls are paid up to December 31, 1921, and thereafter they will rank for whatever dividend we may be able to pay. In the meantime they will, however, rank for any distribution of bonus shares that may be made.

BALANCE-SHEET ITEMS.

I do not know that there is much in the figures of the balance-sheet and profit and loss account that requires explanation. We have bought in a little more of the debenture stock, and the "sundry creditors" shows an increase of about £100,000. On the assets side "cash" is a few thousands less than last year, and "investments" is less by more than £150,000, for we sold all our War Loan last year at over 94, while "loans on land, &c.," shows an increase of nearly £237,000, which is satisfactory, as that is the active line of business.

COMPANY'S PREMISES.

The item, "freehold and leasehold premises," shows a small decrease, but that line will probably show a considerable increase in our next balance-sheet, for, as I expected last year when I addressed you, we are now building on the site we bought in Coleman street, and the building is making such good progress that I think we may confidently expect to hold our annual meeting next year in our own offices.

The Chairman, after severely criticising Mr Theodore's policy of confiscation, continued: I think your thanks are due to your

officers abroad for the very admirable way they have conducted your business. Mr James Kidd, as general manager for Australia, is ably assisted by Mr Boyne in charge of the Melbourne branch, and Mr Bond in charge of Sydney, while Mr Fowler, acting during Mr Devereux's absence on leave in this country, has been in charge of the Brisbane office, and Mr Bailey continues in charge in Argentina, where, though the winter has not been too favourable, we are getting our properties into good shape, and also extending our agency business. I must not forget your London office staff, where Mr Lilley still remains in charge.

LATEST REPORTS FROM AUSTRALIA AND ARGENTINA.

In order that you may have the latest information about both Australia and Argentina, I will read the latest cables I have received :—From Australia :—" Seasonal conditions all three States excellent, abundance feed and water and stock doing well, but general tendency towards easing value stock and flush feed has caused good deal trouble from flies, but this now diminishing. Pastoralists insuring against possible fire trouble. Prospects of crops are exceptionally good in all three States, but extreme labour demand wages may drive farmers cut exceptional proportion for hay." From Argentina :—" General rains have saved agricultural pastoral situations. Crops prospects satisfactory."

After the Chairman had answered some questions and the usual formal business had been transacted, the motion was unanimously adopted.

At an extraordinary general meeting resolutions were passed dividing each of the 40,000 shares of £25 each into five shares of £5 each, and altering the articles of association in order to give powers for further shares to be issued as bonus shares.

SOUTH DURHAM STEEL AND IRON COMPANY, LIMITED.

"LARGEST RETURN IN COMPANY'S HISTORY."

The twenty-first adjourned annual general meeting of the South Durham Steel and Iron Company, Limited, was held on the 24th instant, at Middlesbrough, Lord Furness (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, reviewed the accounts for the year ended September 30, 1919, stating that although the divisible profit was less by nearly £90,000, a 20 per cent. dividend had been paid on the ordinary shares, £50,000 had been allocated to depreciation, and £150,000 to deferred renewals and repairs. The cost of these renewals and repairs was heavy, and in view of the current high prices they found it essential to make increased provision under this head. It would appear that they would soon have to write down the value of their stocks, as there were ominous signs of increasing competition from abroad, foreign steel being offered at such low prices as would necessitate the reduction in the value of these stocks.

CONTINENTAL COMPETITION.

By way of example, he mentioned what were known as semi-manufactures—that is, steel slabs, blooms, and billets. These were imported largely from Germany before the war, and were now being offered from France, Belgium, the Saar Valley, and Luxembourg at exceedingly low prices, whereas the present price of blooms and slabs in this country was £20 to £22 per ton. Continental makers had recently been delivering these in the Tees at £14 per ton. Such prices as these must necessarily affect and largely reduce the stock values, and this meant that the home price of steel must be reduced. British manufacturers, however, would find this very difficult to accomplish without loss in view of the present high prices of every item of railroad rates, to say nothing of decreased production, which had the inevitable effect of increasing costs. It was therefore incumbent upon us as a nation not only to cut down our expenditure and eliminate waste in every possible shape or form, but also to put forward every effort to ensure increased production. So far as the steel and iron trade was concerned, increased production could not be obtained with an inadequate supply of coal and ore to keep the works occupied to their fullest capacity, hence the vital necessity for a maximum output of coal, which could only be achieved by increased individual effort and abolition of strikes. Continuing, he said that in accordance with the policy to which he referred last year, they had invested a further sum of £300,000 in an affiliated company, and they were still pursuing that policy, the principal object of which was to ensure their supplies of raw material.

COMPANY'S PROSPECTS.

Prior to the war the company relied upon the open market for its raw materials, which were principally coal and pig-iron, but the scarcity of these commodities had caused the directors to concentrate upon making the company more independent of supplies from outside sources. With regard to the future, he was glad to say that the demand for their main product—steel plates—was

very good. They had large orders in hand, but the ultimate result of these was entirely dependent upon whether shipbuilders were able to fulfil their contracts in the time specified. In this connection a large number of shipbuilding orders had recently been cancelled, and naturally, if such cancellations became at all numerous, there was no knowing what the ultimate effect might be on the steel plate orders they had already booked. He was glad to say that their relations with their employees continued harmonious, and that their works had not been idle through any fault of their own workmen, although, unfortunately, many shifts had been lost through strikes in other trades, which caused loss of work in their mills for want of materials. Lord Furness afterwards moved the adoption of the report for the year 1919. As the accounts for the year ended September 13, 1920, were not yet ready, owing to delay in determining the company's liabilities to the Government for taxation, Lord Furness explained that the twenty-second annual general meeting would have to be adjourned to a date to be fixed by the board for presentation of the accounts relating to the past year's operations. Meantime, after taking all the circumstances into consideration, and such figures as were available, he intimated that the directors had decided to pay out of profits a final dividend of 15 per cent. on the ordinary shares, making a total distribution of 25 per cent. for the year, this being the highest return that had been paid in the history of the company, with the exception of the year 1913, when a similar dividend was distributed.

Mr B. Talbot moved, and Mr E. Lloyd Pease seconded, the confirmation of Mr Tom Furness as a director, and Mr E. Lloyd Pease and Mr G. S. Barwick were re-elected directors, Messrs Peat and Co. being re-elected auditors.

The meeting thereupon adjourned.

CARGO FLEET IRON COMPANY, LIMITED.

LORD FURNESS ON CONDITIONS OF THE INDUSTRY.

The adjourned annual meeting (1919) of the above company was held, on the 24th instant, at Middlesbrough. Lord Furness presided.

After an explanation why an adjournment had been necessary, and after a full analysis of the leading figures, he said the profit and loss account, after making adequate provision for estimated liabilities to the Government, showed a gross trading and manufacturing profit for the year of £215,940, against £193,766 for the previous year. The increase in the profit was due entirely to the fact that the excess profits duty was temporarily reduced to 40 per cent. for the year commencing January 1, 1919. But for this temporary reduction in taxation the actual profit would have been less than that for the preceding year. After adding the amount brought into the accounts from 1918, viz., £47,665, and deducting £43,148 for debenture interest, there remained a disposable balance of £220,458. The dividend of 5 per cent., less income-tax, was paid on December 31, 1919, and this they were now asked to confirm. It was further proposed to appropriate £75,000 for depreciation, being the same amount as was allocated for this purpose in the three preceding years. Finally, it was proposed to augment the general reserve fund by the further sum of £50,000, and to carry forward the balance of £45,458. In view of the uncertain outlook in the iron and steel trade, the directors were convinced that this provision was absolutely essential in the best interests of the company. Proceeding, he went on to give an interesting review on matters of particular interest to their industry.

UNFAIR FOREIGN COMPETITION.

During the last few months there had been, he said, a serious falling off in the demand for steel products, and a consequent increase of unemployment, with increasing signs of the recovery of foreign steelmakers, and of active competition for business, particularly from Luxemburg and the steel works of reconquered Lorraine. There was also the prospect of very serious competition from America, whose actual output of steel increased from 31,301,000 tons in 1913 to 45,061,000 tons in 1917, and whose output for the first five months of the present year was at the rate of 41,863,000 tons per annum. He would be the last to complain about fair competition, but the competition which confronted us at the present time was the reverse of fair. Whilst the British market was open to the world free of any tariff protection, our principal competitors were protected by heavy tariffs against any possible retaliation on our part. Our Continental competitors were able to sell at much lower prices than we were able to do, and they had recently been offering steel joists at £17 per ton delivered at English ports, whereas the ruling price of British manufactures of the same materials was about £24 per ton.

NEED FOR GOVERNMENT ACTION.

He did not know whether the Government proposed to afford protection against such unequal competition, but whether they do so or not, it was evident that economic factors would compel the reduction of costs in this country of coal, iron ore, and other raw materials, as well as of our finished products. Certainly, future outputs would have to be considerably increased, and so reduce costs, if this competition was to be overcome, and if British works were to continue to compete to advantage in the export markets of the world.

PROSPECTS.

The Chairman went on to severely criticise the iniquitous excess profits tax, with an earnest plea that the Government should make an early announcement of their intention to abandon the tax, remarking, in conclusion, that Belgium, France, and Germany would undoubtedly by hard work build up their respective industries; and unless the people of this country were prepared to make equal efforts to those of our late Allies and foemen, no tariff assistance which the Government might provide could prevent the decline of our national industries. However, he had great confidence in the strong common sense of our workpeople as a whole, and felt sure that when the present unrest had subsided and we had returned to more normal conditions, the workers of this country would put forward every effort to re-establish and maintain our former prestige in the world of commerce. As to the prospects, the directors were doing all they could to strengthen the resources of the company, and to carry out to the best advantage the heavy expenditure which was necessary to overtake the arrears of deferred renewals and repairs. As a result, the directors were satisfied that the company would possess a very efficient fighting unit for the commercial warfare that was now before them, and that Cargo Fleet would be able to well hold its own against any other organisations in the Britist steel trade.

The report was adopted and a 5 per cent. dividend for the current year declared.

JOSHUA HOYLE AND SONS, LIMITED.

SPLENDID RESULTS—CAPITAL INCREASED.

The third annual general meeting of Messrs Joshua Hoyle and Sons, Limited, was held, on the 25th instant, at the registered office, India Mills, Bacup, Lieut.-Colonel J. Craven Hoyle, T.D., D.L., the chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the result of the last twelve months' work had been gratifying to the directors, and also, he was sure, pleasing to the shareholders.

As regarded their mills, the return to pre-war conditions was making satisfactory progress, and nearly the whole of the machinery was now running to its full capacity.

During the period under review they had been able to acquire on advantageous terms Tong Mill, Bacup; Derker Mills, Oldham; all the share capital in the Stamford Commercial, Limited, Hurst, Ashton-under-Lyne; Wilding Bros., Preston, and last, but not least, the old-established business of Peter Todd and Co., Limited, Wheelton, near Chorley, which was engaged on specialities of the finer production of cotton goods, and which was equipped with 1,140 looms and 30,000 spindles.

He desired to call attention to the position of Joshua Hoyle and Sons when it ceased to be a private company and its position to-day. In 1917 the firm had 3,100 looms and 91,000 mule and ring spindles. To-day they actually owned nearly 300,000 mule and ring spindles and 9,330 looms, 1,200 being sheeting looms and 4,306 fitted with Dobby, Jacquard, and other motions.

The profit for the year amounted to £289,507, making, with the amount brought forward, a disposable balance of £328,756. The renewals and reserve fund now stood at £360,000, against £140,000 twelve months ago. The item for fixed plant in the balance-sheet, which stood at £340,178, was a purely nominal one, the real value of the properties, on a very conservative basis, being a matter of millions, whilst the stocks held on September 30th, valued at nearly £2,000,000, were also taken on a safe and conservative basis.

Regarding the present situation in the cotton trade, there were various forces operating against the confidence of the buyers over the whole world, not the least being the state of the foreign exchange. The resumption of buying could only be deferred for a period, and the natural demand for goods in the different countries of the world would have to be satisfied. The law of supply and demand would eventually operate, and so adjust matters as would be remunerative to cotton growers and others who handled the raw material, and when that day arrived the world would see higher prices ruling for cotton goods than were now quoted.

The report was adopted, and resolutions were duly passed authorising the increase of capital from £2,000,000 to £5,000,000 by the creation of 3,000,000 "B" preference shares.

AERATED BREAD COMPANY, LIMITED.

ALL PREVIOUS YEARS' RESULTS SURPASSED.

The 67th ordinary general meeting of the Aerated Bread Company, Limited, was held, on the 22nd inst., at the Cannon street Hotel, London. Mr Charles Edward Cottier (chairman of the company) presided.

The Chairman, in moving the adoption of the report and accounts, said that at the meeting of December, 1918, following the amalgamation of the company's business with that of W. and G. Buszard, Limited, a record year's trading was announced. At the last annual meeting he was able to indicate that that record had been beaten, and he was now able to state that the year under review claimed the distinction of having surpassed all previous years' results. The gross profit on trading amounted to £667,841, an increase of £92,445 over the previous 12 months, while the charges against gross profit, £520,274, showed an increase of £84,769. The net divisible profit thus arrived at, plus the interest on investments, sundry profits and transfer fees, amounted to £165,556, an increase of £13,606 on last year's record. To obtain such improved results had meant very constant and thorough attention to the business, which had become increasingly difficult during the past 12 months. The year had shown, both with regard to the number of customers served and the volume of business done, a very large increase on the previous year's record figures. This had not been secured by virtue of the lessening of competition. They fairly claimed that they were securing an ever-increasing patronage because the directors and management had maintained, as far as possible, high-class yet popular-priced catering, of which this company was the pioneer. The revaluation of the company's properties early in the year disclosed that, instead of the book value at that date of £555,990, these assets were of the value of £1,165,215, and if they added to this figure £98,665, being the additions since the date of the valuation, they had a present value of at least £1,263,880. They had, in fact, a potential and profit-making asset under this heading of £1,263,880, or, say, £534,224 more than was disclosed by the book figure in the balance-sheet, and this without taking anything into account for the company's valuable goodwill. The balance-sheet figures showed that the financial position continued to be a very sound one.

Mr George Harvey (joint managing director), in seconding the resolution, stated that the increase in the number of the company's customers during the past year had run into many millions. He added that there was a very conspicuous tendency for the cost of food to decline—it had been particularly noticeable lately—and he thought this would be of considerable benefit to the company and to the public who were their customers.

The resolution was unanimously carried.

† Rates lowered 1/2% on Jan. 2, 1918, and lowered 1/2% on Feb. 14, 1918, but raised 1/2% on Oct. 6, 1919, and 1/2% on Nov. 6, 1919, and 1% to 5% on April 15, 1920.
‖ Lowered from 3 1/2% to 3% on June 5, 1918, but was raised to 3 1/4% on July 31, 1919, to 3 3/4% on Oct. 6, 1919, to 4 1/2% on Nov. 6, 1919, and 5 1/2% on April 15, 1920.
* Changed from 4 3/4% to 4% on Dec. 27, 1917, and from 4% to 3 1/2% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also.

introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5⅓%, and the six months' rate from 5% to 5⅔%. On March 19, 1920, daily sales of six months' Treasury bills at 5⅓% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Total value of imports of gold.....	4,078,844	Total declared value of ex ports registered in the week	38,500

Messrs Samuel Montagu and Co. write as follows on November 25th :—"Gold : The Bank of England gold reserve against its note issue is £122,329,435, an increase of £357,600 as compared with last week. A fair amount of gold came into the market this week and was taken for New York. The Chancellor of the Exchequer has stated that the Bank of England is prepared to buy gold belonging to the Esthonian Government, for which there is an undisputed title, at 1s below the London price for gold carrying an export licence. New York reports that $17,650,000 in gold has arrived there from London. Some weeks ago the quotation in Bombay for gold rose as high as Rs. 28.1 per tola for ready, and Rs. 28.7 per tola for forward delivery; the latter rate represents a premium of 75 per cent. upon the value of gold, calculated at the present legal tender ratio of the rupee to the sovereign in India—namely, 10 to 1. In these circumstances, it will be observed that, as the free export of gold is allowed, the Mysore mines enjoy a substantial bonus by being able to obtain a premium upon gold. Similarly, South Africa and Australia profit by selling gold to the best market. It must be remembered that the premium is more or less offset by the higher cost of labour and materials in the respective countries. It is easy to understand that mining interests in the United States also are seeking some way in which they too may be recouped for the increased cost of production, seeing that, whilst world exchanges remain in favour of the United States of America, no financial advantage comparable with the gold premium secured by South African producers can accrue to them from exporting elsewhere. According to the *Bombay Times* there is a school which advocates that the legal tender value of the sovereign should be made 20 rupees. This, they declare, will enable the produce of the country to be exported, and bring back prosperity and contentment to India. It would appear, however, that India wants stability of exchange more than anything else. Official alterations of the ratio between the sovereign and the rupee in order to meet temporary difficulties may be unavoidable, but they are certainly very undesirable from the trade point of view. We refer, for instance, to those taken during the war, which had to be made in order to raise the sterling value of the rupee above its intrinsic value, and thus to enable the Government to provide the token currency vital to the transaction of Indian internal trade. Silver : The trend of silver prices this week, until to-day, has been persistently downward. The largest fall took place on the 22nd, 1¼d. The heaviness of this market has been owing to free Continental selling and lack of support from China. Most of the buying has consisted of bear covering, chiefly on Indian account. A rise of 1d took place to-day in response to a natural reaction after a long and heavy fall, and some purchases were made for America, possibly on China account. In our letters during the latter half of June, referring to the outlook of the market after the price of silver fell to 44d on the 15th of that month, we emphasised how precarious the future must be whilst China remained almost the only absorber of the metal. Exchange speculation in that country assisted to rally the price and maintain it round about 52d for some months, but the inevitable has happened since, and a heavy retrograde movement has taken place. The omens cannot yet be read as propitious. The Indian bazaars will probably be little inclined to buy until the effects of the poor monsoon are dissipated. No vigour in the China export trade can be anticipated until world stocks of Eastern and other goods are depleted to such an extent that import merchants can buy with reasonable hope of profit. The amount of demonetised silver likely to be sold by the Continent is a doubtful factor. The quantity has been heavy in the recent slump—it may be scanty on a rise. The possibility of Continental buying on account of European Governments is doubtful. Italy is to coin a nickel lire, and France will obtain issues of nickel-alloy subsidiary coin through her Chambers of Commerce. Her Government is not disposed to alter the material of the national coin, and, meanwhile, may allow subsidiary coinage to remain in abeyance. The trend of prices does not depend upon sentiment—nor to any very great extent upon the Pittman Act, which simply lessens the pressure of supplies; it must be decided by the balance of trade with silver-using countries. If it be in their favour, then confidence will return to the silver market. In this connection, the possibility of a loan by the Chinese Consortium must not be overlooked. The issue is clarified by the position of India as indicated by the course of rupee quotations, which—in view of lower world commodity prices and the unsatisfactory crops—betray uneasiness. Bazaar purchases of silver would only cause further depression in Indian exchange. It is worthy of note that the price of foreign silver in New York yesterday—72 cents—calculated on the basis of the U.S. exchange on June 15th—namely, 394½—the date when the London quotation touched its lowest record for this year—44d—works out at only 40½d per standard ounce. Were it not for the great appreciation of the dollar, doubtless we should ere yet have reached the lowest level of London prices touched this year."

NOTICES.

We are informed that the Swiss Bank Corporation proposes to take over the Banque de Schaffhouse. The board of directors of the two banks have come to an arrangement which is to be subject to the decision of the meeting of shareholders of the latter bank to take place on December 3rd.

The Bankers' Trust Company of Montreal will shortly establish a branch at 53 Cornhill, London, E.C. 3, under the management of Major H. W. Walker, M.C.

The Commercial Banking Company of Sydney, Limited, has opened a branch at Barmedman in the State of New South Wales.

The Standard Bank of South Africa, Limited, announce the opening of a branch at Tweespruit, in the Orange Free State, and also an agency at Ballengeich, near Newcastle, Natal.

The Chartered Bank of India, Australia, and China announce that the Righ Hon. Sir John Newell Jordan, G.C.I.E., K.C.B., K.C.M.G., has been elected a director of the bank.

NATIONAL BANK
OF SOUTH AFRICA, LIMITED
Registered in the Transvaal.

Capital and Reserve - £4,215,000

The Bank will be happy to co-operate with Business Houses wishing to develop their trade with South and East Africa.

OVER 500 BRANCHES
in Africa. Also Branches at Antwerp, Bombay, New York, Port Louis and St. Helena.

Full List of Branches and Particulars sent on application.

LONDON OFFICES :
CIRCUS PLACE, LONDON WALL, E.C. 2

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

With fine open weather still prevailing, good progress has been made with field operations. Lower temperatures, however, were recorded during the past week, with occasional night frosts, but in many parts the young plant is well above the ground, and appears strong and healthy. Threshings of native wheat were on a fair scale, but only moderate quantities were offered here. Millers' requirements, however, are apparently well satisfield at the moment, consequently only a limited demand existed, and while sound milling grades realised the maximum figure of 95s per 504 lbs, inferior descriptions were only saleable at a slight reduction in value. Foreign sorts remain slow, and no change occurred in official quotations. Prices in America and Argentina show a decline on the week. Crop prospects in Australia and the Argentine hold good, though weather conditions are somewhat unfavourable for the coming harvest. Flour trade ruled very quiet, and consumers are apparently holding off in anticipation of a reduction in prices of wheat and flour in the near future. Meanwhile, English G.R. quoted

HEAD OFFICES: LIVERPOOL AND LONDON.
ROYAL
INSURANCE COMPANY, LIMITED.
ALL CLASSES OF INSURANCE EFFECTED.

at 86s per sack ex mill, and imported descriptions range from 81s 9d up to 93s per 280 lbs ex store. Maize declined sharply in sympathy with lower forward offers, and pressure to sell American mixed corn while in slow demand. Plate, ex ship, quoted 46s, and ditto, landed, 48s 6d, African, landed 57s 6d and Gal-Foxanian ditto 51s. On c.i.f. terms prices have been subject to wide fluctuations, but much lower on balance, and a fair business done at the reduced level. Cargoes were quite neglected and nominal. Parcels, November-December, sold 48s 3d, 49s, and 44s 3d, December-January, 49s 6d down to 44s 3d, January-February 49s 6d to 44s 6d per 480 lbs. Barley dull, and prices generally lower. English malting ranges from 75s up to 110s, grinding ditto 60s to 75s, Californian 88s to 95s, per 448 lbs. American malting 66s, landed, No. 4 Canadian-Western, ex ship, 58s per 400 lbs. On c.i.f. terms, only a limited business was effected at lower prices. No. 4 Canada Western, November-December, sold 54s to 50s per 400 lbs. Oats dull and easier. English whites 52s to 56s, black 50s to 52s, grey winter 50s to 52s. Of imported, Plate, f.a.q., 40s 6d, clipped 41s, American 43s, No. 3 Canadian 45s, Norwegian 60s per 320 lbs. In the forward market values were also on a reduced basis and sales occurred in Plate, f.a.q., January-February, at 36s to 33s, and 33s 6d per 320 lbs. Beans dull and weaker. English new 77s to 80s, Springs 90s to 95s per 532 lbs. Chinese horse beans £17 15s per ton, ex store. Peas in poor request, and also easier. English blues 85s to 100s, Dunns 80s to 82s, and Maples 85s to 100s per 504 lbs. Tasmanian blues 24s, Japanese marrowfats, new, 30s cwt. Lentils easier. No. 1 split 45s, No. 2 42s per 100 lbs. Oatmeal quiet, and values continue to sag. Scottish £33 10s to £40, American £33 10s, rolled oats £32 10s, and English £32 to £34 per ton. In the homeward freight markets there was a moderate business in force, mainly to the Continent at lower rates. A number of steamers were taken from the Gulf to Spanish Atlantic ports at 11s per qr, and Spanish Mediterranean, also West Italy at 12s, Northern Range to Lisbon was done from 11s to 10s, and Galveston to Hamburg at 10s per qr. The River Plate market remained dull and easy, and spot tonnage was fixed at 47s 6d up river loading to U.K./Continent, with 45s the current value. Eastern markets dull, and wheat from Karachi paid 55s to 50s, with 45s the nearest now indicated. Australia quiet for new season's loading at 130s to U.K. with options. Danube maize was placed at 40s to Mediterranean. Time charter steady with rather more inquiry, and a steamer obtained 14s for three years Australian trading.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says: The market for iron and steel has not yet settled down to the changed conditions introduced last week by the substantial reductions in prices then announced. Buyers are not satisfied that the declines which have been recognised reflect the limit of the "cuts" which are possible before the season is much older, and are therefore buying very sparingly, booking no forward orders to speak of. On the other hand, producers are standing stiffly by their lists, backed up thereto by the fact that, unless in exceptional cases, the contracts on hand are fairly substantial, and should see them well through the winter. In many relations the output of steel material is no more than sufficient for wants, but it is admitted that this will not hold if those concerned can afford to indefinitely postpone the placing of new business. Shipbuilders are still crying out for ship plates, and their general constructive operations are not unsatisfactory. While builders are very silent as to inquiries for new steamers, the leading firms are managing to at once replace launches with new keels, keeping their slips fully occupied. An enormous and valuable trade is passing through the hands of marine engineers, who are not getting deliveries of material as promptly as desired. One of the most active branches in the West is that of general engineering, which besides has encouraging home and foreign prospects ahead for months to come. There is considerable stir in bar making (iron and steel), but orders are being run off more quickly than they are being placed. Great

"A Hard Nut to Crack"!

Gentlemen,

Between Saturday evening, September 23rd, and Monday September 25th, our premises in Gt. Clowes Street, Broughton, were entered by burglars. They made a most determined attempt to force the safe. The handle was broken to pieces, the spindle badly bent, and an attempt had been made to drive in the lock. We are pleased to inform you that the safe withstood all attacks.

We found the contents intact, and the following message written on the safe:—"A hard nut to crack, this, Mate."

Yours truly,
Secretary and General Manager.

Fire Proof Since 1858. THE *Burglar Proof Since 1858.*

animation continues to be experienced in tube making, black sheet production, bolt and rivet making, wire-rope making, and relative lines. A common measure of complaint is shortage of supplies of pig-iron and hematite, due to several blast furnaces not having yet restarted smelting. This drawback is more and more directing consumers' attention to foreign sources of supply, not only of raw but of semi-finished articles, and in the last week or two merchants have brought in—to the Clyde and Forth—from the Continent close on 4,000 tons of pig-iron (1,923 tons from the United States) and over 10,000 tons of steel sheets, bars, blooms, plates, and girders (from Antwerp), steel bars, plates, scrap steel (from Amsterdam), and steel plates and bars (from Rotterdam). Good trade doing in coals, chiefly on home or inland account. Several steamers have been allowed to sail with cargoes for Scandinavia, but the Controller declines to permit free dealing in that connection until the home market position, as regards stocks, is thoroughly assured.

Our Sheffield correspondent writes: The local trade situation, with a few exceptions, continues to go from bad to worse. To a large extent buying and selling is at a standstill. Plenty of business is believed to be waiting for suitable conditions, but there is a combination of adverse influences to-day which traders are finding it impossible to combat. The most serious of these are the prevailing tightness of money and the state of the exchanges. The financial strain becomes more pronounced every week, and on every hand the payment of accounts has got heavily in arrears. A feeling is abroad that the exchange difficulty in certain European countries has seen its worst, and French people seem confident of an early improvement. The trade in mild steel is also suffering from Belgian competition, both in our home market and some of the overseas countries. Belgian billets at the present exchange can be delivered here at £8 below the home prices. German steel is also being offered in increasing quantity. A large percentage of open-hearth steel plant is standing idle for the want of orders for billets and other semi-steel. Employment in both heavy and light steel is assuming grave proportions. A break in foundry pig-iron prices has come at last, but the concession is only about 5s. per ton at present. A number of blast furnaces are out of action. Foundry iron is still scarce, although consumption is lessening. Depression is spreading in consequence of decreased buying by the British public and a paucity of ordering from abroad. Prices of iron and steel goods continue to fall, and there is a noticeable cheapening of many hardware goods. The demand for large manufacturing fuels is heavy, as users are stocking against the interruption to deliveries by weather. Stocks are quiet, and the same may be said of blast furnace coke. Very little export trade is being done. Production at the mines is appreciably higher than before the strike. Prices current per ton at pits are:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; steam cobbles and nuts, 31s 8d to 32s 2d; blast furnace coke, 65s 9d; branch, 37s 2d to 37s 8d; silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated November 25th, is as follows:—Pig-iron: Very little business for prompt delivery, as foundry iron is scarce. There are, however, plenty of sellers of pig-iron at current prices for forward delivery, but practically no buyers. The fear of competition from other quarters is causing buyers to hold off in anticipation of lower prices. No. 3 and No. 4 foundry pig-iron is unchanged at 225s per ton, and East Coast mixed numbers hematite remains at 260s per ton for home consumption. Manufactured iron and steel: There is a fair inquiry for steel for early delivery, but no forward business at present prices. Steel ship plates, home, £24 10s; steel ship angles, home, £24; iron ship angles, home, £30 15s; iron bars, home, £30; steel rails, home, £25 net. Iron ore: The ore trade is quiet, as supplies are sufficient and the uncertainty as to next year's iron prices is causing buyers to be very cautious.

THE BY-PRODUCTS TRADE.

(FROM OUR CORRESPONDENT.)

There is very little change in tar products, and the prices of pitch are without alteration, although there is a tendency for buyers to hold off the market in anticipation of lower prices. Benzol is scarce, and there are several large inquiries in the market. The price of 90 per cent. is 3s 9d in the North and 4s in the South; pure 4s 4d. Creosote is fairly strong and worth 1s 4d per gallon. Naphthalene unchanged; crude ranging from £15 to £28 per ton. On the other hand, refined is weak, and only small business at £40 per ton. Solvent naphtha 3s; heavy naphtha 3s 4d per gallon. Cresylic acid unchanged at 4s for 95 to 97 per cent., and 4s 8d for 97 to 99 per cent. Carbolic acid weak and almost unsaleable. Crystal 40 per cent., nominally 8d per pound. Home trade in sulphate of ammonia is fairly good, but the demand for export is not so active owing to competition from foreign production.

MANCHESTER, November 25.

We have experienced another depressing week in the market. The lack of stability in raw cotton rates has caused a nervous feeling to prevail, and leading buyers of yarn and cloth have held aloof. There is a little anxiety with regard to financial matters, and in view of the important depreciation in values during the last few months traders are inclined to congratulate themselves that no definite difficulties have so far arisen. There has been a falling off in the turnover in light cloths for India, fewer bids having been received than for several weeks back. The course of exchange has been unfavourable. Discouraging cables have come to hand from China. Very little business has been about for the minor outlets East and West. Home trade buyers have operated with great caution. There is a tendency in most weaving districts to stop more looms. The yarn market has been flat. Organised short time in the American section seems inevitable, as supplies are increasing in first hands. No relief has come round for Egyptian spinners, although the mills are only working four days a week. Some fair lines have again been booked in dyed yarns for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The lack of new orders continues to exert a weakening effect on values throughout the wool textile industry, and although prices have fallen in a drastic fashion during the past few weeks, it does not appear that the bottom has yet been reached. Obviously, supplies

of wool are very much in excess of the trade's requirements, and at the auctions in this country and in the primary markets heavy withdrawals are the order of the day. There is a hand-to-mouth business in wool, tops, and yarns, but it is not large enough to support the market or give any indication of the real level of values. Forced sales continue to be made at prices which are greatly below the cost of production, and this has a demoralising effect all round. Average 64's tops are quoted at about 4s 6d per lb, and 2-48's yarn out of this quality can be bought at anything from 7s 6d to 8s per lb. The piece trade is stagnant, and greatly reduced prices do not attract buyers. All things considered, it does not seem likely that there will be any improvement in general conditions till after the new year.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Every section of the wool market is in a very unsatisfactory position, there being an almost complete absence of activity throughout the entire industry. The London sales closed last week-end in anything but an encouraging way, the pronounced weakness seen at the opening continuing right to the finish. Altogether 112,474 bales were catalogued, and 44,328 were sold, America taking about 1,000 bales. The quantity withdrawn is alone sufficient to show how unsatisfactory the position is at the present time, whilst the 10 to 25 per cent. decline in values indicates that values are distinctly weak. The same tendency is observable in overseas markets, prices having fallen until they are within measurable distance of the 1914 level, on to which many are expecting that even merinos will eventually settle. Crossbreds have been sold at prices distinctly under the appraisement rates paid last season, and the market is in anything but a good mood to absorb a big weight of wool. The cheapness of the raw material may pave the way for a revival of trade, but there is little evidence of any improvement; indeed, things tend to become worse rather than better.

The number of mills running short time in the West Riding is increasing, and where forty hours per week are being worked it is done with the sole object of getting out orders in time to prevent cancellations. The majority of worsted spinners are running only twenty-four hours per week, and the largest woollen manufacturers in the Dewsbury and Huddersfield district are exceedingly slack. Wool values having come down to a much lower basis, there is no doubt that a safer foundation is being laid, but practically all firms are having to struggle with big stocks of pieces, delivery of which has been postponed or the orders cancelled, which means considerable financial loss. A certain section of the trade is still clamouring for further reductions in Government wool limits; but it is a little difficult to understand what lies behind this demand. Doubts are entertained by the majority respecting the ability of the trade to absorb anything like the weight of wool the Government has offered, for at every public auction heavy withdrawals take place. A modification of limits is certainly needed, but to remove them entirely would be ruinous. In the opinion of the best-informed members of the trade, the Ministry of Munitions have pursued a policy which will prevent Colonial growers saying that the British Government forced upon the market huge stocks of wool at low limits, and thereby "slaughtered" prices in Australia and New Zealand. Values in every Colonial selling centre are distinctly below a parity with London, and great credit is due to Sir Arthur Goldfinch for his endeavours to maintain a satisfactory market for the raw material. The question of wool prices is less serious to-day than the fact that heavy stocks of dear piece goods are held. Business would begin to revive in a very short time if traders had free access to the markets of Central and Eastern Europe, and had an assurance that the goods sold there would be paid for in London.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

Although the deliveries from the docks into consumption are considerably heavier this year than last, the demand has not been so large as was anticipated; with the building trade it has shown some improvement over the past month, but it is still disappointing to importers who purchased largely in anticipation, while other industries have been simply buying from hand to mouth waiting for a further decline in value and until the industrial situation is better. Building timbers would have shown a further weakness had not the miners' strike sent up freight rates and hindered for a time the steady flow of timber-laden steamers to our ports, while the congested condition of the timber docks and quays at some of the principal ports of the United Kingdom and delays in securing wagons all have an influence in making the spot prices of timber dearer than they should be. Although we cannot expect Swedish deals landed at £13 to £14 a standard as was the case before the war, the present quotation round about £50 asked by importers appears more than healthy manufacture can afford to pay.

The heavy auction sales held monthly also have a depressing effect on the spot market, and as some of the wood put up is of very indifferent quality poor prices are the result, giving an impression that the market is weaker than really is the case. But the fact remains that stocks of wood are heavy, though not of the favoured sizes, and there are more sellers than buyers. The little f.o.b. business transacted with Sweden for next year's delivery has been done at even higher figures than those ruling at present. These, however, were for special requirements, and next year's basis prices for f.o.w. have yet to be decided. Swedish shippers maintain that owing to high costs of labour and logs they must maintain present fo.b. prices to sell at a fair profit, but importers, on the other hand, claim that these prices are more than British consumers can stand, and will do all they possibly can to bring Swedish shippers' ideas to a more reasonable level. British importers purchase more Swedish timber than all the other countries put together, and with Russia out of the market have been compelled to pay Swedish prices. The further opening up of Finland, Poland, and Latvia next year, and possibly Russia, will have the effect of greatly stimulating competition, as all the latter countries are in need of British money and goods.

The Canadian spruce market shows a little improvement in London from the dull conditions reported a month ago. This material is extensively used in the Lancashire packing case trade, which is suffering from the falling off in demand for soft goods, both for home and export trade.

The only bright spot in the imported wood market is mahogany, which still maintains good prices, though the logs offered, generally, have not been of fine quality and condition. Other foreign furniture woods are not in great request, in sympathy with the dull state of the furniture manufacturing industry.

The native timber trade is quiet also. There is a good demand for best quality ash (which appears to be always wanted), good oak is in fair demand, but stocks of other woods are heavy.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Partly in sympathy with a daily decline in prices in Argentina and America, and in the absence of demand on this side, linseed has slumped very badly in the past few days, Plate on spot falling to the low level of £21 per ton at Hull on Tuesday, with an easy tone still prevailing. Sellers have been strongly in evidence, and bears have had no difficulty in getting all their requirements met. Crushers have not been in the market to any great extent, except for new crop January-February shipment, about £1 in excess of spot values being paid for shipment. Little or nothing has been done in Indian linseed, prices of which are nominally easier and lower in sympathy with the general trend of things.

So far as linseed oil is concerned, the bottom appears to have dropped out of the market altogether. A further heavy decline in values has taken place, £12 per ton in a week, demand being practically non-existent, and second holders anxious to be quit of their holdings. Some actual trading was done last week round £48 10s for spot oil, but the downward plunge became greatly accentuated, especially at Hull, where on Tuesday the closing price for spot and forward delivery to April was no more than £41 10s., which represented a decline of £27 10s since the beginning of the month. In the demoralised state of affairs, it is impossible to say that the downward tendency has ceased, especially having in mind the position of the linseed market and the disinclination of industrial consumers of oil to anticipate their requirements.

Cottonseed has also been subject to the depressing influences, but only to the extent of about 20s per ton. Cottonseed oils had maintained their value fairly well until the middle of this week, when some weakness manifested itself in all classes, technical receding £1 and common edible £3 per ton. Most other vegetable oils are inactive, and quotations nominally unchanged, with the tone of the market easy.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR CORRESPONDENT.)

The hide market was fairly steady in Bermondsey on Thursday, best ox making from 8¼d-9⅜d, heavies being firmer and lights a fraction easier. Horse hides declined 2s each. Heavy calf were firm, but lights dropped 2¼d per lb. Wools were a shade easier. Trading in foreign hides is still lethargic, as tanners are not yet in the market. It is stated, however, that American tanners are again operating in South America, and if this is so it looks as if bottom prices have been reached. Dry hides are selling in small quantities for export, and here and there small blocks have been sold on home account. The American market is cabled as steadier, with best 60-lb packers now offered at 20 cents.

The leather market is still stagnant, and tanners seem to be getting very anxious sellers. Prices seem far from being stabilised, and merchants have therefore no confidence in the position. Low grade bends are now very cheap, and are being used up by shoe manufacturers who are catering for the so-called "cheap" lines of boots and shoes. Upper leathers are dull, and selling only in bargain lots. Dressers are cutting their losses, and appear to be inclined to reconcile themselves to a more normal basis of prices and profit.

The air has been thick with rumour this week regarding purchases of leather for Russia; these appear to have arisen from the fact that Mr Vanderlip, the head of an American syndicate, has just come back with the news that 600 million pounds' worth of goods will be supplied to Russia in exchange for various American products. The deal will, I hear, include 50,000 tons of leather, 25 million pairs of boots, and 150,000 tons of tanning materials. Apparently the business has been lost to this country, and it is to be hoped the arrangements by our own Government—now on the tapis—will soon enable our traders to open up as an outlet, for surplus leather is badly wanted.

Shoe manufacturers are still short of orders, but there is another rumour going the rounds that half a million pairs of Army boots for Poland has been secured by Northamptonshire manufacturers.

BELFAST LINEN.

A report issued by the Belfast linen trade for the week ended November 24th is as follows:—

FLAX.—The Irish markets were larger during the past week than at any time since the season opened, but unfortunately the demand was not equal to the supply, and consequently growers had to store fully half the flax offered. The bulk of the fibre offered this week was of very inferior quality, and only a small proportion brought 35s to 40s per stone, the remainder being sold from 20s to 30s per stone. The reports from Courtrai this week are more encouraging to growers as there is more buying and prices are firmer, especially for the medium end, which we think is due to the threat of stopping exportation from the Continent at December 31, 1920.

YARNS.—If any change, there is somewhat more inquiry and a few orders, principally for good quality warps. The tendency is to a still further reduction in hours and machinery. Provisional notices to this effect have been posted in some mills.

WEAVERS.—More machinery has been stopped this week, and there is no material change in the situation. Manufacturers are hoping there will be some results from the numerous quotations they have made and are making day by day.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, November 26.

General quiet trading conditions again ensued during the week, as consumers continue to restrict their purchases to wants of immediate necessity, while export requirements count for little at the moment. Quite a slump occurred in prices of linseed and also linseed oil, due to much larger offers from the Argentine.

SUGAR.—Market quiet for free parcels, and small transactions include American granulated, at 95s; white Mauritius, 94s; low ditto, 91s; white Mozambique, 94s; crystallised West India, 78s to 82s; and muscovado ditto, 53s to 59s. Business done in Brazilian and also Peruvian 96 per cent., December-January, at 34s to 27s 9d, f.o.b. terms; and Brazilian 80 per cent., December shipment, at 20s, c.f. and i. terms, U.K. American syrup very dull, and good grocery sorts, sold, 30s to 32s; useful dark, 27s. Honey slow of sale.

COFFEE.—A moderate inquiry was experienced from the home trade, but export demand remained quite dormant. Some bold colory Coorg, in auction, sold, 115s; Mysore, 124s 6d; good bold Nairobi, 115s 6d. The market for future delivery developed a dull and easier tone. March, sold, 51s.

COCOA.—Only limited sales resulted this week, the market being largely nominal. Accra, to arrive, November-January, sold, 50s, ex quay terms, Liverpool.

TEA.—During the week, 43,800 packages Indian and 26,600 packages Ceylon were offered, and while a fair demand prevailed for all the finer liquoring descriptions on about former terms, medium and common met a poor reception at again lower values. Stalky kinds in particular were not wanted.

RICE.—Market very flat, as buyers still hold off. Rangoon bran flat. November-December, steamer, sold, £8 per ton. Beans idle.

SPICE.—Pepper market quiet, and rates easier on the week. Fair black Singapore, spot, sold, 5d to 4⅞d; ditto, January-March, steamer, 5d to 4⅞d; Aleppy, spot, sellers, 6¼d; Tellicherry, 6⅜d; white Singapore, spot, 11½d; Muntok, ditto, sold, 1s to 1s 0½d; ditto, January-March, 10d. Zanzibar cloves, spot, sold, 1s 5½d to 1s 6d; pimento, spot, value, 3½d. Tapioca dull. Fair flake, spot, sold, 1⅜d to 2d; ditto, January-March, 19s 6d, to U.K.; fair Penang seed pearl, spot, 23s 6d; small sago, 32s to 35s, as to sample; sago flour, spot, 23s 6d; January-March, 20s. Japanese farina, spot, 27s 6d; January-March, 24s 6d. Desiccated coconut, fine cut, spot, 75s; medium, 78s.

FRUIT.—Only small sales transpired in currants. Pyrgos quoted 77s; Amalia, 82s to 84s; Patras, 85s to 87s; Vostizza, 96s to 103s. A small quantity of Valencia raisins held firmly. Halves, 133s to 136s; quarters, 150s to 155s. Sultanas quiet, steady, and new on spot quoted 138s to 160s; old, 124s to 128s. Figs: New layers, 148s to 154s; pulled, 200s to 215s. Dates in quiet demand, but rates unaltered.

JUTE.—The market developed a dull and depressed state of affairs this week. Native first marks assortment, actuals, new crop, November-December, sold £45, £44; subs, at £39, £38. Daisee No. 2 actuals, ditto, quoted £38; lightning actuals, £30; and ditto, substitutes, £28. Calcutta hessians and also twills remained very dull during the week. 10 oz hessians, spot, 35s; 8 oz, ditto, 30s; A twills, spot, 94s; B, 84s.

HEMP.—The market continued very quiet, and though sellers were not unduly pressing, prices gradually sagged. J grade, October-December quoted £59; January-March, £58 10s; K, October-December, £50; L, £49; and M, £40. New Zealand dull, and fair, October-December, sellers, £51, with high points at £53.

SHELLAC.—Market very quiet, and standard T.N., spot, sold, 510s, 500s; December, 415s to 360s and 380s; with March, 400s to 360s and 385s.

COPRA.—Market rather irregular, with crushers still operating very sparingly. F.M.S. Straits, November-January, London, sold down to £49 10s, then £50 10s, but later at £49 5s; December-February down to £48 10s, then £50, but later at £49. Ceylon quite idle at the moment. Palm kernels unsettled, and December-February, sold, £30 5s to £31 5s, £30 10s.

MENTHOL.—Spot parcels, sold, 28s; to arrive, 18s. Japanese peppermint oil, spot, sellers, 5s 10½d; ditto, to arrive, sales at 4s 7½d to 4s 10½d. Aniseed, spot, 3s 6d. Camphor, slabs, 5s 6d; crude, spot, sold, 2s 8d per lb. Japanese wax, spot, sold, 118s 6d, 117s 6d per cwt.

EGG PRODUCTS.—Market continued dull and generally featureless. Liquid hen yolk, spot, 95s for new season's, and 66s to 70s old, with business in December-February at 85s. Liquid whole egg, spot, 60s per cwt. Dried whole native, 8d; spray, 1s 3d. Albumen, spot, 4s 5d per lb.

RUBBER.—Generally steady during the greater part of the week, but business proceeded quietly. Plantation standard crepe, on spot, sold, 1s 1½d to 1s 1¾d; January-March, 1s 2¼d, 1s 3d; April-June, 1s 3½d to 1s 4d. Smoked ribbed sheet, spot, sold, 1s 0½d to 1s 0⅝d January-March, 1s 2d. Fine hard Para, spot, quoted 1s 4½d.

OILS.—Linseed easier. Spot, net, naked, 46s; January-April, 44s 6d. Rape quiet. Crude, spot, 73s; refined barrels, 82s. Cotton easier. Crude Egyptian, 45s; Bombay, 40s; refined edible, 60s. China wood quiet. Hankow, spot (barrels), 107s; and Hong Kong, spot, 103s. Coconut quiet. Ceylon, spot, 82s; November-January, 78s; Cochin, ditto, 81s 6d. Soya quiet. Oriental, afloat, cases, 53s; barrels, 60s; deodorised, 80s. Japan fish quiet. November-December (cases), 40s. Cod liver quiet. English, spot, 42s. Groundnut quieter. English crushed, naked, spot, 75s; deodorised (barrels), 95s. Turpentine nominal. American, spot, 114s; November-December, 115s; January-April, 116s. Rosin dull. American, grade B, 44s; F, 46s; G, 46s; K, 47s; M, 47s 6d; WW, 49s; French, F/G, 45s 6d; H, 45s 6d; WW, 47s; extra pale, 48s. Petroleum steady. American, spot, 2s 3½d; and waterwhite, 2s 4½d per gallon.

OILSEEDS.—Linseed: Market easier. Calcutta, afloat, sold, £25; November-December quoted £26. Bombay, November-December, £27; Plate, afloat, Hull, sold, £21 10s; November-December, £22 to £22 10s. January-February, new crop, sold, £22 to £24 10s and £23. Rapeseed lower. Toria, November-December, sellers, £31 10s; real bold Ferozepore, £30 10s; brown Cawnpore, £28 10s. Cottonseed quiet. Egyptian, black, November, sold, £15 10s to £14 15s; November-December, £15 to £14 10s. Bombay, spot, Hull, £9 10s; November-December, £10. Gingelly weak. Chinese, November-January, to Continent, £37. Ground-nuts quiet. Coromandel, January-February, £30 per ton.

METALS.—Tin continued irregular and easier until last Tuesday on selling pressure, when cash registered £230 10s; three months' £235 to £234. The tone was rather firmer during the middle of the

Capital and Surplus - $10,000,000.

Member of Federal Reserve System.

week, dealings being active, with cash selling at £231 to £232; three months', £236 to £235. A downward movement characterised Thursday's business, these dates being registered at £230 and £233 respectively. At Friday's meeting values declined under selling pressure, cash fluctuating to £221, and three months' down to £224, while finally done at £225. English ingots, £218 to £219. Copper: The market manifested an easier tendency at the week's commencement, offers being on a fairly liberal scale, while standard, cash, sold at £79 to £78 10s, and three months' down to £79. A steady feeling prevailed until Wednesday, values being without material change, with three months' realising £78 to £79. Little alteration occurred at Thursday's market, early December being sold at £79 to £78 15s, and three months' at £79 10s to £79. At Friday's session cash moved down to £78, middle of February to £78 10s, three months being sold at £79 to £78 10s. Electros, £90 to £91; best selected, £88 to £90. Strong sheets, £144. Lead lower at £28 to £28 17s 6d. Spelter easier at £32 5s to £33 5s. Antimony: Regulus, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185.

TALLOW.—Messrs Colchesters and Woolner write on November 24th as follows:—The tallow market was quiet during the week, and prices were mostly 7s lower to-day. The fall in prices has not yet been sufficient to attract more than trivial orders. At auction to-day 2,308 casks tallow were offered, and 178 were sold. Quotations are:—Australian mutton: Fine, 63s; good to fair, 61s to to 55s; dull to dark, 50s to 40s; hard, 60s. Australian beef: Fine, 65s; good to fair, 60s to 55s; dull to dark, 51s to 40s; sweet, 75s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 60s; and mixed, 43½, c.i.f., London, 58s. The market letter is 5s lower for tallow; 4s for stuff. Town tallow, 50s per cwt. Rough fat per 8 lbs, 2½d to 10½d; melted stuff, 35s per cwt. Quotations are:—Town: 43s net cash, naked, ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 45s to 40s. Bone fat: White, none; pale, 43s; benzine, 40s; melted stuff, 39s, f.o.b.

NATIONAL BANK OF COMMERCE 1839 IN NEW YORK

Government Securities and the Investor

THE present low price of British Government Securities is the natural result of various economic factors which have been operating during and since the war. Such Securities are nevertheless, as hitherto, the best holding for the investor whose first care is for safety of principal and stability of income.

This Company has just prepared a pamphlet, "British Government Securities and the Investor," which gives in some detail the salient characteristics of several of the outstanding Government issues, and the reason why the present seems a wise time for investment. Copies will be sent on request.

£500,000 WOLVERHAMPTON CORPORATION 6 PER CENT. REDEEMABLE STOCK, 1938-1950.

With the sanction of the Ministry of Health.

Authorised by the provisions of the Local Acts of the Corporations, or the Public Health Acts Amendment Act, 1890, the Housing Acts, The Housing Town Planning, etc., Act, 1919, the Regulations made thereunder by the Minister of Health, and loan sanctions under General Statutes.

Price of issue fixed by the Councils of the seven Corporations at £95 10s. per cent,

PAYABLE AS FOLLOWS:—

On Application	£5 0	per cent.
On 14th December, 1920	30 10	,,
On 11th January, 1921	30 0	,,
On 11th February, 1921	30 0	,,
	£95 10	per cent.

Trustees are authorised by the Trustee Act, 1893, to invest funds in any of the above Stocks, unless expressly forbidden by the instrument (if any) creating the Trust.

Full six months' interest will be payable on 1st June, 1921.

In pursuance of Resolutions of the Councils of the Corporations of Bootle, Bournemouth, Ipswich, Northampton, Rotherham, Stoke-on-Trent, and Wolverhampton:

BARCLAYS BANK LIMITED,
54 Lombard Street, E.C.3, and any of its Branches, as Bankers to the Corporations of Ipswich and Wolverhampton,

THE LONDON COUNTY WESTMINSTER AND PARR'S BANK, LIMITED,
41 Lothbury, E.C.2, and any of its Branches, as Bankers to the Corporation of Bootle,

THE NATIONAL PROVINCIAL AND UNION BANK OF ENGLAND, LIMITED,
15 Bishopsgate, E.C.2, and any of its Branches, as Bankers to the Corporations of Bournemouth, Northampton and Stoke-on-Trent,

WILLIAMS DEACON'S BANK, LIMITED,
20 Birchin Lane, E.C.3, and any of its Branches, as Bankers to the Corporation of Rotherham,

are authorised to receive applications for the above-named Stocks.

1. The Stocks will be redeemed at par on 1st December, 1950, unless the same shall have been previously cancelled by purchase in the open market or by agreement with the holders, but each Corporation will have the option of redeeming at par the whole of the outstanding amount of its issue at any time on or after the 1st December, 1938, on giving three calendar months' notice by post to the Stockholders, or by public advertisement.

2. The Stocks will be transferable in the books kept by the respective Registrars, viz., Barclays Bank Limited, 54 Lombard Street, E.C.3, for the Corporations of Ipswich and Wolverhampton, The London County Westminster and Parr's Bank, Ltd., 41 Lothbury, E.C.2, for the Corporation of Bootle, The National Provincial and Union Bank of England, Ltd., 15, Bishopsgate, E.C.2, for the Corporations of Bournemouth, Northampton and Stoke-on-Trent, and Williams Deacon's Bank, Ltd., 20 Birchin Lane, E.C.3, for the Corporation of Rotherham, and transfers may be made at the respective Banks without charge and free of Stamp Duty, personally or by attorney.

3. Dividends on each of the Stocks will be payable half-yearly, *i.e.*, on the 1st day of June and the 1st day of December in each year, and dividend warrants will be transmitted by post unless otherwise desired. The first dividend for a full half-year's interest will be payable on the 1st June, 1921. Instalments may be paid up in full on or after the 14th December, 1920, under discount at the rate of £6 per cent. per annum. In case of default in payment of any amount at its proper date all sums previously paid will be liable to forfeiture.

4. The Ministry of Health requires the Corporations to make annual provision for the ultimate redemption of the debt created by this issue by means of Sinking Funds and to furnish annual returns showing the position of their Loan Accounts.

5. Each Stock—and the interest thereon—is secured separately upon its own Corporation Funds and Revenues.

6. The rateable values of the Corporations for all purposes and the total outstanding debts are as under:—

BOOTLE CORPORATION—
Population (estimated) 81,500
Rateable value £499,154
Total outstanding debt is £455,077
of which £253,733 is in respect of reproductive undertakings.
A rate of one penny in the pound will produce £2,000.

BOURNEMOUTH CORPORATION—
Population (estimated) 92,000
Rateable value £806,298
Total outstanding debt is £876,470
of which £248,062 will be repaid out of the proceeds of this issue and of which £368,054 is in respect of reproductive undertakings.
A rate of one penny in the pound will produce £3,225.

IPSWICH CORPORATION—
Population (estimated) 81,264
Rateable value £365,328
Total outstanding debt is £741,166
of which £415,914 is in respect of reproductive undertakings.
A rate of one penny in the pound will produce £1,375.

NORTHAMPTON CORPORATION—
Population (estimated) 92,653
Rateable value £424,121
Total outstanding debt is £847,820
of which £110,304 will be repaid out of the proceeds of this issue and of which £474,737 is in respect of reproductive undertakings.
A rate of one penny in the pound will produce £1,658.

ROTHERHAM CORPORATION—
Population (estimated) 72,837
Rateable value £334,550
Total outstanding debt is £1,998,896
of which £200,000 will be repaid out of the proceeds of this issue and of which £1,600,805 is in respect of reproductive undertakings.
A rate of one penny in the pound will produce £1,250.

STOKE-ON-TRENT CORPORATION—
Population (estimated) 249,000
Rateable value £894,697
Total outstanding debt is £1,166,369
of which £200,000 will be repaid out of the proceeds of this issue and of which £444,664 is in respect of reproductive undertakings.
A rate of one penny in the pound will produce £3,447.

WOLVERHAMPTON CORPORATION—
Population (estimated) 96,396
Rateable value £503,690
Total outstanding debt is £1,416,923
of which £932,254 is in respect of reproductive undertakings.
A rate of one penny in the pound will produce £1,863.

The amount which may be levied by the rate is in each case unlimited.

7. The proceeds of the present issues of Stocks will be applied for Housing and other purposes.

8. The issuing Banks will receive applications for any of the Stocks at their Head Offices or any of their Branches.

9. A commission of one-quarter per cent. will be allowed to Bankers and Brokers on allotments made in respect of applications bearing their stamp.

10. Quotations on the London Stock Exchange will be applied for in due course.

11. Copies of full Prospectus and the Forms of Application may be obtained by applying to Barclays Bank Limited, 54 Lombard Street, E.C.3; The London County Westminster and Parr's Bank, Limited, 41 Lothbury, E.C.2; The National Provincial and Union Bank of England, Limited, 15, Bishopsgate, E.C.2; Williams Deacon's Bank, Limited, 20 Birchin Lane, E.C.3; or any of the Branches of each of these Banks; Messrs. Mullens, Marshall, Steer, Lawford & Co., 13 George Street, Mansion House, E.C.4; Messrs. R. Nivison & Co., Bank Buildings, Princes Street, E.C.2; Messrs. J. & A. Scrimgeour, 51 Threadneedle Street, E.C.2; and at the offices of the respective Corporations.

25th November, 1920.

THIS FORM MAY BE USED.

I/We enclose the required deposit of £.....being £5 per cent. on the nominal amount applied for.

PLEASE WRITE DISTINCTLY.

Ordinary Signature.....
Full Name.....
(State whether Mrs. or Miss, and Title, if any.)
Address.....
.....

25th November, 1920.

The required Form must be filled up and sent to Barclays Bank Limited, 54 Lombard Street, E.C.3, or the London County Westminster and Parr's Bank, Limited, 41 Lothbury, E.C.2, or the National Provincial and Union Bank of England, Limited, 15 Bishopsgate, E.C.2, or Williams Deacon's Bank, Limited, 20 Birchin Lane, E.C.3, or any of their respective Branches, with a cheque payable to Bearer for the amount of the desposit. Cheques must be crossed, and any alteration from "Order" to "Bearer" must be signed by the drawer.

No application must be for less than £50, and all applications must be in multiples of £50.

A Copy of this Prospectus has been filed with the Registrar of Joint Stock Companies.

The SUBSCRIPTION LIST will OPEN on the 22nd NOVEMBER, 1920, and will CLOSE on or before the 29th NOVEMBER, 1920.

Applications from Shareholders, Employees, and Customers of the Company will receive special consideration.

Application will be made to the Committee of the Stock Exchange for special permission to deal in the Stock when issued.

HADFIELDS LIMITED.

(Incorporated under the Companies Acts, 1862 to 1886.)

SHARE CAPITAL - - £2,500,000

DIVIDED INTO

30,000 4½ per cent. Cumulative Preference Shares of £10 each ...	**£300,000**
AND	
2,200,000 Ordinary Shares of £1 each	**£2,200,000**
	£2,500,000

OF WHICH THE FOLLOWING HAVE BEEN ISSUED AND ARE FULLY-PAID:

30,000 4½ PER CENT. CUMULATIVE PREFERENCE SHARES OF £10 EACH	**£300,000**
AND	
1,845,034 ORDINARY SHARES OF £1 EACH	**£1,845,034**
	£2,145,034

ISSUE OF

£1,000,000 7½ per Cent. Ten-Year First Mortgage Debenture Stock at 98 per cent., repayable at 102 per cent. on the 1st February, 1931.

Interest payable on the 1st February and 1st August in every year.

WILLIAMS DEACON'S BANK, LIMITED, Sheffield, Manchester, London and Branches, and The LONDON JOINT CITY & MIDLAND BANK, LIMITED, 5, Threadneedle Street, E.C. 3, and Branches, are authorised by the Company to receive applications for the above £1,000,000 7½ per Cent. Ten-Year First Mortgage Debenture Stock at 98 per cent., payable as follows:—

On Application, 10 per cent.; on Allotment, 20 per cent.; on 12th January, 1921, 25 per cent.; on 14th March, 1921, 25 per cent.; on 31st May, 1921, 18 per cent.—98 per cent.

Payment in full may be made on Allotment or on 12th January or 14th March, 1921, and calls paid in advance will carry interest at the full rate of 7½ per cent.

The Stock will be transferable in multiples of £1.

The Debenture Stock is limited to a total issue of £1,000,000, and will be secured by a Trust Deed in favour of Sir Robert Abbott Hadfield, Bart., and B.S.T., Ltd., constituting the Debenture Stock a first specific charge on the Company's Freehold Land and Buildings, Fixed Plant and Machinery, and a floating charge on the undertaking and all other assets of the Company, and will carry interest at the rate of 7½ per cent. per annum, payable 1st February and 1st August, the first half-year's interest being payable on 1st August, 1921, which will be calculated on the amount payable on application and allotment from the date of allotment and on the remaining instalments from the respective due dates of payment thereof.

The Debenture Stock will be repayable on or before the 1st February, 1931, at 102 per cent. By the Trust Deed the Company reserves power to purchase the Debenture Stock at a price not exceeding 102 per cent., plus accrued interest, and to pay off the whole or any part of the Debenture Stock which may be outstanding at any time at 102 per cent. on any date fixed for payment of interest by drawings if necessary on giving six months' notice.

TRUSTEES FOR THE DEBENTURE STOCKHOLDERS.

THE MONEY MARKET.

MONEY was in keen demand up to the end of November, though on the last day of the month borrowers succeeded in supplying themselves without the assistance of the Bank of England. Then came the big addition to credit required for payment of the War Loan interest and the maturing of Exchequer bonds, and once more the Treasury's necessities relieved the market's, at the expense of the Bank of England's position. Discounts were rather easier in tendency, but the keen demand for December bills at or below 5 per cent. was evidence of the reluctance of those who control money to let it out of their sight over the turn of the year. The announcement of the liquidation of an old-established firm in the fur trade called public attention to the very uncomfortable position, long

recognised by those with inside knowledge, which the recent fall in prices has produced among those whose business it is to hold stocks of commodities. Our Index Number, given on a later page, shows another very heavy fall during the past month in wholesale prices, and the whole situation shows that what is needed is caution in deflation rather than the bull in a china shop methods that were not long ago popular in exalted circles. Retail prices still lag behind in the fall, and the best cure for the deadlock in the wholesale market is a retail decline sufficient to attract home and foreign consumers. Last night's *Gazette* shows that half-a-million in gold has been received from Russia.

* * * *

The Bank return gave some indication of the creation of new credit in the increases of 41½ millions in Government securities and 1¼ in Other. The stock of gold was £878,000 higher, but the end of the month demand had caused an increase of £2,517,000 in the note circulation, and so the Reserve was £1,639,000 lower, with its proportion to liabilities at 7.9 per cent. There was thus an increase of 41 millions in the total deposits, over 37 of which went to Other, raising their total to 142½ millions. The Currency Note circulation rose by £1,820,000 to £351,104,300, which includes £2,872,300 for notes called in but not yet cancelled. The fiduciary issue is £300,982,000, that is, £19,618,000 below the maximum.

* * * *

The following table shows Public Income and Expenditure for the week ended November 27, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	15·705	Supply Services	14·044
From Borrowing	·175	Interest on Debt	1·933
From Exchequer Balances	·447	Sundries	·350
	16·327		16·327

These operations increased debt by a sum of £175,000, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Advances from Public Deprts.	+ 11·250	Surrenders of Bonds, &c.	— ·882
Treasury Bills	+ 6·204	Advances by Bank of England	— 16·500
Treasury Bonds	+ ·605	Depreciation Fund	— ·500
		Other Debt	— ·002
	+ 18·059		— 17·884

£600,000 came into the accounts from sales of National Savings Certificates, but a similar sum went out for repayments. Customs and Excise produced £5,679,000, and Excess Profits Duties £3,053,000, while £3,009,034 was contributed to Revenue from Special Receipts under "Miscellaneous." The floating debt was increased by £965,000.

* * * *

There has been another quiet week in the foreign exchange market, with very small movements, according to the post-war standard. The dollar has varied between 48¾ and 49¼, being quoted yesterday morning at about 49. The tendency towards a narrowing of forward quotations continues—1 to 1½ cents over spot for one month (as compared with 1¾ to 2¼ cents a week ago), 2½ to 3½ cents for two months (3¾ to 4¼ cents), and 4½ to 5½ cents for three months (5½ to 6½ cents). Paris, which moved up at the beginning of the week, has recovered slightly, and yesterday stood at about 57.45, almost exactly the same as when we last wrote. The preliminary announcement of the results of the French loan do not suggest that France's financial difficulties have by any means been solved, and industrial troubles following on the recent heavy fall in prices make the outlook serious. The quotation for futures has widened somewhat to 26 to 32 centimes per month below spot as compared with 20 to 25 centimes a week ago. Brussels, on the week, was slightly higher at 54.30, the spread between the French and Belgian rates having in consequence slightly narrowed. Futures at 30 to 35 centimes below spot remain unchanged. It would seem that in Belgium, too, although rather later than elsewhere, the full effect of falling prices on export trade is now being felt. Among neutral exchanges Madrid shows considerable movement, having at 26.77½ more than lost last week's recovery. Internal difficulties and a growing deficit in trade balance fully account for this movement. Switzerland has moved slightly in our favour, Holland some 2½ cents. against us. The quotation for futures on Amsterdam remains at par to 2½ cents. per month over spot. The three Scandinavian exchanges have improved considerably, Stockholm having fallen to 18.00, and Christiania and Copenhagen more than half a kroner each. It is probable that this recovery is due rather to the falling off of imports rather than to any improvement in the export position in any of the three countries. Berlin shows practically no change on the week, but it should be noted that for the first time for a long period there has been a marked contraction in the note circulation. Poland, in view of the chaotic political conditions and fears of a further Bolshevik attack, continues to depreciate, and so, too, does Vienna, in spite of hopes of further assistance from the Allied Powers. There has also been a further sharp fall from 173½ to 180 in the Finnish mark, due probably in part to the return of large holdings of Finnish currency, which can now be sent in again, owing to the removal of exchange restrictions. When once this movement is over Finnish currency should be in a far sounder position. Silver, although it has recovered a little from the lowest figure for the year at the end of November, is still very weak, and shows no sign of strengthening. In sympathy both the Hong Kong and Shanghai rates have fallen heavily, and the rupee at 1s 6d is also considerably lower. The yen at 2s 10½d is very slightly weaker. The Australasian banks are to be congratulated on at last recognising the fact of their position, and altering Australian quotations to figures more in accordance with supply and demand. It will in all probability be some considerable time before an improvement can be expected in the Australian situation.

EVENTS OF THE WEEK.

NOVEMBER 27TH.—Incendiary fires in Liverpool and Bootle. League of Nations arrive at agreement in favour of admission of Austria. French and British Premiers confer. Italian Chamber ratifies Treaty of Rapallo.

NOVEMBER 28TH.—Council of League of Nations approves proposals for despatch of an International force to supervise the Vilna Plebiscite. Seventeen Irish auxiliary police ambushed.

NOVEMBER 29TH.—Mr J. H. Thomas foreshadows struggle for share in railway management. Sugar free from rationing.

NOVEMBER 30TH.—Premier preaches economy at F.B.I. dinner. L.C.C. approves scheme for joint electricity authority for London. Shipyard strike begins. Bomb explosion in the City.

DECEMBER 1ST.—Conference of Manufacturers' Associations and Taxation Committee of the Council of the Association of British Chambers of Commerce submit resolution that the taxable capacity of the country has been exceeded, and demand drastic economies in Government expenditure. Death of Lord Bessborough. President Wilson offers League of Nations personal mediation to end hostilities against Armenia. Government twice defeated in House of Lords on Home Rule Bill.

DECEMBER 2ND.—Debate on Roads Bill. Government Bill for protection of British Dyestuffs introduced. Lord Derby advocates an Anglo-French Alliance.

INDUSTRY AND TAXATION.

SOME very wholesome truths were administered last Tuesday to the Federation of British Industries by the Prime Minister and Sir Robert Horne. The continued existence of the economic system on which our industry has flourished depends very largely on the way in which our manufacturers and merchants face the difficulties that now confront trade in this country and all over the world. The spirit of the wage-earners and of the general public is extremely critical, in view of the great profits that industry has earned at a time of national crisis, and the success with which it resisted the attempt made by the Chancellor of the Exchequer last spring to induce it to disgorge part of them in the interest of the nation's financial position and of industrial peace. The attitude of employers at that time has been a cause of much bitterness among the wage-earners, and a still worse atmosphere is likely to be created, with results which those concerned may deeply regret, if industry gives an impression of now banding itself together to secure itself against foreign competition by a tariff wall, and to keep up the war-time level of prices and of profits. The Federation has a most useful future before it if it devotes itself to its task of organising British trade to meet competition by good management and cheap production, to promote more harmonious relations between labour and capital, and to protest against unscientific taxation, official waste, and Government control of industry. But if it takes to wailing too loud about continental competition, it will put trump cards into the hands of the nationalisers and syndicalisers and others who believe that the present organisers of British industry are greedy, and not too efficient—a belief which the present activity of Protectionists goes far to confirm. It is thus very sincerely to be hoped that the good sense which the Prime Minister pumped into his audience will be inwardly digested. He told them that the present trade depression is world-wide, and largely due to the huge loss involved by the war; he poured timely contempt on the odd people who believe that we can only grow rich by keeping our neighbours poor; laid stress on the need for peace, hard work, and economy, and on the fact that industry must work out its own salvation with the least possible interference by the Government. This statement was greeted with cheers, but there does not seem to have been any applause when Mr Lloyd George went on adroitly to point out that this maxim applies to foreign trade also. Some of our manufacturers, though they are rightly eager to be left alone in the conduct of their own business, when the same doctrine of non-intervention is applied to foreign competitors begin to want a nice, kind, motherly official to take care of them. And so the Prime Minister's statement that though the Government was pledged to deal with key industries, dumping, and the exchange problem, the less it interfered with trade the better, seems to have cast gloom over the proceedings. And when Sir Robert Horne observed that we should not have really better trade until we have a lower level of prices he was greeted with shouts of dissent. How do these sturdy upholders of British enterprise suppose that we can sell goods abroad if we put up barriers against those who want to sell to us, and keep up prices when they are falling elsewhere? Do they really want us to sacrifice our mighty world-wide trade and become a self-contained island?

As to the Prime Minister's promises of drastic economy and a Committee to reduce estimates, of which he is to be himself a member, they would have been more convincing if they had not been an exact echo of a statement made more than a year ago, which was productive chiefly of nothingness. Still, "hope springs eternal," and it is possible that even Mr Lloyd George is at last going to try his hand at economy, and play this difficult game with all the zest that novelty brings with it. On this necessity for drastic economy, and on the evils of the present taxation directly imposed on industry in the shape of E.P.D. and the corporation profits tax, the Federation has a case of overwhelming strength. A Civil Service Supplementary estimate (White Paper 219, price 3d) has been issued this week, involving a sum of £9,403,694. The chief items are Ministry of Labour £3,500,000, War Bonus £2,500,000, Miscellaneous War Services (Foreign Office) £1,629,000, Ministry of Transport £500,016, Public Education, Ireland, £528,600, Ministry of Food £395,000, House Building £200,000, Mines Department of the Board of Trade £73,629, Mercantile Marine Services £150,905. The Mines Department wants £110,251 for salaries and wages before next March 31st. Under the Ministry of Labour, out-of-work donation requires £6,120,000 in addition to the original estimate of £5,500,000, while the contribution to the Unemployment Insurance Fund is to absorb £2,615,000, in place of £1,250,000 as originally estimated. Of the additional sum asked for by the Food Ministry, £318,000 is to go in salaries, wages, allowances, travelling and incidental expenses, largely under the "regional organisation"—and this at a time when it was hoped that the Ministry was slowly dying. The Transport Ministry anticipates a saving of £500,000 on different sub-heads of the original

estimates, but wants £1,000,000 to lend to local authorities for works for the relief of unemployment. Among the additional requirements of the Foreign Office for "miscellaneous war services" are £486,000 for maintenance of Russian refugees, £376,000 for relief of prisoners of war in enemy countries—apparently a repayment of money spent on our behalf by the United States—and £648,500 for "payments under agreements with American meat packers." Supplementary estimates are already far in excess of the £20,000,000 allowed for by Mr Chamberlain in his budget, and Mr Churchill has still to produce his little Mesopotamia bill. No wonder that Ministerial professions of economy are at last ceasing to impress the business community. Criticisms were passed in the House of Commons on Wednesday on some of these items, but in no case was an estimate reduced by one penny.

In its handling of the dyes problem the Government has evidently tried to meet a pledge which obliges them to interfere with trade with the least possible interference. The Dyestuffs (Import Regulation) Bill, which was introduced by the Government on Thursday into the House of Commons, is the direct result of an agreement arrived at between the British makers of dyes and a majority of the dye users. A powerful minority of the dye users, represented by the Calico Printers' Association, is opposed to the policy of restricting by licence the importation of foreign dyes. But the majority of those who use dyestuffs have reconciled themselves to the proposed licensing system, provided that no licence fees are charged or import tariffs set up, and also provided that the dye users have majority representation on the committee which is to advise the Board of Trade in regard to the issue of licences. The Government Bill, which it is expected to pass before Christmas, is designed to prohibit, except under licence, the import of foreign dyes and dyestuffs for ten years, and to vest the power of granting licences in the Board of Trade, advised by a committee of eleven persons. Five of them will represent the users of dyes, and three of them the dye makers. The other three, including the chairman of the committee, will be neutral. Under this arrangement the users of dyes do not get a permanent majority of the advisory committee, but they have five representatives out of eleven, and need only to gain one of the neutral representatives to their side upon any particular question to secure a temporary majority. With such a powerful representation of dye users, there would appear to be little, if any, danger of foreign dyes being kept out to the disadvantage of our great textile dye-using industries. Dyes are being dealt with by themselves in this Bill, partly because of the very specific pledges of protection given to dye makers by the Government, and partly because of the alleged dangers of immediate German competition with the precarious British dye industry. We have dealt with the subject recently, and need not discuss it again now. The system of protection by licence adopted in the Bill seems to be as little harmful as such a system can be. There are no tariffs or licence fees, except fees to cover cost of administration, charged upon imported foreign dyes, and the dye users are so strongly represented upon the Advisory Committee that their very robust interests cannot easily be sacrificed to the infantile ailments of the dye makers.

OUR INDEX NUMBER.

Although retail prices and the official percentage of the cost of living continue to show a peculiarly independent tendency, a still more pronounced fall is shown in our Index Number of wholesale prices as at the end of November. Moreover, the decline, though due to a considerable extent to another series of large decreases in the textile group, is general. The total at the end of November works out at 6594, as compared with 7175 at the end of October, and 8352 at the end of March last, the highest point reached. The November total is the lowest since the end of September, 1919, and brings the percentage figure down below 300. Our usual table shows the changes in the total and in the five groups :—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.
Basis (avg. 1901-5) ..	500	300	500	400	500	2200	*100·0*

„ Nov. „	1478	869½	1651	1259½	1336	6594	*299·7*

Last month's decline brings the totals of two of the groups well below the level at the time of the Armistice, as may be seen from the table below, in which the totals at various dates are compared with those at the end of November, 1918, the latter being taken as 100 :—

	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Total.
End Nov., 1918	100	100	100	100	100	100
„ Mar. 1919	100	100	81	94	93	92

„ Nov. 1920	115	111	89	139	96	106

The widest fluctuations have occurred in the textile group, and the narrowest in the secondary foodstuffs group.

During November the majority of wholesale quotations used in compiling our Index Number moved in a downward direction. A few were stationary, and only one moved up slightly. In the first group cereals and flour are all lower, the Royal Commission on Wheat Supplies having issued a revised schedule of prices for foreign wheat, which came into force on Monday. These new rates show a general reduction of 5s per quarter, while flour is reduced by 4s per sack. There was a small reduction in meat quotations. Tea enjoys the distinction of being the one commodity to be quoted higher at the end of November than at the end of October, but it is still considerably below the level of three months ago. The only other movement in the second group is the reduction in sugar prices.

In the textile group cotton quotations lead the way with large declines. American fell nearly 6d, and Egyptian 1s per lb during November, while yarn is 9d lower, and cloth has fallen from 2s 5d to 2s. Wool has also fallen further, owing to the great scarcity of new orders. Silk and flax are unchanged, but hemp and jute fell heavily. Iron and steel quotations have not altered, but as our Middlesbrough correspondent stated last week, buyers are holding off in anticipation of lower prices. The minor metals have all fallen sharply, and copper is now only 30 per cent. above the average for 1901-5. All commodities in the miscellaneous section, with the exception of petroleum and soda crystals, which have not moved, show declines in vary-

ing degree, the most pronounced being in oils, oilseeds, and indigo. In referring to the linseed market last week, our trade correspondent wrote that the bottom had dropped out of the market altogether. "In the demoralised state of affairs, it is impossible to say that the downward tendency has ceased, especially having in mind the position of the linseed market and the disinclination of industrial consumers of oil to anticipate their requirements." Rubber now stands 66 per cent. below the basis figure, *i.e.*, the average for 1901-5.

HOTEL AND RESTAURANT COMPANIES.

THE early days of the war were far from happy ones for the hotel-keeping industry in this country, especially in London, where the bulk of the Government's commandeering activities were concentrated. And even those companies which managed to avoid the confiscation of their premises suffered considerably. The Savoy Hotel Company, for example, which might have been expected to have benefited from the adversity of its neighbours, whose premises were turned into Government offices, was obliged to enter into a scheme of arrangement with its debenture-holders for deferring payment of interest. But the tide turned in 1918, and the wave of extravagance which followed the Armistice brought with it a rich harvest for those companies which had premises ready for occupation. During the past 12 months, moreover, the majority of the commandeered premises have been returned to their owners, and are again doing their legitimate business. Only one company, namely, De Keyser's Royal Hotel, Limited, has finally disappeared from our list as a result of the war. The company was at length successful in its litigation for compensation from the Government for requisition, but has sold its premises on advantageous terms. Creditors are being paid in full, and shareholders are receiving a return of the full amount of their capital subscribed.

All the other companies in London, however, as may be seen from the comparative table which follows, have done very well in their latest financial year :—

Company.	1913-14.		1918-19.		1919-20.	
	Gross Income.	Net Profit.	Trading Profit.	Net Profit.	rading Profit.	Net Profit.

* Trading profit.

As very few of the accounts now show gross income, we have given the trading profits in all cases for the last two years. Net profits are on a much higher level than before the war, and as compared with a year ago, there is a substantial increase in the figures, in spite of rising expenses, with one or two exceptions. The Savoy Hotel Company, whose trading profits were increased by over 50 per cent., anticipated the termination of the suspension period, and out of its trading profit and balance in hand paid £508,336 for provision for redemption of debentures and deferred interest certificates, and part repayment of mortgage, thus reducing the balance of profit and loss account from £293,265 to £11,910. Arrears of preference dividend have since been paid, and £307,800 of the reserve and redemption accounts have been capitalised and distributed as bonus shares. The position of the company is, therefore, far less unsatisfactory than would appear from the figures above. The Carlton, another company which retained its premises throughout the war, also suffered considerably at first. For the year 1914-15 there was a net loss of over £25,000, and for 1915-16 a loss of £14,300. Since the Armistice, however, large profits have been earned. The Ritz Hotel, in which the Carlton Company holds a very large interest, has also done well, and has resumed payment of its sinking funds. The Burlington Hotels show a satisfactory increase in profits. It has disposed of the leases of the Buckingham Palace Hotel to Explosives Trades, Limited, for £75,000, the investment of which brings in "considerably more than the highest profit made in that hotel during the seven years preceding the war." The report of Frederick Hotels was recently referred to in the *Economist* (November 6th, p. 818). The Hotel Great Central was reopened for business on January 1st last, but the claim against the Government has not yet been settled. The necessary repairs and renewals in connection with this building and arrears in respect of the rest of the hotels owned by the company have been carried out, the payment being met out of revenue and reserves for the purpose. At the date of the report of the Gordon Hotels, namely, May 31st last, the Hotel Metropole had not yet been handed back, but it was officially handed back on July 21st. The Hotel Victoria has been reopened, the Grand Hotel is expected to be ready at the end of the year, and the Metropole is now being renovated and re-decorated—a lengthy and costly process after several years of Government occupation. The Hotel Cecil has not yet been able to produce accounts owing to delay in settlement of the compensation claim, but the building has been re-opened. The Piccadilly has had another good year, and the Strand Hotel, one of the few hotel companies to maintain the level of profits throughout the war, shows a further increase. The agreements with the Metropolitan Railway with regard to the Baker Street Hotel have been cancelled, as the scheme has fallen through. Smedley's Hydropathic Company, Matlock, shows a drop in net profits, general expenses having risen from £63,200 to £77,600. The Waldorf shows a substantial increase. Romano's show a heavy drop in net profits, owing to increases in income-tax and expenditure on redecoration, but Holborn and Frascati have nearly doubled net profits, while Shorts also show a substantial increase.

In spite of the general improvement in net profits, there are still some blanks in the dividend list, owing to the fact that arrears of preference dividend, in some cases to a very large amount, have had to be made up :—

	1911–2	1912–3	1913–4	1914–5	1915–6	1916–7	1917–8	1918–9	1919–20

* Free of tax.

The Burlington Hotels had a sufficient balance in hand to wipe off all arrears of preference dividend, *i.e.*, eight and a-half-years, but the directors decided to pay six and a-half-years', and to carry forward the balance. The Carlton Hotel pays six years of preference dividend, and ordinary shareholders receive a dividend and bonus of 15 per cent. after five blank years. The directors of the Frederick Hotels have postponed payment of an ordinary dividend until after the settlement of the claim against the Government in respect of the occupation of the Hotel Great Central. The Gordon Hotels are two years behind with their preference dividend, the directors having decided to carry out certain renovations, while the work of repair after Government occupation was going on. Short's dividend is raised from 10 to 15 per cent., and the distribution on Strand Hotel preferred ordinary shares is again increased, this time by 2½ per cent. The Waldorf has paid 7½ per cent. on account of arrears of preference dividend, and "the directors hope to be in a position to deal with the balance" within the next two years.

We conclude with a table of shares and yields :—

(d) £10 shares.

The general level of yields is fairly high, but not unduly so, in view of the fluctuating nature of the business in which the companies are engaged. The cost of renovation and redecoration is proving a heavy drain for many of the big companies. At the meeting of Gordon Hotels, Limited, at the end of July the chairman remarked that the time was "not an auspicious one for providing more capital," but that "if the monetary position changes in any way for the better we shall most certainly give the question reconsideration." It has now, however, been found necessary to make an issue of £250,000 8 per cent. seven-year notes to meet the cost of "reconditioning, renovating, and redecorating," which is in excess of any payment made by the Government. The prospectus states that "although the Governments have paid some compensation for these hotels during their occupation, the amount has been inadequate compared with the income that would have been earned by the hotels during the period of occupation." We refer to this issue in another column.

ROUMANIA'S FINANCIAL POSITION.

THE population of Old Roumania in 1914 was about 7½ millions, and the National Debt, interior and exterior, Lei 1,750,000, or £70,000,000 at the pre-war exchange, showing a total indebtedness per capita of Lei 230.

To-day the population of Greater Roumania is estimated at 17½ millions, and the National Debt at 25 milliards of lei, showing a liability of Lei 1,400 per capita. The individual's share of the country's debt is therefore approximately six times his pre-war burden, and comparisons with Britain, France, and other belligerent Countries in the war are favourable to the Roumanian.

The present estimated debt of 25 milliards is made up as follows :—

Lei.
- 2 milliards for the withdrawal of notes issued during the German occupation (Banque Générale notes .
- 2 milliards for the withdrawal of kronen notes current in Transylvania, &c.
- ½ milliard for the withdrawal of the rouble currency in Bessarabia.
- 9 milliards that portion of the public debt of Hungary and Russia which falls to the share of the new provinces of Greater Roumania.
- 4½ milliards Consolidated Debt of old Roumania.
- 7 milliards Floating Debt.

The calling in of the above kronen, rouble, and Banque Générale notes is now being carried out, and it is proposed to convert 50 per cent. of these and also 50 per cent. of the National Bank notes into funded debt. If this conversion can be carried out, it should cause a marked improvement in the value of the leu. The currency left in circulation will be about 4½ milliards, or 250 lei per head, which sum compares very favourably with such countries as France with 800 francs per capita at the present time.

The normal revenue before the war for Old Roumania with its population of 7½ millions was 600 millions of lei, and showed a yield of 80 lei per capita. With the same basis of taxation, for a population of 17½ millions the revenue should produce 1,400 millions. However, many taxes have been increased, and new sources of revenue tapped, and the recent budget introduced for 1920-21 shows an estimated yield of 6 milliards.

Details of the budget 1920-21 follow :—

REVENUE.	Millions of Lei.
Direct taxes	461
Indirect taxes	1,901
Stamp duties, &c.	575
State monopolies	1,035
Public Services	1,651
State lands	164
Ministry of Finance	100
Ministry of Industry and Commerce	93
Ministry of Interior	31
Sundry	80
	6,091
Deficit	509
	6,600

EXPENDITURE.	
Ministry of War	900
,, Finance	1,528
,, Public Instruction	656
,, Arts, &c.	131
,, Interior	702
,, Public Works	421
,, Transport	1,163
,, Justice	203
,, Agriculture	116
,, Industry and Commerce	133
,, Foreign Affairs	21
,, Labour	25
Committee of Restoration, &c.	16
Sundry	89
Supplementary and extraordinary credits	496
	6,600

A revenue of 6 milliards represents a contribution of lei 340 per head, *i.e.*, £14 at pre-war exchange of £1 10s at to-day's exchange.

It is possible to criticise adversely the deficit of 509 millions in the present budget, but it must be remembered that large sums are being expended in various ways, such as on the railways and rolling stock, which were left in a deplorable state after the evacuation by Germany. The bad state of the railways and roads, and the serious lack of transport has hampered the recovery of Roumania more than anything, but much work is being carried out, and large quantities of material and rolling stock have been ordered, and are in course of delivery from America, England, and Canada.

Recently certain journals in Bucharest have been advocating the imposition of new taxes, such as tax on war profits and income-tax.

No provision has been made in the Budget for the cost of reconstruction of devastated areas, extension of railways, creation of mercantile marine service, and payment of war damages to civilians, but a supplementary budget will probably be introduced later in the financial year.

Business Notes.

Defence of the Realm Losses.—The fifth and final report of the Defence of the Realm Losses Royal Commission (Cmd. 1044, price 6d) is issued this week. Instituted in 1916, the Commission has held 888 sittings, and reported in respect of 5,979 applications; lump sum payments have been awarded, amounting in the aggregate to £3,763,256, against claims for approximately £6,554,809, and periodical payments at the rate of £1,091,872, against claims for approximately £1,728,235. On August 16th last the functions of the Commission were taken over by the War Compensation Court under the Indemnity Act, 1920.

The First Six Months' Railway Figures.—We have now treated the figures, recently published, of the first six months of the financial year as we did those for January-June, 1920, in the *Economist* of August 21, 1920, and

compared them with the corresponding period of 1919, as shown in Command Paper 815. The result is as below :—

	April-Sept., 1919.	April-Sept., 1920.	Increase 1920 over 1919.	Percentage of Increase.	Proportion of Total Exp'ndit're. April-Sept., 1920.	Proportion of Total Exp'ndit're. Jan.-June, 1920.
RECEIPTS.	£	£	£		%	%
Passenger	61,097,717	63,995,113	2,897,396	4·7	..	..
Goods	41,730,436	70,732,489	29,002,053	69·5	..	..
Total	102,828,153	134,727,602	31,899,449	31·0	..	..
Less for collection, delivery, wagon hire, &c.	4,120,295	5,155,856	1,035,561	25·1	..	..
Total gross receipts	98,707,858	129,571,746	30,863,888	31·3	..	..
EXPENDITURE.						
Way and works	13,515,306	17,840,397	4,325,091	32·0	13·0	11·8

General charges	1,929,489	2,735,601	806,112	42·4	2·4	2·5
Compensation	918,932	1,328,749	409,817	44·6	1·2	1·2
Rates and taxes	3,268,474	4,712,846	1,444,372	44·2	4·3	4·2
Other expenses	905,635	1,242,381	336,746	37·2	..	..
Total	85,557,072	118,819,039	33,261,967	38·9	..	..
Balance	13,160,785	10,752,707	—2,398,079			
Other businesses	Cr 129,558	Dr 505,258	— 634,816			
Net income	13,280,344	10,247,449	—3,032,895			
Government Guarantee—						
Net receipts	25,309,000	25,309,000	..			
Interest on capital	523,600	579,000	55,400			
Total	25,832,600	25,888,000	55,400			
Net Government liability	12,552,256	15,640,551	3,088,295			

The outstanding features would appear to be that, although from August 5th to September 30th—nearly eight weeks—there was an increase over 1919 of 25 per cent. in passenger fares and season tickets, and from September 1st a large increase in workmen's fares, the passenger receipts for the six months increased 4.7 per cent. only. The goods rates had the benefit for the whole period of the increase made last January, and for one month the further advance made on September 1st. These account for the increase of 69.5 per cent. The noteworthy point in the expenditure is that there is less increase now in the traffic expenses than earlier in the year, also in the running expenses, but more in maintenance of way and works and of rolling stock. This is evidence, no doubt, that the cost of material has had a greater influence than the cost of wages. A satisfactory feature of the present table is that the "other businesses" of the railways have begun to pay; the only losing transaction now is canals. The loss of over £100,000 a month on docks, harbours, and wharves has, apparently, been swept away by the increased charges recently sanctioned. The figures for October, issued yesterday, show the serious effects of the coal strike upon revenue, the net Government liability for the month being £4,936,900, as compared with a surplus of £228,500 for September. Passenger receipts fell from £11,121,300 to £8,795,200, and receipts from goods traffic from £15,070,400 to £12,951,700. Total expenditure rose from £20,622,400 in September to £21,389,200 in October.

British Cellulose.—The report of the British Cellulose and Chemical Manufacturing Company for the year ended June 30, 1920, shows that the balance at credit of profit and loss account is £85,007. The loss on the year's operations amounted to £237,739. Referring to "the installation of a large silk plant," the report proceeds to state that "manufacture was only possible on a comparatively small scale." In the prospectus of the company, published on March 1st last, it was stated that "the instalment of plant having an output of three tons of artificial silk a day is expected to begin immediately, and orders will forthwith be placed for additional plant, which by the end of the year will raise the production of artificial silk to a total of nine tons a day." Perhaps His Majesty's Government did not read the prospectus before taking the £1,450,000 preference shares in the company, but our comment on the issue when it appeared in March was: "The directors are men of wide experience, but the company has yet to prove that it can produce artificial silk on a commercial basis." It is possible that Government financial support of the company caused some people to invest in the undertaking who otherwise would never have done so. The balance-sheet is an interesting study in bookkeeping. Total assets amount to £6,790,625.

HARRISONS & CROSFIELD, LIMITED.

ISSUED CAPITAL .... £1,844,986.

1-4, Great Tower Street, London, E.C.3.

With

Branches in Ceylon, F.M.S., India, Dutch East Indies, Canada, Japan, and elsewhere.

Agents and Secretaries for TEA, RUBBER AND OTHER PRODUCE ESTATES AND COMPANIES.

General Consignment and Commission Business undertaken in London & Abroad

Amongst these assets the following items are worthy of notice :—(*a*) Inaugural production expenses at £120,862, (*b*) preliminary expenses at £304,815; (*c*) goodwill, patents, and patent rights, £1,884,678. It should also be noted that the auditors' report reads "subject to provision for depreciation, in our opinion the foregoing balance-sheet is properly drawn up. . . ." These £1 preference shares are now quoted round about 12s 6d. The difference between the statements given in the March prospectus and the results shown in the first report requires a good deal more explanation than is vouchsafed in the latter.

Coal Output.—A further improvement is shown in the figures of coal production for the week ended November 20th, which compares with that of the three previous weeks as follows :—

	Oct. 30.	Nov. 6.	Nov. 13.	Nov. 20.
	Tons.	Tons.	Tons.	Tons.
Northumberland	1,500	31,400	225,000	268,200
Durham	..	89,700	614,900	707,500
Yorkshire	600	145,400	807,300	830,000
Lancashire, Cheshire, and North Wales	500	63,700	452,300	483,800
Derby, Nottingham, and Leicester	100	54,300	603,100	668,100
Stafford, Shropshire, Warwick, Worcester	900	64,700	383,400	400,200
South Wales and Monmouthshire	300	153,300	934,700	1,073,700
Other English districts	100	31,900	111,400	113,100
Scotland	100	121,900	643,500	666,100
Total	4,100	756,300	4,775,600	5,210,700

The best previous output in any week since May 31, 1919, was 4,989,666 tons for the week ended April 24, 1920. An order entitled the Coal (Bunkering and Export) Prices Revocation Order and Direction, 1920, has been issued by the Board of Trade, the effect of which is to free the trade in export coal from all restrictions hitherto imposed affecting prices and conditions of sale. The quantity and description of coal which may be exported or supplied for foreign bunkering remains subject to existing restrictions.

Scheme B Securities.—It was announced in the Press by the National Debt Commissioners, on Wednesday, that the Treasury have decided to exercise the option, under Clause 3 of Scheme B for Regulation of Foreign Exchanges, of returning the following shares and bonds on March 1, 1921, from which date the additional allowance will cease :—Baltimore and Ohio Railroad Common; Chicago, Milwaukee and St Paul Railway 7 per cent. Non-Cum. Pref.; Great Northern Railway (U.S.A.) Iron Ore Certificates; Moline Plow Co. 7 per cent. First Cum. Pref.; United States Steel Corporation Common; Argentine Government 4 per cent. Loan of 1910; Argentine Government 5 per Cent. Irrigation bonds, 1949, First Series; Chilian Government 5 per Cent. Annuities, Series A, B, and C.; Chilian Government 4½ per Cent. Loan of 1885; Chilian Government 4½ per Cent. Loan of 1887; Chilian Government 4½ per Cent. Loan of 1889; Chilian Government 4½ per Cent. Loan of 1893; Japanese Government 4½ per Cent. Sterling Loan, 1925, Second Series; Dominion Iron and Steel Co., Limited, 5 per cent. Cons. Mortgage Bonds, 1939; Manila Electric Railroad and Lighting Corporation 5 per cent. 50-Year First Lien 1953; Steel Co. of Canada 6 per Cent. First Mortgage and Collateral Trust Bonds, 1940.

Security Values. — The monthly valuation of Stock Exchange securities carried out by the *Bankers' Magazine* shows that in November there was a decrease of 1.41 per cent. in the aggregate market value of 387 representative securities. British and Indian Funds declined by 0.48 per cent., Foreign and Colonial Corporation stocks by 2.52 per cent., and American Railway shares by 7.44 per cent. Home Railway preference stocks, on the other hand, rose by 5.06 per cent. According to statistics compiled by the Commercial Bank of London the total valuation of the ordinary stocks and shares of Home Industrial companies, quoted in the commercial and industrial division of the Stock Exchange Official List, was, at the close of the month just ended, £298,909,356. The following table shows how this compares with the valuation at previous dates, and also the amount and number of capital issues by home industrial companies :—

	End Nov., 1913.	End Nov., 1919.	End Oct., 1920.	End Nov., 1920.
Number of securities ..	186	183	219	2 4
Paid up	£78.157,506	£106,372,677	£175 031,036	£181 245,035
Market valuation	£139,879,325	£270,676,293	£319,185,034	£298,909,356
New capital issues	24	36	44	39
Amount offered	£2,792,584	£21,096,567	£14,308,173	£18,926,803

The new issue figures of November, 1919, were swollen by a Lever issue of £4,000,000, an Armstrong Whitworth issue of £3,712,000, and a Direct Fish Supplies issue of £1,980,000. The figures for November, 1920, also includes a Lever issue of £4,500,000.

Cotton Trade Short Time.—At the end of last week the general committee of the Federation of Master Cotton Spinners' Associations met in Manchester and considered the state of trade. Since the middle of October mills using Egyptian cotton have only worked four days a week, the factories being closed on Mondays and Saturdays. After receiving reports from the several districts, the committee decided that a drastic reduction of yarn production in the American spinning section was necessary. A strong recommendation was made to the members that short-time working should be adopted to the extent of 50 per cent. reduction of production each week until further notice, such curtailment to take the form of closing the mills on Monday, Tuesday, and Saturday in each week, and only run eight hours a day on Wednesday, Thursday, and Friday, thus reducing the working hours from 48 to 24 per week. It was decided that the members should vote on this proposal, and the ballot papers had to be returned not later than last Thursday morning. Before a scheme of short-time can be put into operation it is necessary, according to the rules of the Federation, to secure the consent of the owners of 80 per cent. of the spindles in the particular section. It is understood that the result of the ballot would be announced late yesterday (Friday), and it is expected that the necessary percentage of votes would be obtained, as the trade depression is acute, and for several weeks spinners have only been able to dispose of a comparatively small portion of the yarn output, with the result that stocks in first hands have accumulated to a very inconvenient extent. It may be said that firms belonging to the Masters' Federation own about 37,000,000 spindles engaged on American cotton, and about 16,000,000 spindles using Egyptian cotton.

Financial Conditions in Japan.—Money having been abundant since the crisis of last spring, and trade and industry having used the intervening period for readjustment, it was hoped that financial conditions in Japan were on the high road to recovery. Latest advices from Tokyo, however, record a setback in November. The Agricultural and Industrial Savings Bank of Tokyo has been declared insolvent. The bank was a small concern with a capital of 200,000 yen, so that in its own direct results this failure was not very important. Nevertheless, the event caused a revival of nervousness and apprehension. In addition, general market depression was produced by falls in the prices of silver and cotton, the dullness of the foreign sugar market, the slowness of the export trade, and continued bad reports from foreign markets. The silk market at the end of November was still dull in spite of the beginning of purchases of stocks by the Imperial Filature Company. Stock markets are fairly firm. The Bank note circulation amounts to 1,180,000,000 yen, and the advances of the Bank of Japan to 191,000,000 yen. The discount rate remains unchanged, and money at call is quoted at 3.6 per cent.

The New Order in Mexico.—President Obregon was duly inaugurated on Wednesday. Advices received in London indicate that the business outlook is regarded as promising; the country is quiet, and the population is believed to be war-weary and ready to settle to regular work. The question of the oil royalties instituted by President Carranza is to be referred to a Commission. Their legality depends on the interpretation of conflicting clauses of the Constitution of 1918, and they have called forth a formal British protest, and constitute the chief danger in the relations of Mexico with the United States. Strikes are reported in Vera Cruz and elsewhere, promoted, according to the New York Press, by Russian and Italian "Bolshevists"; but these reports may be taken with reserve. There have also been rumours of differences between the Supreme Court (reputed to be Carranzist) and the new Administration, and between de la Huerta and Obregon, and "Radical sympathies" are ascribed to leading supporters of the new Government. But they have evidently been merely trying to reassure all sections of opinion in Mexico. Unfortunately, Senator Harding has been unable to meet the new President, either in Texas or on his way home; but the reports from New York suggest that his policy is "watchful waiting," and that, unlike some Republicans, he desires to give General Obregon's Government a fair chance. Texan feeling is said to be well-disposed to the Mexicans and adverse to American intervention. Germany and Uruguay have recognised the new Government; the United States, in spite of Mr Colley's recent announcement, has not yet done so; but he is stated to have suggested that a Treaty should be formulated by a Commission. On the whole, the outlook is hopeful. Local and labour disturbances may occur, but it must be remembered that we are chiefly dependent on New York for news of them, that they may easily be exaggerated purposely, and that there are people in America—as elsewhere—who will see "Bolshevism" anywhere.

Mesopotamian Oil Rights.—The American Note, summarised in *The Times* of November 27th, is substantially a demand for the open door for traders and prospectors in all mandated territories, irrespective of concessions granted before the war. Though the United States (through the action of Congress) has been precluded from helping to frame the Mandates, the Note contends that they were made possible by the American share in winning the war, and it therefore insists that they shall not confer or confirm any exclusive rights asserted in Mesopotamia by Great Britain and France on the strength of pre-war concessions or otherwise. Whether such rights have legally been cancelled by the war, or by any action during its course on the part of the Porte, is an interesting problem for international jurists, and the position of the United States would obviously be much stronger if that Power had formally joined in the war against Turkey, or had ratified the Treaty of Versailles. Presumably, however, it contemplates the cancellation of all oil rights which may have been acquired hitherto in Mesopotamia by subjects of any Power whatever. And it is fair to remember (as Mr Sydney Brooks notes in Thursday's *Financial Times*) that the American need of oil is increasingly urgent, and that the best foreign fields outside Mexico are in British hands. But it seems utterly unlikely that the British Government will try to mend matters by disposing of its interests in oil properties in the Middle East, as is alleged in a telegram from New York. Its participation in the Anglo-Persian Oil Company, when announced in 1914, was stated to aim at securing a supply of oil fuel for the Navy independent of any future monopolist combine, and its policy has been followed by a Bill introduced last May in Congress, providing for similar, but much more comprehensive, action by the United States Government. Neither Power could afford to let the fuel of its navy be at the mercy of a possible ring of monopolists.

P. and O. Report.—The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30th states that "the cost of overhauling the steamers which were severely knocked about during the war has been very serious, and has materially reduced the result of the year's operations." It is impossible to ascertain how the past year's results compare with those of previous years, for the "net result" is given after making allocations of unstated amounts to depreciation and to the insurance fund. A year ago the figure was disclosed after providing for depreciation and adding £500,000 to reserve, £450,000 to the contingent fund, and £50,000 to the provident good service fund. The table below shows the published figures for the past six years :—

YEAR ENDED SEPTEMBER 30TH.

	1914-15.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.
	£	£	£	£	£	£
Net. revenue..	494,160	780,463	862,456	882,360	1,614,585	..
Reserves, &c..	..	126,000	100,000	100,000	1,000,000	..
"Net result"	494,160	654,463	762,456	782,360	614,585	710,430
Brought forwd.	68,703	78,182	85,329	92,712	91,727	115,230
	562,863	732,645	847,785	875,072	706,312	825,660
Deb. interest..	63,000	63,000	57,143	55,644	55,055	53,054
Preferred div.	152,000	152,000	152,000	152,000	152,000	152,000
Deferred div...	269,681 (15 %)	432,316 (18 %)	545,930 (18 %)	575,701 (18 %)	384,027 (12 %)	508,668 (15 %)
Carried forwd.	78,182	85,329	92,712	91,727	115,230	111,938

The distribution on the deferred stock is raised from 12 to 15 per cent., free of income-tax, and in addition "something in the neighbourhood of £205,000" in deferred stock is to be distributed to stockholders. The justification put forward for this is that "the companies which have become associated with the P. and O. have, so far, contributed very moderate dividends to the P. and O. exchequer, the policy having been to husband their resources. This being the case, there has been an increment in the value of the P. and O. holdings in associated companies which in all cases stand at the purchase price in the books of the company." A year ago approximately £200,000 deferred stock was distributed "owing to an appreciation in value of some of the company's assets." The actual increase in deferred stock proves to have been £190,885. The balance-sheet, which is analysed in a later column, again includes all the assets in one enormous item of £22,593,500. Such astounding brevity makes a balance-sheet a mere farce. It is perhaps only a coincidence that the auditors' certificate is not quite in the customary form, and omits the usual phrase giving an opinion that the balance-sheet is "properly drawn up so as to exhibit a true and correct view of the state of the company's affairs," &c. The report states that a controlling interest has recently been acquired in the General Steam Company. The transaction was completed on November 1st, and is not included in this year's accounts. The tonnage of the company's fleet is given as 566,511 tons, as against 554,013 tons a year ago.

De Beers Report.—The accounts of De Beers Consolidated Mines, Limited, covering the year ended June 30th last, which have been published this week, show marked improvement. Gross revenue was £6,997,900, against £6,257,758 in the previous year. Receipts on diamond account brought in £6,761,840, against £5,849,553, but interest and dividends on investments, "after adjusting reserve and special investments to market prices at June 30, 1920," were £208,109, as compared with £332,563 a year ago. After deducting all charges, the sum carried to appropriation account is £4,264,666, against £3,921,876. Changes in the balance-sheet are analysed in the usual column of this issue. Dividends of 20s per share have been distributed on the £2 10s preference shares, and 60s per share on the deferred shares of £2 10s each, as compared with 40s a year ago. The unappropriated balance carried forward to the current year's accounts is £237,831, against an unappropriated balance brought in of £466,267. The general reserve fund stands at £1,844,059. The fund to redeem the 4½ per cent. Exploration Debentures (which stand at £1,635,495 in the balance-sheet) has been increased to £661,514, while the special reserve for the stability of the diamond trade has been increased from £1,975,325 to £2,357,395. Diamonds unsold are entered at £354,245.

J. and P. Coats.—A further small increase in profits is shown in the report of J. and P. Coats, Limited, for the year ended June 30th last, the total, after placing £35,500 to depreciation, as against £53,000 a year ago, and allowing for excess profits duty and corporation tax, amounting to £4,164,900, as against £3,995,100 for the previous year. The table below gives a summary of results since 1906 :—

Year ended June 30.	Net Profit After Depreciation, &c.	Interest.	Dividends and Bonus.	Pension, Insurance Fund, &c.	To Reserve, &c.
	£	£	£	£	£
1906	2,974,088	36,642	1,972,821	294,629	450,000
1907	3,056,125	19,680	2,206,642	175,963	500,000
1908	2,701,697	19,394	2,193,403	6,588	500,000
1909	2,917,667	19,399	2,427,402	32,522	500,000
1910	3,171 464	19,278	2,448,908	25,000	675,000
1911	3,102,952	19,096	2,453,808	42,500	525,000
1912	2,794,072	..	2,449,183	26,440	500,000
1913	2,903,239	..	2,449,183	..	500,000
1914	2,634,388	..	2,225,803	..	..
1915	2,598,966	..	2,208,347	..	30,000
1916	3,387,395	..	2,210,016	..	100,000
1917	3,360,950	..	2,294,131	..	2,000,000
1918	3,171,796	..	2,289,732	100,000	..
1919	3,995,149	..	2,850,638	400,000	750,000
1920	4,164,894	..	3,161,214	150,000	450,000

Since last year the capital has been reorganised. The £3,000,000 preferred ordinary stock has been converted into 6 per cent. B preference shares, and the ordinary shares, £4,500,000, have been increased to £14,750,000, partly by the capitalisation of reserves. The dividends on the 6 per cent. preference and B preference shares absorb £330,000, and £2,831,200 goes to the ordinary shares, being at the rate of 17½ per cent. A year ago £2,250,600 went to the ordinary shares, equivalent to 40 per cent. The War Contingencies fund is credited with £250,000, marine and fire underwriting account with £150,000, and depreciation of investments account with £200,000. This leaves £903,100, or £403,700 more, to be carried forward. The balance-sheet shows an increase of £3,090,200 in creditors, but the reserve fund of £5,500,000 has been wiped out by the capitalisation mentioned above. Debtors have increased by £1,449,300, stocks by £969,400, cash by £677,500, and advances to subsidiary companies by £3,100,150. The auditors point out that certain assets whose value has been largely affected by war and subsequent conditions remain at book values. Against probable loss on these, however, the war contingencies fund, which, with the latest allocation, will amount to £3,000,000, has been established.

Henry Tate and Sons.—A substantial expansion in trading profits is shown in the report of Henry Tate and Sons for the year ended September 30th last, and as the net amount of income-tax paid was only £11,630, as compared with £50,030 for the previous year, the increase in the amount available for distribution is still larger. In the following table the results for the past four years and for 1913-14 are set out :—

Year Ended September 30	1914.	1916.	1917.	1918.	1919.	1920.
	£	£	£	£	£	£
Trading profit	345,788	217,946	242,561	227,592	239,991	294,251
Deb. int., fees, and inc.-tax	30,832	53,911	68,003	55,886	76,197	38,130
	314,956	164,035	174,558	171,706	163,794	256,121
To reserve	40,000	20,000	20,000	20,000	20,000	20,000
Pref. div.	16,500	16,500	16,500	16,500	16,500	16,500
Ord. div.	250,000 (50 %)	125,000 (25 %)	125,000 (25 %)	125,000 (25 %)	125,000 (12½ %)	175,000 (17½ %)
Balance	8,456	2,535	13,058	10,206	2,294	44,621

It will be seen that although profits have risen considerably since 1916, they are still well below the pre-war figure. In 1914-15 trading profit fell to £167,000. During the year 1918-19 the ordinary capital was doubled, and the rate of dividend fell from 25 to 12½ per cent. For the past year it has been increased to 17½ per cent., and after transferring £20,000 to reserve, the balance forward is increased by £44,600 to £95,500. The balance-sheet shows an increase of £1,280,900 in creditors, and of £1,119,500 in stocks of sugar, the latter now standing at £1,795,400, as compared with £400,200 at September 30, 1914.

Amalgamated Cotton Mills Trust.—The second annua report of the Amalgamated Cotton Mills Trust, covering the year ended October 30th last, shows net profits of £778,589, against £114,417 for the first year of working. At October 31, 1919, the issued capital of the company was £1,000,000. It is now £7,250,000, three new issues having been made since the issue of the previous report as follows:—(1) In December, 1919, 1,300,000 ordinary shares of £1 each at £3 per share; (2) in April, 1920, 2,250,000 ordinary shares of £1 each, issued as fully paid to the existing ordinary shareholders in the proportion of three for two held, representing a distribution in respect of the premiums received on the above issue of ordinary shares; (3) in May, 1920, 1,800,000 7½ per cent. "B" preference shares of £1 each at par, and 900,000 ordinary shares of £1 each at 25s per share. The balance-sheet, which is analysed in the usual column, shows a bank overdraft which (after deducting cash in hand) amounts to £197,734, but "premiums on shares, after deducting bonus shares and balance of preliminary and new issue expenses," stands at over £458,000. In a speech on March 30th, Lord Fairfax, the chairman of the company, said: "The cotton trade is, and is likely to remain, extremely prosperous for many years to come." This suggests that in deciding upon the bonus issue of 2,250,000 ordinary shares the directors did not foresee the extent of the fall in values and slackening of trade which have since occurred. Had they done so prudence might perhaps have dictated a more conservative treatment of the premiums of the December share issue, in the direction either of establishing a more powerful reserve or of writing down the value of investments in cotton mills. The ordinary shares of the Trust are now quoted at about 19s 3d. In March last an interim dividend of 3s per share was paid on the 1,500,000 ordinary shares existing at that date, and now a final dividend of 1s 6d per share is recommended on the 4,650,000 ordinary shares now issued. It should be pointed out that the full advantage of the profits of all the subsidiary companies did not accrue last year. Profits, for instance, of Horrockses, Crewdson and Co. were only available from January 20th, while the Wardle Cotton Company was only acquired just before the close of the financial year. Under the heading of "profit-sharing for employees," the report contains the following paragraph:—"The boards of the various companies have, with the approval of the directors of this company, made arrangements to receive loan money from the employees up to a maximum of £250 per employee, at a rate of interest equivalent to the ordinary dividends paid by this company, provided such deposit shall have been with the company for a full year, with a minimum rate of 5 per cent. per annum, free of income-tax." On the debit side of the balance-sheet is entered "loans and accrued interest," £218,934.

Baldwins, Limited, and Messrs Sperling and Co.—A circular issued this week by the directors of Baldwins, Limited, states that an offer in the nature of damages, acceptance of which they recommend, has been received from Messrs Sperling and Co. It may be recalled that the latter, as agents for the Northumberland Shipping Company, made an offer for the purchase of the ordinary capital of Baldwins, to be completed on June 30th last. Before that date, however, although the necessary number of shareholders had accepted the offer, the contract was not fulfilled. Later on litigation was entered into, Baldwins demanding "specific performance of the agreement." The offer now being made is 5s per share in cash to each shareholder who assented on or before April 15th last, and is open until December 29th next. The amount required will be provided by the Northumberland Shipping Company, and a sum of £845,000 has been placed with Lloyds Bank to cover the amount, the costs of litigation, and the costs payable under the original agreement. The offer was accompanied by a proposal that Baldwins should enter into a contract with the Northumberland Shipping Company for a supply of steel.

THE AGENT-GENERAL for Tasmania, Mr A. H. Ashbolt, will read a paper before the Royal Society of Arts (Colonial Section) on Tuesday afternoon, December 7th, on "The Trade of Australia During and After the War." The chair will be taken at 4.30 by the Rt. Hon. Sir William Ellison-Macartney, Governor of Tasmania, 1913-17; Governor of Western Australia, 1917-20.

Oversea Correspondence.

UNITED STATES.—MONEY BECOMING EASIER—HEAVY LIQUIDATION AND DECLINES IN STOCK AND COMMODITY MARKETS—BONDS LESS ACTIVE—FURTHER SLACKENING IN TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 19.

ONE of the most important developments here is the relaxation of money. On the Stock Exchange this week call loan rates dropped to 6 per cent. for the first time in a month, and funds were in liberal supply at that figure. But of greater significance is the fact that offerings of time money were larger than for many months past. It would be more accurate to say that banks, in sharp contrast to their attitude for several months, are now willing to make new loans for fixed periods. One national bank, for instance, offered between $3,000,000 and $4,000,000 this week at 8¼ per cent., while some money was offered on all-industrial collateral for 90 days as low as 8 per cent. Borrowers, however, are not particularly anxious to get loans for fixed dates at those high rates, while call money is obtainable at much lower figures. At some places throughout the country money is decidedly easier, and funds from such points are flowing to this centre to take advantage of the higher rates now prevailing here. Furthermore, the general banking position has lately shown some improvement, and there are indications that the peak of the crop-moving demands has been passed. Last Saturday's statement for the entire Federal Reserve system showed at least some lightening of the heavy burden which the banks have been carrying. About a fortnight ago the total loan account and note circulation of the twelve central reserve banks reached the highest point in their history. Last week, however, they reduced their loans by nearly $54,000,000, and their outstanding notes by more than $35,000,000; their ratio of cash reserve to note and deposit liabilities now stands at 43⅝ per cent. This represents only a fractional gain over the preceding week, and compares with the low point of 42½ per cent. touched last May; but it is, nevertheless, the highest ratio reported since October 1st. The fact is worth noting that after the very heavy strain of recent months the banks are now in a stronger position than they were last spring. While time money is still quoted at the same levels which have prevailed for many weeks, some relaxation in rates is confidently expected in the near future. Commercial paper displays an easier tendency, prime names generally being discounted at 8 per cent., and exceptionally choice paper at 7¾ per cent. In addition to the factors mentioned, the heavy liquidation in stock and commodity markets has also contributed to the easier tone in money.

Weakness which has characterised the stock market ever since the national election, with the exception of some temporary rallies, became more pronounced this week,

when violent declines carried many industrial shares to new low records for the year. Various issues suffered repeated losses of 2 to 5 or more points in each session for the past three or four days, while some stocks at times broke 10 to 15 points. The heaviest declines occurred in steel, oil, shipping, rubber, railway equipment, and so-called food stocks. Aggressive "bear raids" accounted for much of the selling pressure, and there is reason to believe that a very extensive short interest has been created. At the same time there has been heavy unloading of long commitments, which revealed a much larger speculative account than was supposed to exist. This week's drastic declines reflected further price reductions in merchandise and commodities, increased curtailment at textile and other manufacturing centres, and greater depression than heretofore in trade and industry generally. Reductions in the dividend rates of the Ajax Rubber Company and the Cuban-American Sugar Company to a 4 per cent. basis, from a 6 and 7 per cent. annual basis respectively, and the suspension of dividends by the American International Corporation, served to emphasise the difficulties which industrial and commercial enterprises are experiencing. The American International's action in passing its dividend was due to "the exceptional circumstances and requirements at this time," which was taken to mean that the corporation deemed it advisable to conserve its cash resources in order to be in a position to protect and, if necessary, assist South American customers of its subsidiaries. As usually happens in periods of heavy liquidation and violent declines in the stock market, vague rumours are being circulated that some mercantile and other concerns in different lines are hard pressed, and are being "tided over" by banks. Some of these rumours are probably well founded; but leading bankers declare emphatically that the general financial situation is "fundamentally sound." Several of our most prominent financiers said this week that individually they knew of no "sore spots." They expressed confidence in the future, and looked for easier money conditions, but intimated that further liquidation of securities and commodities might take place. In the recent severe slump, railroad shares also declined, but to a less extent than industrials. Bonds are less active than heretofore, and reflect scattered realising, apparently to protect stock market commitments. While prices of many issues have suffered somewhat from such forced selling, the general undertone of the bond market continues firm. There is a lull at present in offerings of new securities. A great deal of financing remains to be accomplished, both domestic and foreign, but is probably being postponed in expectation that easier money conditions may enable borrowers to get more favourable terms than have lately prevailed.

Retail trade is more active, especially in apparel lines, demand for which has been stimulated by colder weather, but at the expense of values. On the other hand, short-time schedules and shutdowns have increased at manufacturing centres, notably in the cotton textile industry. Owing to new low levels for raw cotton, wholesale prices of cotton goods have been further reduced in many lines, without, however, attracting buyers. The extent of the curtailment of production by cotton goods manufacturers is indicated by the fact that cotton consumption in October was the smallest for any month since August, 1914. Jobbers are beginning to pick up imported linens, which are now being offered in this market at prices below those prevailing in Belfast. A little more activity is shown in the clothing manufacturing trade, following reductions of 30 to 40 per cent. on lines for next spring. Price recessions and curtailment of production are still going on in iron, steel, and kindred trades, as well as in the copper industry, and reports from various sections of the country show that the number of workers unemployed is rapidly increasing. Grain markets have declined sharply, corn and oats reaching the lowest November levels in five years. In this connection it is interesting to note that Bradstreet's weekly food price index of wholesale prices fell this week below $4.00 for the first time since August, 1917. The declines in wholesale prices, however, have not yet been fully reflected in retail quotations, and this is also the case in many other lines.

FRANCE.—THE NEW LOAN—THE RAILWAY POSITION—SCHEMES OF REORGANISATION—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, November 30.

THE new 6 per cent. loan, the subscriptions for which closed to-night, after having been opened for six weeks, is believed in official circles to have resulted in an unparalleled success. The actual figures will not, of course, be known for some days yet, but there is little doubt the total will far exceed that of any previous French loan. Estimates mentioned to-day among bankers ranged from 40 to 60 milliards, and were alleged to be based on calculations arrived at from certain known results. M. François-Marsal, the Finance Minister, is reported (although the statement should be taken, of course, with all reserve) to have predicted some weeks ago, when the lists were opened, that it would produce 40 milliards. What is known is that (largely, no doubt, in view of the fact that the Government had offered to pay 5·75 per cent. interest on all subscriptions received before the lists opened) over 3,000,000,000f had been received by the end of October. The success of the loan has undoubtedly been considerably helped by the resolve of the French trading world, under the auspices of the various Chambers of Commerce, to invest the whole of their receipts on Thursday last in the new issue. The result of this effort in Paris will probably not be known before the end of the week, but figures already received from various centres indicate that the sum thus secured is extremely large. The Lyons district alone is stated to have produced a total of over 30,000,000f on the day in question. The total amounts received in connection with the five loans issued since the war began were respectively 13, 10, 10, 22, and over 16 milliards (in round figures).

Now that the Chamber has resolved (in the affirmative) the problem of whether France shall resume diplomatic relations with the Vatican, the way has become clear for consideration of the question of the reorganisation of the French railways, in accordance with the proposals contained in the Government Bill on the subject. The debates on this Bill are expected to cover a large number of sittings, and will turn on the consideration of the best means to bring the French railway system back to a paying basis. In 1913 the year's working of the whole of the lines showed a slight profit balance, but in 1914 this was transformed into a loss of 63,000,000f on the State system alone. During the war the annual deficits were respectively 365,000,000f (1915), 344,000,000f (1916), 503,000,000f (1917), and 1,200,000,000f (1918), while the deficit for 1919 will be at least equal to that of 1918. The deficit for the current year is expected to exceed very seriously that of the two previous years, in spite of large increases in revenue. M. Henri Lorin, one of the deputies for the Gironde, as *rapporteur* for the Public Works Commission of the Chamber, has just presented a report on the Government Railway Bill, which can only be described as an economic document of the highest importance. Dealing with the causes of the heavy loss on the working of the railways, M. Lorin attributes this largely to the enormous increase in working costs since 1913. The charges in respect of *personnel* have more than quadrupled since 1913 (the introduction of the eight-hours' day being a substantial factor in this part of the account), while the average expenditure per employee has increased from 2,400f to 7,466f. Owing to the employment of many young and untrained men, the average degree of professional aptitude, and the amount of work done is considerably less. At the same time, the expenditure on fuel has increased tenfold. The deficit on the present year's working, M. Lorin estimates, will amount to about 1,500 millions for the current year, while he places the probable total deficit on all the lines in the country, at the end of this year, at over 5,000,000,000f.

In order to bring about the financial reorganisation necessary to put the railways on a sound footing, M. Lorin points out that there are two possible methods. One is the acquisition of the whole of the railways and their exploitation by the State; the other is to preserve the various companies, but to transform them by unification, and the association of the State in their exploitation. The first of these systems, which approximates to the scheme of

nationalisation put forward by the Confédération National du Travail, and also to that drawn up by M. Loucheur, has been rejected almost unanimously, M. Lorin states, by the Public Works Commission, on the ground that it would be an adventurous and uncalled-for operation. The second method, in the view of the committee, has for its principal characteristics, a compromise and a new form of contract between the railways and the public. The Government proposals, the Commission are of opinion, would create above all, obligatory financial and administrative co-operation between the five great companies and the State system, while it would give France a better exploitation of its railways while guaranteeing the respect of the existing contracts (including those representing the interests of the shareholders). A superior railway council would be created, with a view to subordinating private interests of the companies to the general interest. This council, the Bill proposes, shall include representatives of the companies, the working staff, and the users of the railways. Financial organisation, as provided by the Bill, would take the form of the creation of a common fund, by means of which lines showing a profit would come to the rescue of lines on which there was a deficit. In order to ensure better results, and bring about at least a balance of revenue and expenditure, the Bill proposes that premiums shall be drawn from the receipts of each line, before the payment is made to the common fund, and distributed, as a reward for successful working between the *personnel* and the company, two-thirds of the amount so distributed to go to the working staff. The Superior Council proposed by the Bill would consist of 44 members, of whom 18 would be drawn from the boards of directors of the various companies, 6 would be representatives of the working staff (one for each company), and the remaining 24 would represent the general interests of the nation, and would be nominated by decree signed by the Minister of Public Works.

The Bourse has been weak, and, despite temporary indications of hardness, finished with a fresh decline. This is partly due to the large commercial and industrial stocks that have been accumulated in every country, a phenomenon which has been particularly prominent in France. Despite the feeling of depression that undoubtedly reigns, French Government stocks have remained well in demand, the 3 per cents actually rising from 55.10 to 55.80 under the influence of the new loan, about which the wildest rumours are current. Banks are rather stronger than they were, Crédit Lyonnais being quoted at 1,598, as against 1,570, Banque de France at 1,580 after 1,560, Union Parisienne at 1,097 as against 1,080. Railways are somewhat stronger, though not greater in demand, Nord being at 912, as against 900, Orléans at 810, as against 785, and P.L.M. at 735, as against 718. Metros, however, have dropped back from 327 to 312. Electrical undertakings are rather in the cold. Rubber is weak. Metallurgical shares have dropped; to give an illustration, Longwy is back from 1,570 to 1,400, while Chantiers de France have dropped from 552 to 500, and St Nazaire from 1,200 to 1,115. The metal market is generally depressed.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—FACTORY LAW—CREDIT, EXCHANGE, AND BOURSE — DUMPING — PRICE RISES — RESULTS OF INFLATION.

(FROM OUR CORRESPONDENT.)

BERLIN, November 27.

THE Bill providing for a plebiscite in Upper Silesia to decide whether this valuable angle of Prussia shall become a separate State within the Republic has passed through the Reichstag. It will come into force if the plebiscite provided for by the Versailles Treaty yields a majority against annexation to Poland. The Cabinet, exercising its authority under the Industrial Demobilisation law, has issued a decree restricting the right of manufacturers, whose business is going badly, to close their factories or to disperse plant. In future such steps may not be taken without prior notice to the authorities, whereupon experts will rule whether the proposed measures are inevitable or not. Where continuation of work cannot be arranged for, plant, patents, &c., may be taken over by the authorities, or transferred to a third person. This decree has come too late to prevent the dispersion of much valuable plant, part of which has been exported. In particular, brick-kilns, of which only 1,200 out of 18,000 are being worked, have been broken up, and the material used for other purposes.

The Reichsbank report for the week ending November 15th is relatively favourable. The total of public monies held increased during the week by 3,405,500,000m to 16,697,900,000m, as against an increase on the other side of 2,736,700,000m to 52,801,900,000m. The currency in circulation declined by 755,200,000m, the note circulation having fallen by 495,200,000m to 63,104,900,000m, and the Kassenschein circulation by 260,000,000m to 12,646,100,000m. The last weeks have shown a considerable decline in the immediate inflation, but potentially the inflation may be considered as going ahead at full speed, as no means except the discounting of Treasury bills has yet been devised for covering the deficits in current State expenditure. The improved weekly reports merely register variations in business deals. The Reichsbank has issued a declaration condemning Federal financial policy. The present great levies on capital, says the Bank, ought to be got in quickly; but after that, "tax legislation should as quickly as possible be amended, in such direction that capital will again be able to move freely, without its every step being watched for taxation purposes." This declaration is made in connection with plans, already reported from here, to organise State credit for industry. In this matter the Reichsbank warns against providing credit with the aid of "new means," *i.e.*, methods which increase the inflation. Ten milliards of paper money, says the Bank, are being hoarded with the aim of tax evasion, and for this the Government's tax policy is responsible. The *Reichswirtschaftsrat* has now taken this matter up.

The foreign exchanges during the week continued to fall. Sterling dropped from 256 to 241, the dollar from 73 to 69, the French franc from 477 to 422, and the Swiss franc from 1,153 to 1,080. Compared with past weeks, these

changes are small, and the Bourse re-acted accordingly, and on the whole was undecided or irregular, with sharp rises for individual industrial stocks, declines for others, and towards the end of the week a considerable drop for Federal Loans. The 3 per cent. Reichsanleihe, which reached 72 on Friday (12 points above its price at end of 1919), to-day fell to 69.50, the cause being foreign speculative sales, and the 3½ per cent. fell from 59.25 to 58.80. The chief Federal Loan, the 5 per cent. War Loan, remains unchanged at 77.50. Industrial quotations were influenced by fusion announcements and rumours, and by high dividend declarations. Early in the week shipping stocks were affected by stories of new fusions with Herr Stinnes' ever-expanding Rhine-Elbe Union; and there was a further mild boom in oil stocks on the basis of a story of the foundation of a heavily capitalised Dutch company for purpose of absorption of the two chief German petroleum concerns. Later in the week mining and metal stocks were firm. The chief cause was the declaration of a 50 per cent. dividend (against only 6 per cent. last year) by the Baroper Rolling Mill Co. On November 20th the sum quotation of 25 leading industrial, banking and shipping stocks was 14,712, against a low point on June 1st of 8,533, an earlier high point of 12,311 on March 1st, and against 5,424 on September 1, 1919. Ten of the leading industrial stocks now sell at over 1,000. The quotations of all of these are double those of November 26, 1919, and some are up four or five-fold. Judging by the experience of Vienna, where the foreign exchanges are much higher, and where stocks have risen much more than even in Germany, there is no limit to the possible rise of German stocks except a reversal of the general exchange movement; and of this, though temporary sharp set-backs occur, there is no sign.

The foreign agitation against German dumping attracts increased attention. A plan to impose supplementary import duties to compensate for exchange depreciation is reported from Japan. The Press of the former neutral countries is full of reports on dumping. In the Dutch Chamber a speaker described the difficult position of the native diamond, cigar, furniture, wool and cocoa industries, and suggested import prohibitions. In Scandinavia, the anti-dumping movement is complicated by plans (realised in Norway) for partial import prohibitions with the aim of improving the native exchanges. The Danish Government this week refused to adopt recommendations from the two parties in its Exchange Commission recommending respectively partial import prohibitions, and higher import duties. Denmark's foreign payment balance is damaged not so much by excessive general imports, as by reduced exports, high prices of foreign coal, and the greater price rise of imports than of exports. Swedish industrial circles complain directly of dumping. The woollen manufacturers protest against excessive imports from England. The Finance Council, recently established, has advised the Stockholm Government to reject the demand for anti-dumping measures in this branch, on the ground that native woollen goods producers raised prices unduly during the war, and need the corrective of import. Other branches mainly complain against Germany. The Stockholm Iron Institute demands that duties be raised as much as 500 per cent. It mentions that German daily wages are around 4 crowns Swedish currency, as against a Swedish wage of about 16 crowns. The Swedish Electrical Industries Association has also petitioned the Government, stating that German production cost is between two-fifths and two-thirds of Swedish; and another traders' association complains of cheap German freight rates. The *Svensk Dagblad* quotes an expert's figures, showing that German wages are a fourth of Swedish, that Germans pay only 23 Swedish crowns per ton for coal, while Swedes pay 160-180 crowns, and that in general Swedish production cost is four or five times greater than German.

These figures are accurate at present. But cost of production for foreign markets is naturally only a question of the exchanges, and these vary violently from month to month. The former German Finance Minister Gothein, who has advocated the allowing of German prices to rise to world-market levels, as with completely free export and import they would speedily do, shows in the Berlin *Tageblatt* that the main causes of low German production cost are the artificially limited domestic and factory rents, State-subsidised food, and very low railway fares and freight rates. Many vital items in production cost are far lower, in gold, than before the war, this although gold prices in all free markets have risen greatly. Herr Dahlberg, an official of the Import and Export Licensing Bureau, estimates that German production cost is about a third of English. As Germany loses from dumping, although her individual exporters, who charge foreigners more than they charge natives, gain, Herr Dahlberg thinks that prices to English buyers should in future be calculated in gold (the actual payment might be made in any currency at its gold exchange), and he suggests as general basis the pre-war gold price, plus 150 per cent., also in gold. This would make Germany's gold export prices 2½ times as high as in 1914, which would roughly bring them to world-market levels.

The German State system of checking unprofitable dumping so far pursued has been unsuccessful. The "Aussenhandelsstellen" (Foreign Trade Boards) have in principle refused to sanction exporting at prices materially below those of world-markets. The prices of each export deal are considered in the light of the exchange of the day. But the Trade Boards, overridden by the Reichswirtschafts-Ministry, and retarded by a needlessly involved procedure, work slowly; and the exchanges (not to mention the production cost in marks, and the production cost in foreign markets), very rapidly. And so the price-testing mechanism fails. All last summer Germans had great difficulty in exporting; the foreign exchanges had fallen heavily, and the official price-testing mechanism could not keep up with them. In the last few months a contrary movement has taken place; the foreign exchanges have risen, and as export prices have not been equally rapidly adjusted, many Germans are exporting at far below world levels, as they were at the height of the anti-Dumping campaign in December, 1919. How badly the price-testing mechanism works is shown by the fact that only now, when Germans can easily outsell foreigners, have the export duties on iron and mechanical articles been altogether removed. During the summer, when export deals almost ceased, the duties were rigorously enforced. In these conditions there is a very natural agitation among business men against the whole system of export and import price-control.

At present there are indications of a new native price-rise, which as home prices have been fairly stable of late, will introduce an additional complication. The metal trades employees have denounced their wage-agreements, and are demanding a 30 per cent. rise in wages, on the ground of the upward moving living index. The coal corporations have demanded an extra 17.50m per ton. Their last demand, made in the autumn, was refused by the Reichswirtschafts-Ministry, except in the case of brown coal, which was raised 9 marks a ton. Prices of black coal have not been altered since May. A heavy increase in railway fares and rates is impending. An Experts' Commission has unanimously recommended this, suggesting the doubling of prices, as the only way of fighting the present deficit of 16 milliards. Reckoned in gold, German fares and rates are only about a third of those before the war. The Federal Railway Department hopes to save 5 milliards by scraping and paring, one measure being the discharge of useless workmen, whose annual wages total 1½ milliards. So far the Government's system of fixing charges for State services (railways, posts, &c.) has been thoroughly bad. Instead of raising charges in good time, so as to counterbalance the depreciation of money, it has waited until enormous deficits are reported; and has then raised charges half-heartedly, with the result that deficits continue, that more paper money must be printed, and that a new belated and half-hearted rise becomes inevitable. As Germans to-day pay, relatively to their inflated incomes, far less than before the war for rent, food, travelling and postages, there is no reason for this policy. The official justification is that the inflation is temporary, and that when it ceases State expenditure will be reduced; there is, therefore, no use in raising prices enormously in order merely to cut them down again. In fact, however, the deficits which result from this process, being covered by bank-note printing, themselves postpone the return to a normal price-level. Meantime, the benevolent plan to let citizens off easily is not realised; the currency watering unfairly impoverishes some classes, and unfairly enriches others; and pure accident is substituted for a reasoned incidence of public burdens.

CANADA.—THE TARIFF COMMISSION—SITTINGS IN THE MARITIME PROVINCES—VIEWS OF THE FARMERS AND MANUFACTURERS—ARGUMENTS ABOUT THE BRITISH PREFERENCE—BUSINESS AND FINANCIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

MONTREAL, November 19.

THE Tariff Commission has during the past three weeks held sessions at a series of points in the Maritime Provinces and Quebec, and has just concluded the Montreal hearing, which has occupied five days and produced an enormous mass of evidence. Prince Edward Island is an Arcadian community, which relies for its very marked prosperity upon agriculture, fisheries, and a new and very successful industry of farming black foxes. There are some lobster canneries, and a few small industries subsidiary to agriculture, but the manufacturing element has no real strength, and as a result the evidence proffered to the Commission was almost wholly critical of the tariff. At Sydney, Nova Scotia, the representatives of the iron, steel and coal companies, whom Colonel Grant Morden is trying to consolidate under the wing of the British Empire Steel Corporation, were present in full force, and presented to the Commission elaborate verbal and written pleas on behalf of their industries. Elsewhere the manufacturers had usually been content to ask for the maintenance of their existing protection, but the spokesmen of the coal and steel industries of Nova Scotia boldly demanded an increased measure of protection. Some of them told a most doleful story about the condition and prospects of their enterprises, and it is highly doubtful if Colonel Morden would like to see their evidence submitted to the scrutiny of prospective investors in his new corporation. At Halifax a variety of industries presented pleas for continued protection. There was considerable evidence from fish companies and individual fishermen, and they united in the view that the industry was in an unsatisfactory condition. Fishermen stated that they were quite unable to dispose of their catches. At St John and Moncton, in New Brunswick, representatives of cotton, brush, underwear, and other factories urged the continuance of their protection. At these three last points severe criticism of the tariff was offered by the farmers, who are now building up strong organisations in imitation of the Western graingrowers. There, as in Quebec, the main indictment of the farming classes against the tariff is that they cannot afford to pay the wages which urban industries operating under the privileges of the tariff are able to offer, that hundreds of men and women have been attracted from the farms to the factories, causing a serious labour shortage on the former, and that, while high prices have shown an increase in the value of farm production, there is a decline in volume which is dangerous to a country relying for its export trade on its agricultural products. There is abundant evidence that this migration from the country to the towns has reached a serious pitch in recent years.

But at all the sittings in Quebec the protectionist side had a long string of champions. Quebec is the chief boot-making centre in Canada, and there are tanneries, tobacco, and jam factories. At Three Rivers there are two shipyards, two cotton factories, and a varied list of other industries which have been attracted by the cheap power available on the St Maurice and other rivers. Sherbrooke is a thriving manufacturing centre which is full of the branch factories of large American corporations. At the Quebec sessions it was noticeable that the perils of British competition, which the exchange situation has enhanced, were continually insisted on; there were signs of a subtle appeal to the anti-Imperialist sentiment of the French-Canadians. But the usual demand was for the continuance of the existing tariff schedules.

At the Montreal session the manufacturers brought up their heaviest batteries, and most of the major industries presented long and elaborate memorials. Well-known industrial magnates like Sir Charles Gordon, president of the Dominion Textile Company, and Mr F. P. Jones, president of the Canada Cement Company, came to plead the cause of their respective industries. The general trend of their case was that Canadian industry lay under the constant shadow of competition with some of the strongest and most efficient organisations in the world; that the paucity of the population made the market narrow and specialisation costly; that climatic conditions necessitated extra expenses in construction and maintenance; and that a large amount of raw material had to be brought from abroad, and duties had often to be paid on machinery. In view of these handicaps, from most of which American industries were free, adequate protection was necessary if urban industry was to have any prospect of development in Canada. But even in Montreal the anti-protectionist case did not go by default. Apart from the farmers, individual witnesses criticised the tariff and suggested reductions. Mr J. T. McCall, representing the iron and steel merchants, thought many of the schedules affecting his business were too high, and representatives of chocolate firms took a similar line. The Association of British Agents sent a spokesman to suggest an extension of the British preference, and asked for some changes in the administration of the tariff. Professor Archibald McGoun, formerly on the staff of McGill University, submitted an interesting memorial asking for a revenue tariff against British goods, and outlining its advantages. The British preference has been under frequent discussion, and the general impression is that while the exchange situation is helping matters the increase in ocean freight rates has made large inroads on its value. Mr Jones describe it as almost valueless.

It is difficult to give a good report of the general economic situation in Canada. Before the Commission numerous manufacturers either prophesied or threatened that if their tariff protection was cancelled they would be compelled to close their factories. But the sad fact is that with their precious schedules still intact many of them are either closing their establishments or seriously curtailing production. The shipbuilding industry has practically come to a standstill, and the sawmill and lumber business in British Columbia is in a similar condition. In Montreal the delegate of the metal workers told the Commission that 4,000, or about 40 per cent., of the members of their unions in Montreal were out of employment. In the same city there is general unemployment in the clothing business. It is the same in other industrial centres, and every city in Canada has to-day a serious contingent of unemployed. There is a good demand for unskilled labour in the mines and woods of the East, but the urban workers are loath to face the hardships of a Canadian winter in the country. The situation is by no means desperate yet, and luckily many of the workers have accumulated some considerable savings. But it is already plain that Canada will have a serious unemployment problem upon her hands before the winter ends.

Nor is the financial prospect bright. During the past fortnight a wave of liquidation has swept over the Canadian markets, and brought them to the verge of demoralisation. All stocks have suffered, but the chief victims were the sugars. It is generally understood that most of the refineries have suffered enormous losses, and will find great difficulty in pulling through. The common stock of the Atlantic Sugar Refinery Company, which last spring was in demand at 160, has this week been selling at 20 and still lower. Some of the other breaks have been equally spectacular, and even the paper stocks suffered in the general decline. At the time of writing there is a somewhat steadier tone, but there is no sign of any upward movement. All speculative sentiment has vanished. Money is just as tight and hard to get as ever, and the banks are keeping very close and anxious watch upon the situation. The disposal of the crop still provides some problems, but wheat is beginning to move more freely out of the West, and it is believed that the British Government has come quietly into the market as a buyer. The mills of the United States have also helped the situation by making some purchases. There has been a decline in Customs returns, but the sales and luxury taxes are proving fruitful beyond the Finance Minister's expectations, though they are detested by the merchants as damaging to business, and are the theme of constant protests. Next week the Railway Commission will sit to review, at the request of the Government, its award giving the railways a substantial increase in rates.

INDIA.—EXCHANGE—EXPORT POLICY—THE BOMBAY LOAN—TIGHT MONEY.

(BY OUR CORRESPONDENT.)

BOMBAY, November 13.

THE controversy which has raged over the question of Indian exchange since the Government of India announced its decision to withdraw Reverse Councils from sale has now abated. Government has definitely stated, in reply to a query by the Bengal Chamber of Commerce, that these sales are not likely to be resumed. This statement has caused general satisfaction, for although there are panicky commercial interests which would welcome official aid from Simla—or from anywhere else so long as the rupee kept above two shillings—there is a decidedly larger community in India who would look upon further Governmental interference with the utmost concern. The rupee struck the low-water line at 1s 6d, but has during the past fortnight carried itself to 1s 8d. A gradual rise is anticipated in many quarters, although India's commercial and financial house is by no means yet in order. We still suffer from an adverse trade balance; the prospects of both jute and cotton crops are causing concern; exports are still tied, with the exception of wheat, which was recently released, but has not yet found its way on to the foreign or home markets. Anxiety, of course, centres on the export problem, and the local (Bombay) Chamber of Commerce has echoed general trading feelings in asking Government for a clear statement regarding export policy.

The Bombay Loan was a gigantic success, over nine crores of rupees being raised by public subscription. Much of the success of the Loan is attributable to the banks' easily accessible system of advances to subscribers. Money is tight in the city, although there is plenty of it. Everyone realises that these are anxious times. The inauguration of the new Legislative Councils, coupled with a firm stand on the part of the Government in regard to Mr Gandhi's Non-Co-operation programme, will and would clear the air considerably. Despite, however, the tightness of money inquiry for it grows daily, and the Bank of Bombay cash reserve has declined to the extent of Rs 291 lakhs. Government has withdrawn Rs 186 lakhs, and private deposits have decreased by Rs 200 lakhs. Bazaar rates are, in consequence, high; it now costs 15 per cent. per annum to finance ready gold and deliver it in the settlement due a fortnight hence.

Another result of the present money scarcity is to be found in the fact that the promotion of new joint stock companies has for the time being ceased, and great difficulty is being felt in finding the wherewithal to pay up calls of recently floated companies. Quotations for recent issues are in many cases at a discount.

Since the beginning of the month the three Presidency banks have raised their rates, Bombay and Bengal declaring 6 per cent. on the 4th instant, and Madras 7 per cent. on the 9th instant. The cash reserves in these banks at the time of writing are:—Bombay, Rs 14,39,75,435; Bengal, Rs 10,45,000; Madras, Rs 4,69,00,000.

AUSTRIA.—THE NEW AUSTRIAN MINISTRY—NEW REGULATION OF THE TRADE WITH FOREIGN EXCHANGE — NATIONALISATION OF THE BRANCHES OF THE BANKS OF THE FORMER MONARCHY IN THE NEW NATIONAL STATES—ECONOMIC PROSPECTS.

(FROM OUR CORRESPONDENT.)

VIENNA, November 22.

THE new Government was appointed on November 21st. Six experts, or rather officials, and four Christian-Socialists will form the new ministry. Mr Mayr will be Chancellor and Minister for Foreign Affairs, Dr Grimm Minister of Finances, Dr Weisskirchner has been appointed First President of the National Assembly. It is believed that this Ministry will only have to settle the food question of the next few months and to help Austria to pass this winter, while afterwards a new coalition of the great parties will be possible, which may guarantee a systematic reconstruction by the work of all good elements. The former Austrian "Devisenzentrale"—a State institution—has been transformed into a new private association of banks and bankers which is destined to regulate the trade in foreign exchange. It will be its duty to deliver the foreign exchange needed for industrial purposes, to prevent speculation in foreign exchange by private persons, and to establish a clearing office for foreign exchange. Supervision by the Government will be ensured by means of a State commissary.

The branches of the great financial institutions of the old Monarchy, which are situated now on the territory of the new National States, partly have become independent and partly have been joined with national banks or financial institutions of these National States. In the last few weeks the branches of the "Mercurbank," which are situated on Czecho-Slovakian territory, have been changed into a new bank. Together with certain financial groups the "Bohemian Commercial Bank" has been established with fifty millions Czecho-Slovakian crowns capital, paid up. In Poland the branches of this bank have been transformed into the "Commercial Bank Share-holding Company at Krakow." This new Polish bank will have a capital paid up of twenty millions Polish marks.

The financial and economic situation of Austria to-day may be best described as a state of expectancy. Some days after the President of the Reparation Commission left Vienna, the liquidators of the Austrian-Hungarian Bank, with the general secretary of the Liquidation Commission, Mr Barry, departed for Paris; also Mr Rapp, the general secretary of the Austrian-Hungarian Bank has departed for Amsterdam. Information about the conference at the High Council is not to be had. Most of the newspapers, therefore, are gratifying their readers with news one can only describe as pure assumption. The last days of November have brought some little strikes of railwaymen. The strikers want to get more and better provisions, especially more flour and bread. But the majority of railwaymen don't wish to risk a new strike, which may be a danger for transport of foodstuffs for the workers of the great industrial centres, and there is some hope that by means of some little concessions the whole matter will be settled very soon. The cold which has set in on the last days of October continues. In consequence of which there is already a great scarcity of fuel. Peasants are anxious for their winter corn, the cold having brought no snow, which might protect and cover the green corn. Scarcity of coal and fuel is still increasing, as the inner unrest and quarrels of Czecho-Slovakia have had the worst consequences for the delivery of coal, which has been reduced again considerably. If the Reparation Commission will not help there, by enabling some imports of Polish coal, or by giving Austria a part of the German coal originally destined for France, there is serious danger for all Austrian industries and railways.

SWEDEN.—END OF BUILDING STRIKE—BUSINESS CONDITIONS—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, November 28.

LAST week brought an end to an eight months' stoppage in the building industry in this country. It is hardly to be expected, however, that the building of new houses will be taken up on a larger scale, because the northern climate generally prevents the foundation work and the erection of walls during the coldest months of the year, but there will be plenty to go on with on half-finished jobs which were deserted when the signal for strike was given last April. The stoppage in the building industry has, of course, greatly accentuated the lack of housing

Business is practically at a standstill, and large stocks in almost every commodity are pressing the market heavily. The closing of navigation in the Northern Baltic has caused a severe scarcity of outward cargoes, and has compelled many shipowners to lay up their ships for want of remunerative employment. Next month, when the taxes fall due, will probably prove a very trying one for many concerns. The Scandinavian countries, which during the war have co-operated in many ways, have just summoned a conference between their industrial representatives here,

to discuss various measures which might be jointly undertaken to relieve industrial distress.

The latest figures for Sweden's foreign trade during October last show a decisive reduction of imports, whereas exports are pretty well maintained. Especially remarkable is a substantial falling off in the imports of motor cars and cycles, and evidently stocks of these goods are sufficient to cover consumption for some time to come. Of Sweden's standard export articles, such as timber, wood pulp, and iron ores, exports showed quite satisfactory figures, but exports of half-finished iron and steel showed a slight reduction.

NORWAY.—BUSINESS SLACK—PENDING RAILWAY STRIKE—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, November 26.

BUSINESS is as slow as or slower than ever. The wood and allied trades are in an apathetic state, and even the wood pulp, cellulose, and paper trade, which for a considerable time after other lines of industry and trade had become inactive remained in a bright condition, is now sharing in the common dullness. Acting in concert with other Scandinavian papermakers, our mills have decided to curtail production by one-third, and even then the output is more than the market will absorb. Prices of timber have gone down considerably from the pitch to which they had climbed a couple of months ago. It is expectel, however, that foreign purchases, more especially of pulp, paper, and woodpulp boards, will revive again after New Year, not only from the annually recurrent reason that the Baltic supplies will be cut off by ice, but also on account of drought. There is now no more hope of any rain before March or April, and it is, then, absolutely certain that a lack of water for industrial purposes of a universal nature will set in very soon all over Scandinavia, which will practically stop production.

The main trouble of commercial and social life in the country is the impending railway strike referred to in a previous letter. So far no agreement has been arrived at; the railway men have given notice to stop work on December 1st. The matter now rests with the Storting. Our capital has been visited by delegates from the Swedish and Danish railway employees, who have promised their Norwegian colleagues moral and financial aid, which will, of course, put the latter into a much better position to fight their cause.

The stock exchange remains inactive, but there have been less drops in the value of stocks lately. The imports of practically all kinds of commodities are constantly decreasing, and now are nearing normal figures. Though the exchanges remain in a state very adverse to this country, these reduced exports are hoped, by and by, to create an improvement.

DENMARK.—TRADE POLICY — FALLING PRICES—STOCK MARKETS AND EXCHANGE.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, November 26.

A CHANGE has apparently, somewhat suddenly and unexpectedly, come over the Danish Government's commercial policy. They have to some extent discarded the views embodied in the report of the Foreign Exchange Commission. Several factors have brought about this change, amongst them the fall in prices of many commodities, the doings of the Brussels Conference, and the trend of events and public opinion elsewhere. Under these circumstances the Government, for diverse reasons, do not consider an embargo on certain imports, as recommended by the Foreign Exchange Commission, expedient, inasmuch as the beneficial effects of this step might prove of minor importance compared with the drawbacks likely to ensue. Nor do the Government consider a further rationing of articles of food, likewise recommended by the Commission, as likely to have the desired effect, and the Government cannot agree with the views expressed by an influential section of the Commission, recommending a substantial increase in the duty as a means of limiting imports. The Government further refer to the fact that conditions apparently show a tendency towards bringing about a satisfactory balance in the matter of Denmark's foreign commerce. The deficit of the present year is estimated at some 700,000,000 kr, against 1,100,000,000 kr for 1919, and prices on the world's markets have fallen since the Commission was appointed, and show a continued tendency to drop. The Government are anxious that Danish consumers shall reap the benefit of this fall in prices, without undue hindrance. As England is the country which is of far the greatest importance to Denmark in the matter of foreign trade, the Government have decided upon direct negotiations with the British authorities, and the Minister of Commerce, the Minister of Agriculture, and his Excellency H. N. Andersen, the founder of the East Asiatic Company, have proceeded to England for that purpose. The outcome of this visit to England is awaited with interest.

Another war time restriction is being removed, the Government having introduced a Bill purporting to bring the Freight Board to an end. The Board was formed at a critical period for the purpose of securing Danish tonnage at fixed rates for the import into Denmark of necessary commodities, and it is universally admitted that this arrangement has worked well. This is the last war restriction as regards shipping. The Stock Exchange has actually begun to show signs of a revival, the last few days having witnessed a distinctly better tone, with rising quotations for most descriptions of shares. The foreign exchanges show no signs of betterment as far as the Danish kr is concerned, with £ at 25.83, and $ at 742.00. Marks have improved again, and are quoted 10.85 (11.35 the previous day), and Swedish krone at 142.50. The movement of retail prices does not seem to favour the consumer; for October bread and flour were dearer on account of a new Act taking effect; tea, dried fruit, and beer were dearer, butter had risen 1.50 kr per kilo since July; eggs and milk decidedly dearer; coal and petroleum dearer; coffee and vegetables somewhat lower.

SWITZERLAND.—COAL—THE WATCH INDUSTRY.

(FROM OUR CORRESPONDENT.)

GENEVA, November 29.

ON November 27th M. Emile Odier, one of the chiefs of the famous bankers' firm, Lombard, Odier, et Cie., the correspondents of numerous English and American bankers, died in Geneva. M. Odier was a member of the board of the "Union Financière," and of most of the Geneva and Zurich financial holding companies.

The Government coal import office—practically a monopoly institution, for the Swiss home output of coal has no commercial importance—has reduced coal prices by 10 to 15 per cent., and abolished practically all rationing of coal. Arrivals of foreign coal are now practically on the pre-war level; meanwhile consumption has considerably decreased. On the other hand, the bad climatic conditions of the last two months—for eight weeks no drop of rain has fallen in many parts of the country—will necessitate an introduction of a rationing of electric current should the next fortnight not see a change of weather.

Unemployment in the watch industry has seriously increased. Several important factories of cheaper watches have dismissed most of their workmen, and factories for the manufacture of watch parts have closed down. The Nationalbank refuses to finance production for stock, judging the stocks in the country to be already too large. This crisis is by no means caused by the existence of any cheap foreign competition, but is due to the exhaustion of buying power in many countries. Curiously enough, very expensive first-class gold and platinum watches are still fairly well sold abroad, and it is chiefly the cheaper good average Swiss watch which finds no buyers.

NEW ZEALAND.—COAL INDUSTRY—WATER POWER.

(FROM OUR CORRESPONDENT.)

NEW ZEALAND, September 11.

AT the present time, when our papers are publishing long cables about the threatened coal strike in England, we are also having trouble in our coal industry. A little over a year ago, owing partly to the disorganisation of shipping caused by the war, the dearth of coal in New Zealand became so acute that it necessitated a railway cut lasting several weeks. Since then the coal-miners seem to have determined to prevent stocks from accumulating, thinking apparently by this policy to hold a lever to enable them to enforce any of their demands. Consequently the last 14 months has seen a "go slow" policy in the mines, with a series of sporadic strikes on any trivial pretexts. This has led to partial stoppages of various industries and scarcity of coal for various municipal tramway and gas systems, until the situation has become almost unbearable. The country has become very restive under these conditions. In the event of a general coal strike the wharf labourers will certainly throw in their lot with the coal-miners, and in some quarters it is expected that some of the railway employees will also go out in sympathy. The miners in the State coal mines have been among the worst offenders in this "pin-pricking" policy, and recently Mr Massey had to threaten that unless they ceased striking he would close the mines down. Upon which they returned to work.

Lately the situation has eased slightly, and may clear without the threatened dislocation, but there is a feeling that the miners may be only biding their time. If they do decide on a general strike, it is certain the feeling will be strongly against them, and the Government will have strong support in any measures they make take. In the meantime, the unrest has given a great fillip to the various water power schemes proposed and in hand, and the next few years will see a great extension of electrical transmission of power in New Zealand.

Letters to the Editor.

WHAT IS A BANK?

TO THE EDITOR OF THE ECONOMIST.

SIR,—Everyone interested in the maintenance of the splendid international reputation of the British and Irish banks and the preservation of their status at home and abroad will agree with Dr Leaf in the views expressed in his address at the Bankers' Institute and with your remarks thereon as to the necessity of a better definition by law of what is a bank and what constitutes it. We all wish that there be a statutory definition given which will meet the modern wants and satisfy the requirements of honest trading, so that no individual, syndicate or body may be carrying on that reputable business by disreputable methods, and thereby lowering the character of a great and growing business interest. Banking has in recent years grown beyond the limits contemplated by all Acts of Parliament regulating its operations, and there is need of a more up-to-date definition and limitation of the term in the public interest. It is not fair or right that the great banking institutions of the three kingdoms should be brought to the low level of being even nominally associated with transactions that do not come up to the standard of their high character, and that individuals or bodies calling themselves banks, with occasionally some qualifying adjective or otherwise, should be deceiving the too-confiding public and often engaged in transactions which, when exposed in the law courts, cannot but be considered as more or less than fraudulent dealings. The present term "bank" is popularly supposed to mean, as explained in Murray's monumental work, *The New English Dictionary,* "an establishment for the custody of money received from or on behalf of its customers; its essential duty is the payment of the order given on it by the customers; its profits arise mainly from the investment of the money left unused by them." That is what popularly may be called a bank and the ordinary conception of its functions. But there are institutions in this country trading as banks and calling themselves banks with some qualifying adjective which sometimes do not fulfil the first conditions of this definition, the receipt of money, and which are mere moneylending bodies. It is only right that such institutions and individuals should not be allowed to trade as banks and as they are doing. The obligations of the great trust reposed in banks by the public should be respected. These institutions should be protected, and the public, on the other hand, should be safeguarded against fraud. Organisations, whether run by one or more individuals, which cannot submit to the statutory tests that the new law should impose should not be permitted to use a name associated in the public mind with certain safe and reputable financial operations. The definition which Dr Leaf suggests appears to me to be sufficiently comprehensive and correct. That is, a bank to mean "any persons who receive from the public, on current account, money which is to be repayable on demand by cheque or who use the word bank or any derivative of that word as part of the title under which they carry on business."

The legal definition of a banker is elaborately discussed in the case of Stafford *v.* Henry (1849), 12 Irish R.Eq., 400, and in Morse on *The Law of Banking* (American), 4th Ed., p. 6, as well as in other places and cases. Mr Hart, in his *Law of Banking,* refers to them. As the result of these decisions he considers that the following definition which he gives is, for the purposes of an English law book, sufficient. His definition is:—"A banker is one who, in the ordinary course of his business, honours cheques drawn upon him by persons from and for whom he receives moneys on current accounts."

By the Money Lenders Act, 1900 (63 and 64 Vic. c. 51), and by the Money Lenders Act, 1911 (1 and 2 Geo. V., c. 38, sec. 2), a person whose business is that of money-lending who does not *bonâ fide* carry on the business of banking or insurance or any business not having for its primary object the lending of money cannot advertise or publish any circular implying that he carries on banking business. Nor can anyone be registered as a money-lender under any name, including the word "bank," or under any name implying that he carries on banking business. Still, the law is evaded every day, as one can observe by a glance at the advertising columns of the Press, where we find mere money-lending individuals and firms calling themselves banks with some qualifying word or otherwise, such as "Western" or suchlike. There is not sufficient protection under the existing law as we know and see.

Lord Halsbury, in his excellent work *The Laws of England,* defines a bank as "a corporation, partnership, or individual carrying on the business of banking." And a banker "as such individual or member of such partnership, but for some purposes the term 'banker' includes corporations or partnerships carrying on the business of banking." "The business of banking," says he, "strictly speaking, is the receipt of money from or on account of a customer to be repaid on demand or when drawn on by cheque (Foley *v.* Hill, 2 H. L. Cas. 28). The collection of crossed cheques, being a statutory necessity, is part of the business of banking. The numerous other functions undertaken by modern bankers, such as the payment of domiciled bills, the custody of valuables, and discounting bills, do not come within the direct definition of banking business.

The Companies Act, 1862-84, prohibits any company or partnership of more than ten persons to be formed after August 7, 1862, for the purpose of carrying on the business of banking unless it is formed under the Act or under some other Act of Parliament or under letters patent. The Act permits existing banking companies or partnerships to register under it, and companies so registered must publish half-yearly statements of their capital shares issued, calls made, liabilities or assets, and must have their accounts audited half-yearly.

These regulations, definitions, and laws still do not go far enough, and do not meet the altered circumstances and changed conditions we have now to face and provide for. Banks should be protected against persons or individuals falsely using the name which carries with it in the public mind a sense of security, and implies stability and safety. Unauthorised bodies or individuals are still,

despite the Money Lenders Act, able to use the name of bank in connection with their operations, while, as we see by the definition of bank, they do not fulfil the first essential conditions.

It is therefore to be hoped that Parliament will find time to come to the relief of the great banking corporations, and pass a law which will make it inconvenient, if not unsafe, for any person or persons to hold themselves out to the too confiding British and Irish public as a bank, while, at the same time, they fail to fulfil the most essential requirements attaching to such an institution according to accepted legal and ordinary conceptions.

Dr Leaf is to be thanked for calling attention to this need in his able paper on the subject.—Yours truly,

RICHARD J. KELLY.

1 Seaview terrace, Aylesbury road, Dublin.

SHORT-TERM NOTES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The letter of your correspondent "City" on the subject of the ratio between the assets of a company and a new issue of notes raises a point of considerable importance, and exposes a flaw which has appeared in a number of prospectuses recently.

In the prospectuses I refer to it has been the practice to select one group of unsecured liabilities (namely, the new issue of notes), deduct the other liabilities from the assets, and state the ratio which the one figure bears to the other. The result is, in many cases, misleading to the public, although the statement in the prospectus may be, and probably is, literally correct.

For instance, take the following figures :—

		£
Assets (including proceeds of notes)		2,000,000
Liabilities—		
First mortgage debentures	£500,000	
Sundry creditors.....	399,900	
Audit fee	100	
	900,000	
Notes.....	100,000	
		1,000,000
		1,000,000

The debentures are covered four times, while the liabilities, taken as a whole, are covered twice (subject to realisation of the assets). But following the reasoning of certain of our financiers, the sundry creditors are covered $3\frac{1}{2}$ times, the notes are covered 11 times, and the audit fee is covered 10,001 times.

I think it must be accepted on reflection that, if the total liabilities are covered twice, no individual unsecured liability can be said to be covered *more* than twice.—I am, yours faithfully, CHARTERED ACCOUNTANT.

November 30th, 1920.

INDIAN EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In a letter under this heading, published in your issue of October 2nd, Mr E. P. Stocker says that "the rupee is harnessed to gold." Why ignore facts? The silver steed has broken away from the golden chariot, and is careering wildly at his own free will. The harness must be rotten, and he will probably now take some catching before he can again be harnessed to anything at all.

Your correspondent then states that "India can boast of a convertible note issue." It may be convertible, but the convertibility is nothing to boast about. If Mr Stocker will examine the Indian Currency Return of October 15th he will see that out of a total note circulation of Rs.158 crores, Rs. 69 crores or more than the total pre-war circulation) are held against securities of the Government of India, and this "watering" of the note issue, in a creditor country like India, which has made a fortune out of the war, can only be due to one cause—mismanagement. —Yours faithfully F. W. S.

Calcutta, November 2nd, 1920.

THE PACIFIC PHOSPHATE COMPANY'S CLAIM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The shareholders of the Pacific Phosphate Company are not satisfied, we are told, with the bargain made by their directors with the Imperial and Australian Governments. The sum of £3,500,000 is inadequate, they say. Nevertheless, they propose to accept it rather than go to arbitration about it. The question for the ordinary citizen, however, is not whether arbitration is necessary, but whether the moment has not arrived for a full inquiry into the history of the company and the concession.

The Pacific Phosphate Company was originally a syndicate composed of some influential ex-public servants, Members of Parliament, and others. Early in the present century they obtained from a friendly Colonial Office a concession for a term of 99 years to dig and export the guano-phosphates from Paanopa (Ocean Island) of the Gilberts. The only consideration was a rent of £50 per annum, payable to the natives to the end of 1905, and after that in lieu of rent a 6d per ton royalty to the Imperial Exchequer on all that they exported. Considering that these Gilbert phosphates are the finest in the world, and are estimated to amount to at least 12, and possibly 25, millions of tons, and that the company's net profit on the two millions of tons so far exported is calculated to have been over two millions of pounds, it will be agreed that the company did well for itself.

From this immense wealth of phosphate the whole revenue of the Gilbert Islands Administration could easily have been obtained, but the interests of the indigenous population were ignored. The phosphate is the one great asset; the poor sandy soil of the Gilberts producing little but pandanus and cocoanuts, the principal food of the natives, and these crops have sometimes failed through drought, and the people have been starving. It was on the cocoanuts, however, not the phosphates, that levies were made by the Administration, and this mode of raising revenue naturally helped to drive the natives to work for the company.

Agitation in Parliament and the Press failed to obtain a public inquiry into the case, but eventually some gratuitous payments were made. In 1908 the company exported upwards of 200,000 tons; it gave the natives £1,148, paid royalty to the Imperial Exchequer £5,351 11s, and secured a net profit of £307,205 8s 5d, thus obtaining 614 per cent. on its real cash capital £50,000. At the end of 1909 the Imperial Exchequer resigned its right to the royalty in favour of the Gilbert Islands Treasury. In or about 1914 the royalty was increased to 1s; the money this extra 6d brings in goes to a trust fund for the benefit of the native owners of the phosphate property.

The year before the war, 1913-14, the phosphate exports were valued at £305,000, the royalty paid that year to the Gilbert Island's Treasury amounted to £5,503 18s 6d, the copra (*i.e.*, dried kernels of cocoanuts) exports were valued at £45,000, the direct native tax £9,856 3s 4d, leaving just over £35,000 among 30,000 natives. What the natives pay through indirect taxation it is hard to say, but they are charged exceedingly high prices for the goods they buy. The war seriously crippled the ocean-carrying trade, and phosphate exports gradually decreased, but evidently sufficient shipping space was found for the copra, and the average value of these exports in the nine years 1910-11 to 1918-19 was just under £49,000, probably the highest ever attained for nine consecutive years; there was a rise in the price of copra. The expenditure has been increasing; in 1910-11 the revenue amounted to £13,963 5s 6d, the expenditure £12,291 5s 8d; in 1918-19 the revenue came to £24,449 14s 7d, the expenditure £30,784 5s. To help balance the account a further levy, it seems, is to be made on the copra in the form of an export tax of 10s per ton. The cry is for still more revenue. It is hoped the copra yield will be good; a drought now would certainly have a most serious effect on the finances. Had the natives been justly treated in regard to the Gilberts' one great asset, the phosphate, there would not have been the slightest difficulty about revenue.

The company's claim to the phosphate rests on the above-mentioned licence given to the company by the Colonial Office, the trustee for the natives, and one can-

not believe that this document, in which the interests of these wards are so utterly ignored, can, if brought to the test, be upheld as valid in law, as valid in equity.

The company's claim to the Nouru phosphates was brought about, it appears, by the simple process of amalgamating with the German syndicate there. Thus the keeping up of prices was insured to the mutual benefit of British and German shareholders. The company's profits on the phosphates exported from this island must have been great, but, as far as I am aware, no statistics have been published.—I am, Sir, yours faithfully,

T. C. T. Potts.

Books and Publications.

REVIEWS.

"Camara de Comercio y Navegacion de Barcelona." Memoria Comercial del Año 1918. (Barcelona) Heinrich and Co., 1920.

The publication of this massive annual of 800 pages has been delayed a year, first by labour troubles, and then for want of paper; but the delay has enabled the editor to revise some of the statistics of former years, and to make valuable additions, notably a list of prices of the more important commodities for every year since 1890. The results are exhibited graphically in a number of coloured diagrams. A valuable commentary is prefixed dealing with the minute statistical tables which make up the bulk of the book, and it closes with an interesting summary of the effects on the trade, shipping, and labour conditions of the province produced by the last year of the war. It was a strangely anomalous year: the shipping of the port was sunk by the Germans, held up in the United States; coal and raw materials were scarce; transport at home was hampered; high prices, food riots, polical disturbances, and some 120 strikes in the city and province of Barcelona alone, accompanied by a number of murders of employers and non-unionist workers, were coupled with great activity in the stock markets, an unprecedented expansion in banking and its profits, increased shipbuilding, much amalgamation of large industrial undertakings, and an immense rise in the value of real property. The Chamber may be congratulated on this valuable contribution to the material of economic history.

"The American Era." By H. H. Powers. Macmillan.

In this very readable book of 306 pages Mr Powers first sets out to show that the United States is now easily the richest and mightiest power in the world, and proceeds to examine her qualifications for bearing the burden which this leadership brings with it. This, he says, "is the legacy of the war. Anglo-Saxons the mainstay of the world, and America the mainstay of the Anglo-Saxons." Again: "We have more than paid the cost of the war by war-time economies, and have taken Britain's place as the creditor of the nations. To-day Britain stands not merely as a customer, but as a suppliant, asking of our abundance." Perhaps there is some exaggeration in this view, but Mr Powers writes with insight and impartiality concerning the many problems that face America in the position of leadership to which the war has raised her.

"The Coming Revolution in Great Britain." By Gerald Gould, M.A., Fellow of University College, London, late Fellow of Merton College, Oxford. With a preface by Geo. Lansbury. W. Collins, Sons, and Co. 6s net.

Mr Gould is convinced that "redistribution of the national income by communal ownership and workers' control, is *an urgent and inevitable necessity.*" As a characteristic example of the acumen and veracity with which this highly educated gentleman discusses his theme, we may cite his statement that "the War Loans, in their essence, are simply a means of making the workers pay over and over again for a war for which they have already worked to produce the necessary materials. They thus illustrate to perfection the nature of capitalist finance." But the book is worth looking into as a specimen of the doctrine now being provided by certain "intellectuals" for the edification of wage-earners.

BOOKS RECEIVED.

A Capital Levy and a Levy on War Wealth. By A. C. Pigou. (London) Humphrey Milford. 2s 6d.

Why Prices Rise and Fall. By F. W. Pethick Lawrence. (London) Humphrey Milford. 2s 6d.

Modern Finance. By Emile Burns. (London) Humphrey Milford. 2s 6d.

This catalogue is worthy of note as being printed throughout in English, French, Spanish, and Dutch.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket.	Account.
December 14.	December 15.

Stock Exchange markets have developed a more cheerful tone in most departments of the House. The violent liquidation of the past fortnight, which culminated in a further flood of selling on Monday, was partially turned off on Tuesday, and in a very short time the cessation of indiscriminate sales led to bargain-hunting and a fair amount of genuine investment purchases. The bears who had been taking liberties with some of the liquid markets quickly observed the change in the situation, and their buying fortified the situation, already changed for the better by the purchases just mentioned. Rumours were started to the effect that the Bank rate was likely to be reduced at an early date, and, although nobody placed any reliance upon this, it had an effect in brightening the outlook. The consequence is, that in most of the active markets a firmer tone is apparent than the House has experienced for the last two or three weeks, although general opinion acknowledges the possibility of further sales having to be made as the end of the year approaches, and commitments in other markets, more particularly those connected with commodities, fall due to be financed.

Consols have been down to another low-level record of 43¾ cum. dividend, but the price recovered a little after the pressure to sell was relaxed, and an improvement in the War Loan led a fairly general rally in other gilt-edged stocks. Some of the newly issued scrip, however, continues dull, this being the case with the New South Wales 6½ per cents. and the Metropolitan Water "C" stock, though the new Local Loans advanced

from a discount to a slight premium. The foreign market is still disturbed by the flatness of French bonds. Indeed, Foreigners are somewhat heavy throughout, and the ever-present fear of Paris selling suffices to keep prices down in this department.

Home Railways gave way, on the thinly veiled hints of Mr J. H. Thomas as to possible trouble with the railwaymen in the near future. The Heavy stocks were affected, and Undergrounds are also weak. The Prior-charge issues, however, maintain their prices, with the debentures more especially in demand. Canadian Pacifics and Grand Trunks have moved but little. Mexican Rails continue dormant. Brazilians are heavy, and the Cuban descriptions weakened, in consequence of the disorganised state of business reported from the island. Argentine Railways, after extreme depression, hardened towards the end of the week. Local conditions reported from the Argentine Republic are still somewhat discouraging, and traffics lend little support to the market for the stocks. San Antonio Land and Irrigation bonds, after being up to 35, tumbled to 20, on the unexpected news that the deal which had been arranged between the company and a Texas financier has fallen through.

The rubber market is exceedingly quiet, and, although the price of the produce rose a shade below the worst, this brought in no fresh support. The oil market has been the principal focus of interest throughout the week. Owing to the fact of its liquid nature, sales have been possible throughout the times of crisis, and the Stock Exchange as a whole has watched the market with keen interest, not untouched with anxiety. Prices dropped heavily in the slump, but sharp recoveries occurred as soon as it became apparent that the forced selling had ceased. Towards the latter part of the week, substantial improvements from the lowest prices were shown, and, although the fear of renewed selling has the effect of restraining exuberance, it is hoped that the worst of the liquidation may be over. Many other industrial departments revolved closely round the movements of the oil market. It has not been difficult to see where selling pressure became exerted. Brewery stocks have given way, textiles, wireless, iron and steel, cotton shares, shipping, tobacco, and various others of this nature. Improvement occurred in most of them when the oil market showed signs of convalescence. New issues have gone none too happily for the underwriters. Ebbw Vale 8 per cent. Notes were left in the hands of the underwriters to the extent of 80 per cent., and the price fell at one time to 7 discount, which, however, attracted buyers from outside. Of the Niger Notes, underwriters received 90 per cent. There is still a good deal of underwriting stock afloat in connection with various new issues recently made, and until this finds a more or less permanent home, the stream of new issues is likely to be checked to some extent. Dunlops have been a weak spot at about 20s. The new shares are now 22s 6d paid, the penultimate call of 7s 6d a share having fallen due last Tuesday. The next call of 7s 6d becomes payable in February.

The course of the Kaffir market has followed in its main lines that already indicated in connection with most of the markets. After being flat early in the week, the market developed greater powers of resistance during the last day or two, but there has been little business to back up the improvement. A sharp break in Chartered showed that liquidation had broken out here also. As soon as the selling finished, the price promptly responded to a little support. Esperanzas rose from 16s 3d to 25s on Tuesday, dipping to 18s 9d on the following day, and thereafter moving erratically. Other Mexican mining shares have been irregular. Russio-Asiatics kept up fairly well, on the continued hope that trade with Russia may be resumed before long. Broken Hill shares, and those in other companies connected with base metals, are mostly depressed, in consequence of the flatness which has overtaken the markets for their goods. Cornish tin shares have been lowered with the rest, and amongst West Africans the absence of business has caused the market to drift into a condition where dealings tend to become a matter of negotiation.

We are officially informed that Mr Walter Stanley Ridgers has been expelled from the Stock Exchange.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

1913	196,536,980

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

5-15 Year Treasury Bonds (Series B).—Repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Spicer Bros., Limited.—Authorised capital £600,000, of which all has been issued. The company has outstanding £104,620 (part of a total authorised issue of £150,000) 4½ per cent. debenture stock. This is an issue at 97 per cent. of £300,000 8 per cent. notes, "repayable in or before 1936" at 102 per cent. Spicer Bros., Limited, was incorporated in November, 1889, and the company carries on an extensive business as wholesale stationers, paper makers, paper merchants, &c. Since the accounts for the year ended March 31, 1920, appeared, £100,000 of the general reserve has been capitalised and issued as fully-paid shares to ordinary shareholders. Profits are shown from 1912. Surplus assets are stated as £734,108. Investments at £241,437 are taken "at cost, less reserves." The managing director states that these investments "represent investments in business related to that carried on by the company." The item "freehold and leasehold premises, fixtures, machinery, &c.," at £326,335 is also commented upon by the managing director, who states that "no regard has been paid to the general appreciation in values." There are several favourable points about this issue, and the prospectus is a clear statement of affairs. Although the company agrees not to issue any mortgage debentures beyond the £150,000 referred to above, it is stated that "the company is at liberty to issue further notes at a rate of interest not exceeding 8 per cent. per annum." That the National Provincial and Union Bank of England, Limited, underwrites the issue at 3 per cent. is a good indication of the reputation of the business. But, notwithstanding these obviously favourable conditions, investors should realise that in subscribing to these

notes they are pinning their faith solely to the prestige of a good business. Moreover, the possibility of further issues of notes to rank *pari passu* with these is a point which investors should not overlook.

Allen and Hanburys, Limited. — Authorised capital £850,000, of which £435,000 has been issued and is fully paid. There are also debentures for £160,000. This is an issue at par of 150,000 8 per cent. cumulative "A" preferred ordinary shares of £1 each, being part of an authorised issue of £300,000 of such shares. Voting powers attached to these shares are limited. The issue ranks after £475,000 of issued share and loan capital, but before £60,000 of deferred ordinary shares. The company was formed in 1893, with a capital of £75,000, to carry on an old-established business of manufacturing and wholesale chemists. Surplus assets are shown as £642,142, exclusive of any value for goodwill, trade-marks, &c. Amongst assets, however, freehold and leasehold at £134,104 were valued on August 3, 1920. Apparently about £70,000 is at stake in the dealings with the Russian subsidiary company. However, the company has adopted a conservative policy over this matter, and if and when trading begins again with Russia, this part of the company's business may possibly provide some pleasant surprises for shareholders. Drugs are among the prime need of Russia. The issue cannot be said to be well secured as regards capital, especially in view of the top-heavy nature of the capitalisation; and in view of this and of the limited voting powers, the terms are not very attractive.

The Gordon Hotels, Limited.—Authorised capital £1,931,000, of which all has been issued. There is also an authorised debenture stock of £1,705,000, of which £1,665,000 has been issued. This is an issue of £250,000 8 per cent. seven-year convertible notes at £100 per cent. These notes are "due on or before January 1, 1928, at 107 per cent., with the option to exchange in ordinary shares at par." For the past 10 years the £10 ordinary shares of this undertaking have fluctuated between £7⅞ in 1920 and 15s in 1917. The current quotation is round about £4⅜. Thus the option to convert would appear to be somewhat unattractive. The company was formed in 1890 to acquire a group of first-class hotels in London and elsewhere. Profits have not always been sufficient to cover preference dividends. The cumulative 5½ per cent. preference dividend has been paid up to May 31, 1918, leaving two years of arrears to be cleared off. In the prospectus, figures are given for three years' profits. It is only fair to state, however, that war conditions and Government occupation of hotels seriously retarded the profitable working of the business. Surplus assets are valued at £2,262,502, and the item of "purchase price of freehold and leasehold properties, &c.," at £3,735,267 is taken from the balance-sheet, and does not appear to have been specially valued for this occasion. If this is so, investors have in this one item a very substantial hidden reserve. Noteholders are protected by a trust deed, which provides that no further notes can be issued, nor any security ranking in priority to these notes be created. We do not consider the issue attractive. Intending investors are advised to read an article on "Short-Term Notes" which appeared in the *Economist* for November 20th (see page 900); also a letter which was published in our last issue (see page 946).

Cambrian Leather Works, Limited.—Authorised capital £250,000, in shares of £1 each. There is a debenture stock of £50,000, but against this sinking funds exist for £19,899. This is an issue of 175,000 shares at par. The company has been formed to acquire as a going concern the old-established business of leather manufacturers carried on by J. Meredith-Jones and Sons, Limited, at Wrexham. Profits are set out from 1911, while surplus assets are valued at £120,000, exclusive of goodwill. This sum has been fixed as the purchase price, which is payable in cash. Although goodwill and trade-marks must be of considerable value, on the other hand, freehold land and buildings, plant, &c., are taken at a valuation made on April 15, 1920. The old undertaking (the vendor company) has a total issued share capital of £40,007. Preliminary expenses payable by the company "are estimated not to exceed £15,000." Although the vendors take payment in cash, the issue has not been underwritten, and the company will not proceed to allotment unless 100,000 shares are applied for. The gentleman who "has for some years been mainly responsible" for the management of the vendor concern is managing director of the new company. From the prospectus it is not clear to what extent those financially interested in the old company are financially supporting the new concern. These shares are a reasonable risk for the opulent investor.

Barcelona Traction, Light, and Power Company, Limited. — Authorised share capital $42,500,000, of which $35,933,500 has been issued. Authorised bond capital in English sterling amounts to £15,500,000, of which £11,161,825 has been sold. There are also 6 per cent. six-year bonds in pesetas, of which 30 million pesetas have been authorised, and 20 million issued. Finally, in addition to this list, there have been issued (or are to be issued), in satisfaction of funded interest, 5½ per cent. income bonds amounting to £2,372,136. This is an offer for sale, at 94 per cent., of £1,050,000 8 per cent. "secured debentures," being part of an authorised issue of £1,100,000, redeemable by drawings at 106 within a period of 20 years. These debentures are secured by a trust deed in favour of Baring Brothers and Co., Limited, constituting the debentures, in addition to being a direct obligation of the company, a first specific charge on £1,915,500 (par value) 6 per cent. prior lien "B" bonds. The "offer for sale" states that "the amount of the interest on the £1,915,500 prior lien 'B' bonds deposited with the trustee as collateral security—namely, £114,930—will be sufficient to provide the interest on the £1,050,000 debentures—namely, £84,000—and the sinking fund." As set out in records, the finances of the undertaking appear to be extremely complicated. The net revenue available for payment of interest on "B" bonds is shown for four years past, and if this money is devoted to payment of interest, instead of being applied to capital expenditure, interest on "B" bonds will be well covered. In addition to this, it is a favourable point that Baring Brothers and Co., Limited, are acting as trustees. On the other hand, the fact that Barcelona is a city, at times, of considerable unrest should not be overlooked.

Samuel Jones and Co. (Devonvale), Limited.—Authorised capital £100,000, divided into 50,000 8 per cent. cumulative preference shares of £1 each and 50,000 ordinary shares of £1 each. This is an issue of the whole of the ordinary shares and 25,000 preference shares, at par. Applicants for preference shares will have a preferential right to apply for a similar number of ordinary shares. An interesting concession is made to preference shareholders in the event of voluntary liquidation—namely, that preference shares will be repaid, plus 10 per cent. premium. The company has been formed to carry on the business of paper coating and gumming. Devonvale Mills, in Clackmannanshire, have been acquired for £12,000. This figure, according to an independent valuation, is considerably below the present-day value. It is stated that the mills are suitable for the purposes of the company's business, and it is proposed that Messrs Samuel Jones and Co., Limited, of London, will act as "selling agents." The directors and friends have agreed to take "at least 20,000 shares." Preference shareholders have limited power of voting. It is also stated that "the directors are all active, practical men, who have had a lifelong association with the paper trade." The advertised prospectus is a reasonable statement of affairs, and, provided that an equitable agreement can be made between the company and its selling agents, the undertaking may prove successful. The issue, however, is mainly suitable for the consideration of those who have a knowledge of the capabilities of the directors, and understand the position of this particular section of the paper industry.

Boekit Boendar Rubber Company, Limited.—Authorised capital £200,000, in shares of £1 each, of which £120,600 has been issued and is fully paid up. This is a rubber-growing undertaking, with a total area of 2,100 acres, and was registered as a company on November 9, 1916. Apparently the first planting was in 1917. Reports state that trees are healthy and growing well. The directors, to complete planting, are issuing at par 8 per cent. convertible debentures. The total authorised amount of these debentures is £75,000. They will be issued at par, and are redeemable by the company at latest by December 31, 1926. The stock is convertible into ordinary shares at par at the option of the stockholder at any time not less than three months before the stock is redeemable. This is an issue suitable only for those who have already an interest in the concern, and faith in the further prospects of the company. To the outside investor the rate offered is not attractive.

Fellows Magneto Company, Limited. — Authorised capital £500,000, divided into 200,000 8 per cent. cumulative participating preferred shares of £1 each and 600,000 ordinary shares of 10s each. Participating preferred shares are entitled, in addition to the 8 per cent. cumulative dividend, to 20 per cent. of the net profits which it is decided to distribute as dividends in each year after payment of the 8 per cent. preferential dividend. The ordinary shares are entitled to remaining 80 per cent. of profits. The present is an offer for sale of "the balance of the 145,000 ordinary shares and option certificates, at £1 each, inclusive of one option certificate." It will be noticed that this is an offer for sale "of the balance of the 145,000 ordinary shares," presumably referring to an offer of 145,000 ordinary shares offered to the public about seven weeks ago. It would have been more satisfactory if the "offer for sale" stated how many shares had been purchased as a result of the offer, and figures given showing how many shares are now offered. The same optimistic statement to which we drew attention in our issue of October 16, 1920, page 595, again appears in the present offer as advertised, which shows that, provided the shares rise to 25s per share, the total profit to an investor of £100 "on the exercise of his option" would amount to £70, of which £57 10s would be free of income-tax. The suggestion that £100 can make a profit of £70 scarcely reads like conservative commercial finance, and on the face of it, it must be very unsuitable for the small investor. Incidentally, investors should also calculate what they may lose if the shares should fall to par.

The Tenasserim Hevea Plantation, Limited.—Authorised issue of £50,000 10 per cent. convertible first mortgage registered debentures of £10 each, of which £30,000 is now offered at par. These debentures will be secured by a trust deed constituting a specific first mortgage on the whole of the company's properties (except the Baiktaung Estate, comprising about 80 acres), consisting of about 2,600 planted acres in the Mergui district of Lower Burma, and a floating charge upon other assets. They will be redeemed on November 30, 1930, at a premium of 5 per cent., but at any time previous to redemption holders have the right of converting into ordinary shares at face value. The company was registered on April 13, 1910, and now has an authorised capital of £200,000, in shares of 2s each, having been increased from £50,000 in January, 1920. Capital issued amounts to £114,113, of which 700,000 shares were issued in March, 1920, at a premium of 9d per share. A dividend of 5 per cent. was paid for 1918-19. Recent markings of "new" shares in the Supplementary List have been 2s-1s 10½d. The issue will only appeal to those who are already interested in the company.

Southend Gas Company.—Issue at par of £25,000 7 per cent. redeemable preference stock, to be redeemed at par on January 1, 1928. Dividends have been regularly paid on the ordinary stock, and the issue is a good one in its class. The investment, however, must be regarded in the nature of a lock-up, as dealings will be confined to a narrow market.

Estates Control, Limited.—Authorised capital £520,000. There have been issued 24,950 5½ per cent. preference shares of £10 each, 250,000 8 per cent. preferred ordinary shares of £1 each, of which 150,000 were issued at par, and the balance of 100,000 are now offered for sale at par, and 102,500 ordinary shares of 4s each, all of which are owned by Bovril, Limited. Estates Control, Limited, was incorporated in 1903, and is an associated company of Bovril, Limited. The "offer for sale" states that "Estate Control, Limited, has since incorporation paid regular dividends on its preference shares and large dividends on its ordinary shares, the net profits for the last financial year—viz., 1919—being £45,847." The information given in this "offer for sale" is insufficient for us to gauge the position of the company. Perhaps a well-known undertaking like Bovril, Limited, considers the prestige of its own financial support should be sufficient indication of the worth of this offer. But one would like to see prominent concerns like Bovril, Limited, setting an example to less successful companies in the matter of information offered to investors.

National Diamond Factories (Bernard Oppenheimer), Limited.—Authorised capital £2,000,000, in £1 shares, of which £1,300,000 have been issued for cash, and are fully paid. This is an issue of £1,000,000 8 per cent. six-year convertible secured notes at par, repayable at 105 per cent. (unless previously converted into ordinary shares) by three annual drawings, commencing January 1, 1924. The company was formed as a private company in December, 1919, to acquire the Bernard Oppenheimer Diamond Works at Brighton and elsewhere, and purchase these properties and the assets of the business at the cost price. "The notes will be limited to £1,000,000, and will be secured by a trust deed in favour of Barclays Bank, Limited, as trustees, containing a first specific charge on freehold and leasehold lands and buildings, fixed plant, and machinery," and a floating charge on other assets. Surplus assets are valued at £1,300,000, and the assets offered as specific security amount to approximately £286,500, which presumably are valued at present price levels. An optimistic estimate of profits is given. These notes are exchangeable at par into ordinary shares any time before 1924. This issue is too speculative for the man of modest means.

FORTHCOMING ISSUES.

We are informed that the issue of the Amalgamated Trading and Industrial Corporation, Limited, which was to have been made on December 2nd, has been postponed for a week, owing to the death of one of the interested parties. The issue will be made on Thursday, December 9th.

HEAD OFFICES: LIVERPOOL AND LONDON.
ROYAL
INSURANCE COMPANY, LIMITED.
ALL CLASSES OF INSURANCE EFFECTED.

COMPANY MEETINGS, &c.

LIVERPOOL MARINE AND GENERAL INSURANCE COMPANY, LIMITED.

SATISFACTORY YEAR'S WORKING.

"A SAFE AND PRUDENT POLICY."

The second annual ordinary general meeting of the Liverpool Marine and General Insurance Company, Limited, was held on Thursday, November 25, 1920, in the Law Association Rooms, Cook street, Liverpool, Sir Alfred Read (chairman of the directors) presiding.

The other directors present were Messrs J. Lionel Barber, Bernard Barton, J.P., Charles A. Cain, J.P., Major A. S. Collard, C.B.E., J.P., H. Ernest Leetham, J.P., J. W. Pearson, H. Percy Steeves, William Symington, and Henry Williams, with Messrs E. Bailey (London underwriter), A. W. Edmondson (Liverpool underwriter), P. H. Exell (fire manager), Edmund Gormly (accident manager), W. E. Mounsey (auditor), and Andrew Hannay (secretary), and a large number of shareholders.

The Chairman: I will ask the secretary to read the notice convening the meeting and the auditors' report.

The secretary then read the notice and the auditors' report.

The Chairman: Gentlemen,—I have the pleasure to submit to you the report, accounts, and balance-sheet for the year ending June 30th last, and as you have all had copies of these, I submit for your approval that same be taken as read. Agreed.

INCREASE IN CAPITAL.

The Chairman: Gentlemen,—You are busy men, and have not got much time to spare. As you are aware, the accounts deal with the second year of the company's operations, and since our last meeting the company has been changed from a "private" to a "public" company, with an authorised capital increased from £500,000 to £1,000,000, and paid-up capital from £100,000 to £207,000. This increase was considered to be right and advisable by your directors, in view of the rapid expansion of the business of the company, and I am pleased to be able to tell you that the new capital was all subscribed by original shareholders, without going to the pubic and probably saving the cost of underwriting the new issue, if it had been necessary to apply to the public. We are making applications to the Stock Exchange for official quotations, which will, we hope, eventually tend to increase the number of our shareholders, which many people think very desirable, and while hoping for continued support from all those who assisted in launching the company, whether they retain their shares or not, we naturally hope to secure further new business from any extension of our members.

MARINE ACCOUNT.

In the marine account you will notice there is a change in the form from last year, when only claims paid were included. I want to draw attention to this, because the figures before you require explanation. This year we include claims paid and estimate for outstanding at £380,723, which I should like to explain includes an amount of about £150,000 which we have put by to meet claims which might arise on recorded casualties. The amount paid out in claims on account of the present and previous year was £230,000, and the balance of the marine fund was approximately £400,000 instead of £242,000 shown in the account before you. The actual settlement on the account to date at the end of 17 months is about 45 per cent.

Our premium income is principally derived from marine department and incidentally from London marine department, which, although only starting in June, 1919, quickly earned the confidence of London marine brokers, and established itself in a strong position in business circles there, and in this connection I know from personal experience that we are working on the most favourable lines with our confrères in the insurance world, who, without exception, are our friends, and recognise that we are not out to create unhealthy competition. We confidently anticipate a further substantial profit from the first year's working of marine account, as reserves were made very ample.

FIRE DEPARTMENT.

The Fire Department only started its operations 12 months ago, and is proceeding on very conservative lines, which I feel assured will meet with your approval. The ratio of expenses compared with premium income is undoubtedly high, but this ought to be considerably reduced in our next accounts, as the department is now well established, and we look confidently for a much increased premium income from this branch of the company's business.

ACCIDENT ACCOUNT.

As in the case of the fire department, the building up of a substantial premium income in the accident department can only be slow if a conservative policy be adopted. We have got a substantial income in this department, but it is slow business, and it can only, I feel sure, meet with your approval by going cautiously and carefully. I want to emphasise that point, as I did at our last meeting. We want to build the edifice on such a sure foundation as will enable it to weather many storms. The motor trade in particular has been depressed, as you will probably know, and this has undoubtedly militated against better results from the accident department. To enable us to get a really good, sound footing, as it were, in the general accident world, your board purchased a controlling interest in the United Motor and General Insurance Company, Limited, with its head office in London and 24 branches throughout the country, which took effect on April 1st last—it is not a very good day, probably—and we confidently expect will prove to be a desirable asset to us in the near future. It is being very well controlled and managed, and I am happy to say that the representatives of your directors on that board are spending a large amount of time in supervising its affairs. On Mr Leetham, as chairman, falls the major portion of the work, and I think it will not be long before the concern is really doing 50 per cent. better than it has done before.

INVESTMENTS.

With regard to our investments, you will note that we have a much larger amount invested than the paid-up capital, and practically two-thirds of this amount is invested in British Government securities, a large proportion of the same being short-term bonds, payable at a premium from 1923 onwards. The market value of our securities at June 30th last was about £21,000 under cost. Well, we all know the reason. All securities are depressed at the moment, but we hope for a brighter future. We have decided not to write off any of this amount, because we consider they are well secured, and bound to appreciate in the near future as the stock becomes due for redemption. The balance to credit of profit and loss account is £29,548 10s 9d, after writing off depreciation on furniture and all formation expenses, which I think you will agree is quite satisfactory.

THE DIVIDEND.

We are anxious to conserve profits and build up a sound financial organisation, and in recommending a dividend of 7½ per cent. we feel we are adopting a safe and prudent course for the company. It may be here explained that the dividend of 7½ per cent. is payable on the whole of the paid-up capital, about one-half of which was only received quite at the close of the financial year, so that the dividend is approximately equal to 15 per cent. on the original amount. The amount required to pay this dividend only slightly exceeds the income of the company from its investments, viz., £9,449 2s 2d, and, as before stated, we have every hope that there will be a further substantial net profit on the first year's accounts. For the second year, ended June 30th last, we can, of course, only make estimates at present, and it will only be possible at this time next year to see how far these estimates are justified by results, but we consider that ample provision has been made. I should like before sitting down to pay tribute—and I am sure I am voicing the wishes of the shareholders—to our managers, underwriters, and the whole of the staff, who have worked with absolute zeal, looking after the interests of the company in every respect, and I hope they will continue to do in the future as they have done in the past. Before moving the resolution, I shall be glad to answer any questions the shareholders may like to put to me on the report and accounts.

No questions were forthcoming.

The Chairman: If there are no questions, and I have been happy in elucidating any mysteries without your having to ask any questions—there are no mysteries, gentlemen—I will formally move—

"That the directors' report, accounts, and balance-sheet for the

year ending June 30, 1920, as presented to the shareholders, be approved and adopted, and that a dividend of 7½ per cent. per annum on the paid-up capital of the company, less income-tax, be and is hereby declared, payable on and after to-day, November 25, 1920."

The resolution was seconded by Mr H. Ernest Leetham, J.P., and unanimously adopted.

The retiring directors, Sir Alfred Read, Sir Hector Macneal, K.B.E., and Mr H. Percy Steeves, were re-elected directors of the company; the auditors were reappointed, and a vote of thanks to the chairman terminated the proceedings.

COLOMBIAN NORTHERN RAILWAY COMPANY, LIMITED.

INCREASED RECEIPTS—YEAR'S RECORD RESULTS.

The twenty-second ordinary general meeting of the Colombian Northern Railway Company, Limited, was held, on the 2nd instant, at 9 Bishopsgate, London, Mr P. C. Matts (the chairman of the company) presiding.

The secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said: In moving the adoption of the report and accounts, I congratulate the shareholders on the very favourable statement the directors are able to put before them. The comparative table given in the report shows an increase in the gross receipts over those of the previous year of £11,676 19s 4d, equal to 13.30 per cent., while the net receipts are up by £15,825 18s 3d, or say 33.91 per cent.; the respective figures for the year being, gross £99,473 4s 4d and net £62,497 8s 1d. These are the highest figures yet recorded by your company. They are principally due to increased passenger traffic, also, but to a relatively small extent, to the favourable rate of exchange at which it was possible to remit, owing to the appreciated value of Colombian currency as against sterling. During the year local staff salaries and wages of the workmen were advanced, and while the cost of imported material required for renewals, &c., was greater, yet the percentage of working expenses is but 37.22, as compared with 46.84 for the previous year, giving a reduction under this heading in sterling of £4,148 8s 11d. As you are aware, your line is favourable to low working costs by reason of the track being fairly level, that it has its own ballast pit, and that practically half of the receipts are derived from passenger traffic. In spite of this, I think great credit is due to the local staff, who, under the very able administration of your managing director, Mr Carlos Davila, are responsible for the efficient and economical manner in which your line is worked.

REPORT ON THE CONDITION OF THE LINE.

That the permanent way, rolling stock, and buildings have been well maintained is confirmed in an independent report issued by Messrs Pirkis and Kidd, an English firm of engineers, whose partner, Mr Pirkis, in company with your managing director, inspected the line in September last, and reports as follows:—"During the course of the journey from Bogota to Nemocon frequent stops were made en route to inspect bridges and other points of interest. The permanent way was found to be in very good shape. About two-thirds of the line has been re-ballasted with broken rock ballast, and relaid to line and surface, and presents a very good appearance, a section from km. 37 to Cajica station calling for particularly favourable comment. The journey was made at an average speed of 40 kms. per hour, and the running was remarkably smooth. The track is very well sleepered up, the ties being closely spaced, and a considerable portion of the ties replaced during the last few years are of lignum vitæ and cumula, two native hardwoods which are of great durability and give a good guarantee of substantial track.

THE TRACK.

"The track, which is of metre gauge, is laid with 40 lbs steel rails of excellent quality, which, notwithstanding the fact that they have been in use for from 22 to 25 years, show very little signs of wear or deterioration. The joints are in very good order, and the line as a whole shows very slight vertical deflections. Iron rails were found on some of the sidings, and were beginning to flake somewhat noticeably. The points and crossings are mostly of English type and manufacture, and in good condition. The iron bridge, 75 feet in length, across the Bogota River—the only bridge of any considerable length on the line—was inspected, and found to be in excellent condition. It was repainted about a year previously. Four cross girders were dented by a derailment some years ago, but this has in no way weakened the bridge. The culverts, of which there are 65, are mostly of a small open type, constructed of masonry, and are in good repair. The line is fortunate in possessing two excellent quarries, from which it obtains ballast under very economical conditions, the ballast consisting of a somewhat soft yellow sandstone, but of a quality hard enough to have warranted its use in the paving of the city of Bogota. Fencing in this country is not an obligation on the railway company concerned, but on the private owners of the land adjoining the railway, and the line is fenced almost in its entirety, except at points where it runs parallel to and practically upon the high road. The track lies generally upon good solid ground, and the little drainage that is required has been well attended to. On the dry Sabana upland weeding is a small item, and at the time that the trip was made the track was in exceptionally clean condition. The service of the line is carried on by telegraph and telephone lines laid on posts set up at about 65 metre intervals and kept in good repair. The locomotive water supply is obtained at five different points, well distributed along the line, and in quantities sufficient for the present moderate traffic. The tanks are filled by hand pumps drawing from small reservoirs underneath the tanks.

STATION IMPROVEMENT PLANS.

"There are six stations on the Northern Railway Company's line—namely, Bogota, Chapinero, Uribe, Caro, Cajica, and Zipaquira. These are solidly constructed in all cases of masonry, with tile roofs, and with accommodation sufficient for existing traffic except at Zipaquira and Bogota. In the case of the former, Mr Davila, the managing director, proposes to put up a new passenger station, leaving the existing one for freight, while at Bogota extensive alterations are planned to make room for the annually increasing freight traffic. The present passenger station, already far too small for the demands made upon it, will become the freight terminal, while it is intended to build a large new passenger station, about 100 metres west of the present one, on the plot of ground acquired for that purpose. Rather more than one-third of this plot will be allocated to the new station, about one-third to the projected new workshops, while the remainder will become a supplementary freight yard, giving about 500 metres additional siding accommodation. Other alterations will be made in the existing lay-out of the yard, including a new short leg to the 'Y' that will save considerable mileage in the turning of trains. The existing equipment is small, but contains the necessary machinery for making their own locomotive repairs, but not for turning locomotive and car wheels. As soon, however, as the contemplated new workshop is erected the line will be completely independent of outside assistance. The wood-working shops have turned out a number of very efficient car bodies for their passenger coaches. In the year 1919 the company transported 748,643 passengers, or a daily average of 2,051, whereas its daily carrying capacity would be 5,458 passengers, allowing for a double journey per day for each car, and discounting 10 per cent. for cars under repair. In the same year the company moved 86,320 tons of cargo, giving a daily average of 270 tons in a year of 320 days. Its maximum capacity would be 927 tons per day, allowing one journey per day per car and discounting 10 per cent. for cars under repair. The Colombian Northern Railway Company possesses 47 kilometres of sound track, 11 engines in service, 43 passenger coaches in good condition, 108 freight cars in fair condition (with another 18 new ones on their way), and a service of trains amply sufficient to cope with existing requirements. Furthermore, the management, by improving their road-bed and increasing terminal accommodation, are putting themselves in a position to handle any extension of business that may come to them from the North, as well as their own rapidly increasing freight and passenger traffic."

BALANCE-SHEET ITEMS.

I now call your attention to the balance-sheet. You will see that, under liabilities, sundry creditors stand at £21,285 17s 1d. The greater part of this amount has, since the date of the balance-sheet, been liquidated. The total nominal value of bonds redeemed to date is £16,540 first mortgage debenture bonds, and £6,125 second mortgage debenture bonds, and there remains available for further redemption £4,150 13s 9d and £2,770 6s 10d respectively. On the other side, under assets there is additional capital expenditure during the year of £26,143 3s 6d, which represents the cost of the site acquired for the new station at Bogota, and that necessary for the additional sidings. The land purchased is adjacent to the existing station, and was obtained at quite a fair price. The net revenue appropriation account shows that, after providing for interest on the first and second mortgage debentures, £15,382 7s 11d, making provision for the redemption funds, £6,767 7s 8d, and writing off the expenditure during the year for the replacement of rolling stock, £13,268 19s 5d, and passing £7,000 to the reserve account, there remains a balance of £47,603 1s 7d. Out of this amount your directors recommend that a dividend of 4 per cent., free of income-tax, on the share capital be distributed, absorbing £6,000, carrying forward £41,603 1s 7d, as against £36,049 1s 2d last year. Your board considered it inadvisable to declare a higher dividend, as all capital improvements must be met out of revenue, and at present this particularly refers to the building of the new station at Bogota. The annually

increasing traffic over your line, for which the existing station at the terminus was inadequate, made this extension imperative, and, in view of future developments, it was considered desirable to make provision in this respect for many years ahead. The investments have been reduced from £31,129 11s 1d shown in last year's account to £23,537 17s 10d by the sale of local securities, the purchase of which was a temporary investment. The sale was effected with a small profit.

THE POSITION IN COLOMBIA.

In the remarks from the chair at the general meeting of last year reference was made to the renewed attention which the Colombian Government was giving to the building of the extension of the Colombian Central Railway, which, as you know, is linked up with your line. In order to further the work, negotiations have been opened up with the Colombian Government through your managing director, and a proposal has been submitted in which your company undertakes to construct the projected line on behalf of the Government. The advantages which will accrue to your company from the completion of this extension are manifest to all. The economic situation in Colombia is to-day far from bright. The country is passing through a bad crisis, brought about by the curtailment of credits, the heavy fall in the value of coffee and other products, and the importation of an enormous amount of merchandise—far more than can be readily assimilated—with the consequent result that the balance of trade, which for 1919 was over 30 million dollars in Colombia's favour, is temporarily against her. Exchange follows in natural sequence. From recent cables received, the export of gold, which had hitherto been prohibited, is now permitted, and the exchange rates have gone more in favour of Colombia as a consequence. The traffic on your line being purely local, it is not expected that the unfavourable position I refer to will greatly affect its receipts. I now have pleasure in formally moving: "That the directors' report and statements of accounts to June 30th last appended thereto and now submitted be and are hereby received and adopted, and that a dividend of 4 per cent., free of income-tax, payable on December 4, 1920, be and is hereby declared payable on the shares of the company."

Mr E. A. Green seconded the motion, which was carried unanimously.

The retiring director, Mr E. A. Green, was re-elected, and Messrs Duncan, Belcher, and Co. were reappointed auditors.

Mr Frederick Belcher said he had no doubt that the staff on the other side would appreciate the vote of thanks which was usually accorded to them, and they certainly deserved it for the results they had been able to show on the past year's working, which must have entailed a considerable amount of skill and work on their part. He therefore proposed a cordial vote of thanks to the manager and the staff at Bogota, and he coupled with the motion a hearty vote of thanks to the chairman and directors for their services.

The motion was seconded, and unanimously agreed to.

The Chairman briefly acknowledged the compliment, and the proceedings then terminated.

BRITISH BANK FOR FOREIGN TRADE, LIMITED.

MR BIRCH CRISP ON PRESENT TRADE CONDITIONS.

OUR EXPORT TRADE AND ITS REQUIREMENTS.

The ninth ordinary general meeting of the British Bank for Foreign Trade, Limited, was held, on the 30th ult., at the offices, 48 Bishopsgate, London, Mr Charles Birch Crisp (chairman of the company) presiding.

The secretary (Mr John C. Crocker) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, this meeting is to be followed by another to consider the proposals which were circulated among the shareholders ten days ago. If the subsequent meeting adopts the resolution to be submitted thereat, I trust that the shareholders may be asked at the next annual meeting to be held to approve the distribution of a dividend. The accounts submitted for your approval cover a period of transition from war to peace conditions. The bank's activities revolve about overseas trade. Peace still limps along the highways of commerce, and the purchasing power of vast continents is lamentably small. Cities such as Vienna, Buda-Pest, Prague, Lodz, and Odessa, which before the war enjoyed substantial credit on the London market, have not yet liquidated any part of their debt to accepting houses. The exchanges exhibit fantastic movements in progressive demoralisation.

RETURN TO NORMAL TRADING.

There are, however, some signs of a return to normal trading. Russia is to be reopened to trade. Despite the view held by those who feared that contact with Bolshevism would spread political contamination, this bank has not ceased to urge upon our own Government Departments the pressing necessity for a resumption of trade with Russia. The trade of the United Kingdom is languishing, because Europe lacks the stability which goes with settled peace. European unrest has disorganised the trade of the British Empire. Until Russia, Germany, and the other Continental States can absorb the surplus products of the colonies the outlook for British manufacturers is bad. Tea, rubber, wool, and the raw products which constitute the wealth of our colonies are accumulating here, and the fall in values may involve many traders in bankruptcy.

NEED FOR UNIMPEDED TRADE WITH CONTINENT.

Exporters can no longer sell bills upon Australia, New Zealand, South Africa, or India, which is tantamount to saying that they cannot be paid for the goods awaiting shipment. Partial relief has come since this country began to import freely dyes, clocks, and various other goods from Germany. We can afford to buy the articles enumerated because we earn large amounts by rendering services to world commerce, and we must take the premiums paid for covering insurance risks or the turns got by our merchants and brokers in goods. The sterling credits resulting from such importations enable German houses to buy colonial produce in the London market, the sale of which permits colonial buyers to take goods from our manufacturers. To raise obstacles against the free importation of Continental goods is to intensify the difficulty which already hampers trade with our colonies.

FOREIGN LOANS' EFFECT ON EXPORTS.

The export trade is further restricted because the London market is almost closed to the issue of foreign loans. It is a truism that the amount of such loans is taken out in goods. In pre-war days those thrifty people who bought foreign Government bonds created a credit which enabled the foreign buyer to pay cash to British manufacturers and exporters. Nowadays, what the tax collector leaves in the pockets of an impoverished citizen, apart from colonial loans, is diverted to loans involving expenditure upon domestic improvements. Road-making and the construction of new houses may be necessary, but the disparity between the dollar and the pound sterling, which accentuates the cost of living here, with all its attendant evils, cannot be remedied until exports grow in volume as well as value.

GOVERNMENT INTERFERENCE IN INTERCHANGE OF BONDS.

The unwisdom of Government interference with free interchange of bonds as well as commodities is exemplified by conditions in Canada. The authorities there supposed that the purchase by Canadians of Canadian bonds quoted on the London market diminished the resources of Canada. They prohibited the importation of bonds, and the result is that Europe's purchasing power of Canadian grain is lessened. A slump in the value of Canadian produce has followed, and everybody suffers. If Canadian investors had been permitted to follow their natural inclination to buy back on very advantageous terms the bonds placed abroad formerly, Canadian farmers would have been enriched.

The great war was an evil thing; overtaxation is an evil, but Government control of commerce strikes at civilisation itself. The fruit of such interference is ripening in Russia.

The report and accounts were unanimously adopted, and at extraordinary general meetings which were afterward held resolutions sanctioning the reorganisation of the capital were unanimously agreed to.

ORIENT STEAM NAVIGATION COMPANY, LIMITED.

THE CHAIRMAN ON THE FUTURE OF BRITISH SHIPPING.

The twenty-first ordinary general meeting of the Orient Steam Navigation Company, Limited, was held, on the 29th ultimo, at 13 Fenchurch avenue, London, Sir Kenneth Anderson, Bart. (the chairman), presiding.

The secretary (Mr E. A. Veale) having read the notice convening the meeting and the auditors' report,

Sir Kenneth Anderson, Bart., in the course of moving the adoption of the report and accounts, said that, after providing for depreciation, and including the sum brought forward from last year, the revenue account showed a credit balance of £261,346, being slightly more than last year's balance, which was £254,574 2s 9d. From this fell to be deducted the dividend on the preferred shares, and out of the balance the managers proposed to pay a dividend on the deferred shares of 15 per cent., free of income-tax (the same as last year), and to transfer £100,000 to the general reserve account, leaving £68,677 to be carried forward. Further, they proposed to transfer to the general reserve account the sum of £100,000 from the contingencies account and £50,000 from the underwriting account, bringing the general reserve up to £1,000,000. The managers were of opinion that, after making these transfers, the balance at credit of contingencies and underwriting would be entirely adequate to meet eventualities, and their

purpose was to facilitate the definite capitalisation of £520,440 of the general reserve, this amount being applied to paying up deferred shares for distribution to the present holders. In the balance-sheet the book value of the fleet, plant, and investments showed an increase of £767,110 14s 7d, represented by growth of investments, as against a shrinkage in cash, and the proceeds of the new ordinary shares issued since last year. The stores increase of £29,162 reflected higher prices and an enlarged service, whilst the small increase in sundry debtors was purely accidental. On the other side of the account, the deferred shares were higher by the £346,710, proceeds of new shares subscribed for; and they had had a spurt of £88,150 in redemption of debentures, resulting from an invitation to the holders to tender for redemption. The new issue and allocation of deferred shares had not the remotest connection with the present fortunes of the company. They had accumulated considerable reserves by a policy of self-denial in dividends over a long period of years, and by that means alone had they been able to provide the continuously growing volume of capital required for the business.

COSTS OF RUNNING AND NEW CONSTRUCTION.

If he was not able last year to take a sanguine view of the future of British shipping, he was still less able to do so now. The costs of running and of new construction continued to represent more than three times the pre-war level, and though there was a pause in the race upwards, and it was even permissible to hope that the tendency towards decline perceptible elsewhere might extend to shipping, at present there was no evidence of its doing so. The ratio of advance in their saloon rates was still far short of the ratio of advance in costs, and far short of the mileage charge on the other chief ocean routes. Yet it was this moment which was chosen to threaten shipowners with an eight hours day at sea. If it were imposed, the result would be an almost disastrous embarrassment in the conduct of the passenger business. At best, one of two things must happen—fares must rise to a prohibitive level, or passengers must be content to fend more for themselves, and to accept a much inferior standard of service.

PROBABLE RESULTS OF THE PROPOSED EIGHT-HOUR DAY.

The revolutionary effects of the change were sufficiently indicated by the estimate that on a ship of 16,000 tons it would involve directly and indirectly additional running costs of about £7,000 a month. Should fares be forced up to a prohibitive level, the ocean, instead of being a highway, would become a barrier to intercourse and to the mobility of labour, which in the past had been the most effective remedy for unemployment. It would no longer unite, but separate the Empire. The shipowner's chief need to-day was lower costs as a condition of lower charges, and this was particularly true of the Australasian trade, because it was the longest. Until they could effect big economies in costs, there was nothing for it but to economise in the provision of facilities and the standard of comfort. Above all, they must economise in speed. It had been said that the war had set us back a generation in the progress of ocean travel. He doubted whether this was an overstatement, and under present conditions or anything approaching them it was, he believed, perfectly idle to contemplate schemes for enlarged and greatly accelerated services. Without subsidy they would be impossible; with subsidy the cost, both to the State and to the passenger, would be ruinous.

The report was unanimously adopted, and at an extraordinary general meeting a resolution was passed increasing the capital of the company to £3,750,000 by the creation of 150,000 new deferred shares of £5 each and capitalising £520,440 of the undivided profits, this amount to be applied to paying up deferred shares to be distributed to the holders of the present deferred shares in the proportion of one new share for every share held.

SOUTH AFRICAN DIAMOND CORPORATION, LIMITED.

SPLENDID RESULTS OF YEAR'S TRADING.

CONDITION OF THE INDUSTRY.

EXTENSION OF DIAMOND-CUTTING SCHEME.

ISSUE OF SHORT TERM NOTES PROPOSAL.

The seventh ordinary general meeting of the South African Diamond Corporation, Limited, was held, on the 30th ultimo, at the works of the National Diamond Factories (Bernard Oppenheimer), Limited, Lewes road, Brighton, Mr Bernard Oppenheimer, the chairman of the company, presiding.

The secretary (Mr E. J. Jenkinson) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and Gentlemen,—Before starting the business of the meeting, it is my sad duty to refer to the death of one of your directors, my partner and friend, Senator Marks, who can ill be spared. He it was who started all manner of industries in South Africa, and I am sure that posterity will allot to him a foremost place as one of the pioneers of industry in South Africa, and I would ask you to join me in submitting a vote of condolence to Mrs Marks and family. The report and accounts for our financial year ended June 30th have been sent to you some time back, and, with your permission, I propose that they should be taken as read. I have only just lately recovered from a serious breakdown, and although I have now recovered my usual health, my medical adviser does not want me to overtax myself. I must, therefore, crave your indulgence, and ask you to permit my son to read my speech.

INCREASE IN PROFITS.

Captain C. M. Oppenheimer accordingly read the chairman's speech, which was as follows:—"It gives your directors great pleasure in again being able to place statements before you which show another big advance on the previous years' results. You will see that the profit earned for the year is £131,306 10s 1d, against a profit of £44,472 3s 4d for the year 1919. The issued capital of your company up to December 31, 1919, was £100,000, and a further issue of 200,000 shares took place on January 1st this year. Thus, the profit of £131,000 odd for the 12 months was made up to December 31, 1919, on a subscribed capital of £100,000, and for the remaining six months of the financial year on the increased capital of £300,000. I am sure you will consider this result satisfactory. The issue of the 200,000 shares itself on January 1st of this year was a great success, and as this issue was only made to existing shareholders, I think your directors can take this as a vote of confidence in their management. As you are aware, these 200,000 shares were issued to you at a premium of £1 per share; the premium of £200,000 has been placed to reserve account, thus strengthening your company's position very considerably. The cash on hand and your shareholdings exhibit a strong position. The big increase over last year in shares in other companies from £257,181 3s 5d to £773,652 8s 6d is almost entirely due to the investment of £400,000 in pound shares in the National Diamond Cutting Factories, about which I will have to say a few words later on.

COMPANY'S SOUND INVESTMENTS.

"The auditors' statement attached to the accounts proves to you that, although there was an enormous depreciation in all classes of securities, your investments only showed a depreciation of a little under 1 per cent. Since then it is quite true values have further fallen, but our investments are more or less permanent ones, and as we do not deal in and out with them, a fall in the value of the securities will not interfere with the dividend-paying capacity of your corporation, as the intrinsic value of our assets is not affected. You have left an undivided profit of £55,088 9s 2d for the year under review. This is, however, subject to excess profits duty, and it is this point which is receiving the very serious consideration of your board The business of the corporation, although a certain slackness in all trades has set in, continues to be of a profitable nature, and it is with the utmost satisfaction that I am able to state we are in a position to keep up our dividends of 50 per cent. per annum, if we are not mulcted in heavy excess and other duties. In fact, your board are confident of being able further to increase materially the prosperity and consequently the earning powers of your corporation.

THE DIAMOND MARKET.

"The diamond market, although it is at least 30 per cent. higher than when I addressed you last, is at the moment very slack, but prices are being held, not artificially, but for the simple reason that the returns of rough diamonds are not overtaxing the market. The present slackness is attributable, in the first place, to the various labour troubles and the general unrest that has taken place all over the world, but with over 40 years' experience of the trade behind me, I am emboldened to say that there is nothing wrong with the diamond market at all, and that it will recover its old buoyancy in the near future. Very few people understand that there is really at all times a scarcity of diamonds—diamonds do not grow like potatoes, for instance, and are not quite as plentiful as people who read about them in the papers imagine. To show you my meaning, I want to give you an illustration. The drink bill of Great Britain alone is £400,000,000 per year, whereas the whole yearly diamond production, which supplies not alone Great Britain, but all the world, is only a mere £16,000,000.

DIAMONDS AS AN INVESTMENT.

"The purchasing public here, in America, and everywhere else, should know this, and should have their attention drawn to the great advantages of precious stones, and especially of the diamond as an investment. There is an old saying that every man has his day. Equally true is it that every man has his hobby. It may be pictures, books, horses, live stock, poultry, or game. Whatever it is, he takes it up because it gives him personal delight, and also because at the back of his mind he considers his own special hobby a sound investment—either a commercial investment, or, if I may coin a phrase, a pleasure investment. The diamond should be equally advertised and publicised. It scintillates, it fascinates, it beautifies, and adorns, and at the same time it is really an absolutely sound investment—an investment without bulk, and easily negotiable. I believe that if this investment side of the diamond were only more generally emphasised, it would not be long before producing companies of the precious gem would have to look round to find more diamond mines to satisfy the demand.

"During the first nine months of the year under review there was an unprecedented demand for diamonds, and your directors took full opportunity of this to increase the profits of your company. I have already mentioned the chief cause of the present slackness in the trade. It was naturally to be expected that 'boom' conditions could not last for ever, and a reaction was inevitable after such remarkable activity. At the same time, it must be borne in mind that the diamond trade is a most stable industry. It is, of course, a luxury trade, but the diamond business has been going on steadily for the last fifty years, and will continue to flourish during the next fifty years. There are always dull times, but I think I may venture to say that at the present time the industry, although slack, was never in a more healthy condition.

E.P.D.

"The statements of the Chancellor of the Exchequer and the increase in the excess profits duty which were brought into effect from April of the present year, despite the promise made that this duty would be reduced if not abandoned altogether, did, as you are all well aware, lead to a considerable slump in all the produce markets, with the natural result that people generally are not inclined to spend money on personal luxuries until an improvement in trade generally sets in. The action of the Government as far as the excess profits duty is concerned is, of course, one of vital importance to us, and your corporation is particularly affected. Your company was floated in 1913. Any new enterprise requires to do a lot of ground-work before it can show good results. We were no exception to this rule. Our profits for the first year on the then capital of £100,000 were £10,000; consequently the standard allowed us is very small. I do not propose to weary you with a long dilation on the subject, but I would add my own complaint, in common with numberless others who control large industries founded during recent years, and who are mulcted in very heavy taxes, while old-established firms are allowed to get off scot-free. I believe I am right in stating that the excess profits duty has been the greatest cause of the present high cost of living, which, in turn, has brought about the serious labour disturbances from which the country

has suffered so severely during the past year. It is to be hoped that the Government will listen to every business man's just complaint on this point and repeal this most unjust and iniquitous tax.

DIVIDEND—BOARD'S CAUTIOUS POLICY.

"I have already told you that we will be able to keep up our 50 per cent. dividend if we are not taxed unfairly. I have also told you that although business is slack we are making profits. As, however, we are not able to tell you what the taxation we have to pay is likely to be, your board are somewhat in the dark as to what would be the fairest way of dealing with declarations of dividends. The views of my colleagues are, or I should say were, that we should postpone the payment of any dividend until June 30th, as before we know what we have to pay to the Government they consider we should not deplete our cash resources. As, however, I do not wish the shareholders to be disappointed, I have proposed to my co-directors, and they have agreed, that we declare a dividend to-day at the rate of 25 per cent. per annum for the six months ending December 31st, and if you confirm this at to-day's meeting dividend warrants will be posted to you on December 31st next. I hope that at June 30, 1921, the position of affairs generally, so far as taxation is concerned, will have improved, so that we are enabled to pay you the usual dividend of 50 per cent. per annum, and the remaining 25 per cent. which we are now proposing to keep in reserve for eventualities.

THE DIAMOND-CUTTING WORKS.

"I now want to say a few words about the diamond-cutting works in which you hold an interest of 30 per cent. The directors' report states, and states, to my mind, quite correctly, that this investment will be a very paying one for you in the near future. I am glad that so many shareholders have found it convenient to come here to-day and to look over the works. I may say that so that you should get a thorough grip of affairs, and of how we conduct our establishment here, we have not given instructions to alter anything, and have made no special arrangements for you, and I hope you have enjoyed your visit, and that you are able to agree with me that we have founded a wonderful industry which will outlive us all. I hope there are some diamond experts among you who have been able to follow the technical part of our works, and I shall be very pleased to elucidate any points you wish to raise hereafter. I personally can tell you that I am more than pleased with the progress we have made, and I can also tell you that our diamonds find a ready sale all over the world. I am pleased to report that, although we may from time to time have a little trouble with the men, the pleasantest relations exist between them and the management, and between them and me personally, and the managers, as well as myself, are at all times most anxious to meet the men and to discuss with them any imaginary or real grievances. I want to repeat here what I have told you the last two years, ever since we have started this diamond cutting—that we are not competing or intending to compete in a harmful way against our Continental competitors, and that, moreover, we have made arrangements with the Continental Union of Diamond Cutters that we all come into line. If I say that we have all come into line I want to bring this a little further, and to state that really the Continental Union of Diamond Cutters has come into line with us. They held meetings in London during the month of August, and the Dutch, Belgian, and American unions were represented in the first instance. The chairman of the Dutch Union, Mr Henri Polak, approached me, and asked me whether I would allow our men to affiliate with their union, to which I gave an unqualified and ready assent. Two of the important points were a 44-hour working week and a week's holiday per year at full pay. We had granted this to our workmen a year ago on our own initiative. I am therefore right in stating that the foreign unions came into line with us.

ISSUE OF SHORT-TERM NOTES.

"I want to point out to you that this diamond-cutting scheme is capable of great extension, and so as to be able to carry out this extension we are going to the public for a further £1.000,000 in 8 per cent. six-year convertible secured notes at par, which notes will be exchangeable any time before January 1, 1924, into shares at par, or they will be paid off after Jnauary 1, 1924, in three yearly instalments as follows:—

	£
1924	400,000
1925	300,000
1926	300,000

We require this money to enable us to give work to the 2,000 men we contemplate taking on, 700 of whom are now in our employ. You will quite understand that we have to keep a large stock of diamonds, and we also want to be in a position to take advantage of any market which may enable us to buy the raw product, if not cheaper, anyhow better selected than we could get it in a market where everyone falls over each other to secure the rough article. The heads of the diamond works, Dr Burnie, our general manager, and Mr Thielmans, our works manager, have again done good work. Our medical department, under the control of Colonel W. L. Watt, C.M.G., you have all seen, and this department speaks for itself. Now, with regard to our workmen, you have all had an opportunity of watching them at work, and you have seen the conditions under which they are employed. As far as the wages are concerned, I recognise one thing, and that is that every man has the same right as I have, or as you have, to earn as much money legitimately as his capacity of work entitles him to, and in the furtherance of our work this will be our guiding principle. We do not care a bit what a man earns so long as he shows us a profit, and we hope in a few years' time to spend a minimum of between £600,000 and £1,000,000 in wages. I believe the scheme, as I have already mentioned, is capable of great extension, and I as well as my co-workers will do our best to bring about this extension if we get the loyal support of our shareholders. The scheme which I have outlined to you will be advertised shortly, and shareholders on the register of our corporation will receive priority in their applications for these notes.

NEW INVESTMENTS IN SOUTH AFRICA.

"Your directors have lately taken up some new interests in South Africa, which promise fair results, and, as you will have learned from the report, three of your directors—myself, Mr Rowsell, and Colonel Watt—are proceeding in January to South Africa, where they will thoroughly investigate the position, and have an opportunity of consulting with the experts who have reported upon the business offered to us. If we are satisfied that the reports we have received are fully justified, I think we may consider that we have secured interests which will raise your company from the important position it now enjoys into a premier position in the world of commerce. Of course, this undoubtedly would mean a further extension of capital, but any proposals with regard to this will not be placed before you until we have absolutely clear evidence as to the value of the interests which we have secured."

The Chairman then formally moved the adoption of the report and accounts.

Mr C. F. Rowsell seconded the motion, and the Chairman having replied to questions, it was carried unanimously.

The payment of the dividend already distributed was unanimously sanctioned.

The election of Mr Barnet Lewis and Col. W. L. Watt, C.M.G., as directors was confirmed, and the retiring director, Mr J. Van Praagh, was re-elected.

The auditors, Messrs P. L. Ellis and Co., were reappointed.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr A. E. Roberts proposed a hearty vote of thanks to the chairman, directors, and staff here and in South Africa. In doing so he said he wished to express the sincere thanks of the shareholders for the services rendered to them during the past year. The report which had been presented was magnificent, and the chairman's statement had been both lucid and comprehensive. Their interests, in the hands of the chairman and his colleagues, were, he was sure, quite safe. He especially appreciated the open, candid, and frank statement the chairman had made.

Mr W. A. Perry, in seconding the vote, said that he did so with great pleasure, because he recognised that the chairman of the board was not only looking after the interests of the shareholders, but also after the interests of the disabled soldiers. It had been a great pleasure to go round the model factory in which the meeting was being held, and to see the splendid way in which it was set out. It was not only a commercial proposition, but it was introducing into this country an industry of national importance. It was the first time in his experience that the diamond cutting industry had been successfully introduced into this country. It had been tried twice in Birmingham during the war, but on each occasion unsuccessfully. In their case it had been thoroughly established, and not only provided work for disabled soldiers who were unable to follow their ordinary occupations, but gave them a trade which they would be able to follow all their lives.

The vote was unanimously accorded, and the Chairman having acknowledged the compliment, the proceedings terminated.

UNITED RAILWAYS OF THE HAVANA AND REGLA WAREHOUSES, LIMITED.

AMALGAMATION SCHEME APPROVED.

The twenty-third ordinary general meeting of the United Railways of the Havana and Regla Warehouses, Limited, was held, on the 2nd instant, at Winchester House, Old Broad street, London, Mr C. J. Cater Scott (chairman of the company) presiding.

The London manager and secretary (Mr W. J. Maslen) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that, whilst their gross traffic total increase was no less than £555,000, the result of the working for the year showed but very little improvement. The increase in the gross traffics was very largely accounted for by the increased tariff which the Cuban Government had granted them. The Cuban Government had wisely perceived that to meet the heavy increase in working expenses, which all railway companies had to meet to-day, an increase in tariffs was necessary if a satisfactory service for the public was to be provided. As to their traffics, there had been the extraordinary increase in the number of passengers carried of from 12,000,000 to 15,900,000, which proved that the people of Cuba had had a lot of extra money in their pockets. In goods the position was not quite so satisfactory so far as tonnage was concerned, but in point of earnings there was the satisfactory increase of £169,000. Working expenses had increased by £535,000, so that the extra profit resulting from the increase in gross takings was but a beggarly £19,000. Since the general manager's report was sent home, a further increase in wages had had to be granted, but he was glad to say that the Cuban Government had again met the company generously, and had authorised an increase of about 10 per cent. on the tariffs, which would come into force after December 12th next.

THE DIVIDEND.

He was aware that there had been some disappointment that the board had not been able to declare a larger dividend than 7 per cent. for the year. The directors would gladly have done so, and at one time they actually thought that they would be able to give the shareholders something more, but with the heavy increase in expenses and the financial crisis in Cuba they had come to the conclusion that it would be much wiser to conserve as far as possible the resources of the company. He was sure the shareholders would agree that it was a most conclusive reason for acting with great prudence. As they knew, the company owned no less than 99 per cent. of the ordinary stock of both the Western Railway of Havana and the Cuban Central Railways, and 50 per cent. of the preference stock of the latter, the Western Company having no preference stock. The "Western" paid its usual 7 per cent. with a small increase in the carry forward, and the Cuban Central paid 4 per cent., while placing £145,000 to reserve. Since this company had obtained control of these two lines, both had been brought under the general management of the "United." All three railways had undoubtedly benefited very considerably from central management, but they had not reached, in the opinion of the board, the full benefits which would have resulted had there been but one company.

NEED FOR FUSION.

The board thought the time had come when an actual fusion was desirable in the interests not only of the "United" but of the other two companies. There would be a very large benefit in the actual working and also considerable economies. Their general manager, while not committing himself to figures, had expressed his belief that the economies to be effected would be very appreciable indeed, while the Government of Cuba had also recognised the advantages of a fusion of the three companies. As to the immediate future, the traffics of the combined companies to November 27th last were £2,078,000, or an increase of £305,000. A telegram had been received from the general manager saying that the cane throughout their zone showed excellently, and in normal conditions a larger production by from 10 to 15 per cent. might be expected, but that the moratorium, combined with the late rains, would delay the commencement of crushing, which would not be general until well into January. Their general manager concluded that, in spite of the difficult situation now ruling in Cuba, they would carry quite as large a tonnage of sugar as in the previous year. Generally, they might regard the position as satisfactory.

Sir Henry Mather Jackson, Bart., C.B.E., deputy-chairman, seconded the resolution, which was carried unanimously.

The Chairman moved resolutions approving the scheme of amalgamation, approving the increase of the company's capital to £11,015,000 by the creation of 55,000 preference shares of £1 each, altering the articles to increase the board's borrowing powers and in regard to the board's remuneration.

The resolutions were adopted, and the proceedings terminated with a vote of thanks to the chairman and directors and to the officers and staff.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.

RESULT OF THE POLL.

Mr J. H. Batty (chairman of directors) presided over three meetings of the African and Eastern Trade Corporation, Limited, which were held at the Exchange Station Hotel, Liverpool, on Friday, the 26th ultimo, for the purpose of confirming resolutions regarding the fusion of the company's interests with Lever Brothers' West African interests, also to meet the requirements of the Chancery Court.

All the resolutions were adopted with an overwhelming majority. A poll was then demanded.

The African and Eastern Trade Corporation, Limited, now officially announce the result of the poll which was demanded at their meeting on the 26th ultimo, and which is as follows:—The total number of ordinary shares held by persons attending the meeting or voting by proxy was 2,771,657, and of these, 2,459,618 voted in favour of the scheme, being over 88 per cent. of the whole, whereas only 75 per cent. was required.

CONSOLIDATED GOLDFIELDS OF SOUTH AFRICA, LIMITED.

CONDITION OF COMPANY'S MINES.

COMPANY'S INVESTMENT POLICY.

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 2nd instant, at the Cannon street Hotel, London, Lord Harris (the chairman of the company) presiding.

Mr H. G. Sidgreaves (joint secretary) having read the notice calling the meeting and the auditors' report,

The Chairman, in the course of his speech, said that the report this year contained not only particulars of the Consolidated Gold Fields of South Africa, but, as the assets of the company, with a few exceptions, were transferred to the New Consolidated Gold Fields, Limited, in accordance with the resolution passed on July 31st last year, the directors felt, in order to give the whole story of the year's business, that they were bound to furnish shareholders with the report and accounts of the latter company.

YEAR'S RESULTS.

The position was that the old company—the holding company—carried on for three months, after which the new company—the operating company—continued for the remainder of the year, but there was a short period from the date when the new company commenced trading up to the date when the assets were transferred during which the transactions of the two companies overlapped. The total manage nent cost for the year—that was, for the first three months of the old company and the remaining nine months of the new company—amounted to £39,168, as compared with £22,075 last year, or an increase of £17,000 odd. This was accounted for by increased remuneration to the employees and work which they had had to do in the building. On the other side they had dividends, profits, &c., amounting altogether to £590,952, which compared with £572,141 odd last year. The revenue from dividends had increased, but the profit on sales of investments was slightly less than that of last year. Still, they could not complain of markets. They had taken the opportunity of good markets to realise some of the company's South African mining holdings, and had reinvested largely in industrials, which policy the shareholders approved when the new company was formed. There remained a balance of £488,161 odd, against which £165,408 had been charged for depreciation and £21,946 odd representing the cost of the formation of the new company. A provision had been made for corporation profits tax, income-tax in South Africa and America, and out of the balance remaining a dividend of 6 per cent., free of tax, amounting to £270,000, had been paid by the new company to the old company. That left a balance of £20,528 odd to be carried forward. The company's position was not as liquid as they had been accustomed to see it in past years, owing, of course, to the fact that they had had good opportunities for investment. It was, however, at the date of the accounts approximately £750,000.

WISDOM OF INVESTMENTS OUTSIDE S.A.

With regard to general subjects, he supposed if there were any who doubted the wisdom of the change by which the directors were given full power to invest outside as well as inside South Africa, and in other investments besides mining, they must now acknowledge after the catastrophes of the last 12 months that the change was fortunate, even if not wise. He claimed, of course, that it was wise, because although it was impossible to foresee such a calamity as the burning of Knight's Deep Mill, it was wise because they could not ignore the extremely hazardous conditions under which low-grade mines were working, having regard to the paucity of native labour and the increased costs all round. In accordance with their usual custom, the directors had asked their representative in Johannesburg to cable the latest news for the information of shareholders, and they would be glad to hear that he cabled an excellent

report on the present condition and prospects, both of Sub-Nigel and Robinson Deep Mines.

SUB-NIGEL AND ROBINSON DEEP MINES.

As regards Sub-Nigel, the recent development in the "C" shaft area indicated that sufficient payable ore could be opened up in that area to supply the mill, which would enable the ore reserves to accumulate in all the other areas where development was going on. As regarded Robinson Deep, the intersections of reef in the cross-cut at a depth of 3,700 feet were very good indeed, and a most important indication was the fact that the south reef, which had hitherto not been reckoned upon at all at this depth, had shown values of 7 dwt over 58 and 65 inches, whilst the main reef leader had shown values of 13 dwt over 67 inches and 9¾ dwt over 52 inches. There was thus a distinctly hopeful ring about the prospects of these two mines.

COMPANY'S OTHER INTERESTS IN AFRICA, AMERICA, AND WEST INDIES.

The Chairman then referred to other mining ventures in South Africa, including diamond and coal, in which the company was interested, and for which there were good prospects. With regard to West Africa, the Gold Coast Amalgamated had paid dividends, and, so far as the directors could see, it was likely to continue to do so. Referring to the company's interests in America and the West Indies, he said that the latest cable advice with regard to the American Trona Corporation was that during the month of November there was an estimated production of high-grade potash and refined borax of 1,620 tons, which was 50 per cent. above the monthly average for the eight months referred to in the annual report.

PRESENT PROSPECTS.

Undoubtedly at the moment many things were looking very dark. Markets were disappointing, trade was slackening, and there were further threats of strikes, but he expected that they would muddle through somehow—certainly as well as, and probably a good deal better than, most countries.

He observed that it was the fashion for chairmen at annual general meetings to give their opinions on the remedies which they thought were best for the unsatisfactory condition of national affairs. He would not pretend to do that. He certainly would not deal with the complicated questions of exchange and parities and the relations of gold and of currency, but he did think he might hazard the remark that one of the causes—perhaps the chief cause—of the general depression was that they were being driven to attempt to pay off debts more quickly than they could afford to. They were suffering from an ambitious Chancellor, who, to paraphrase Lord Beaconsfield, "is inebriated with the exuberance" of economical virtue. If he would curb his ambition and allow them to throw a larger portion of debt on to posterity, he could not help thinking that a very much more optimistic view might be taken of their position.

He then moved:—"That the report of the directors and statement of accounts and balance-sheet to June 30, 1920, and the recommendation of the directors that a cash dividend of 7½ per cent., free of income-tax, be paid on the 2,000,000 ordinary shares of the company be adopted."

Mr S. Christopherson seconded the resolution, which, in the absence of question or comment, was carried unanimously.

The Chairman next moved the re-election of the retiring directors, Sir Leigh Hoskyns, Mr R. Maguire and Major H. L. Sapte.

Mr E. Birkenruth seconded the motion, which was unanimously agreed to.

The auditors (Messrs Turquand, Youngs and Co.) were reappointed, on the motion of Mr Elder, seconded by Mr Rains.

The proceedings then terminated.

UNION COLD STORAGE COMPANY, LIMITED.

COMPANY'S SATISFACTORY PROGRESS.

The twenty-third ordinary general meeting of the Union Cold Storage Company, Limited, was held, on the 29th ultimo, at Winchester House, London, Mr Roger P. Sing (the chairman) presiding.

The secretary (Mr Edward Hinchliff) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: From the accounts you will have seen that the company still continues to make the usual satisfactory progress, and I have pleasure in telling you that the volume of the company's business is still increasing. In these unsettled times the interests of your business require special care and attention, and I think we are justified in feeling satisfied with the results which have been obtained.

If you will refer to the balance-sheet, you will notice that, including the amount brought forward, we have a balance of £368,586 to deal with, which enables us to pay the interest on the debenture stock, the dividends on both classes of preference shares, to provide for head office expenses, and to leave a balance of £180,493. Out of this we have set aside £78,776 to the depreciation reserve, and your directors recommend the payment of the usual dividend of 10 per cent. on the ordinary shares, leaving £71,716 to be carried forward, as against £51,066 brought in from the previous year.

We have for the year 1919 purchased and cancelled £53,780 debenture stock, and we have also during the year reduced the outstanding mortgages by £12,150. As you will at once recognise, these payments improve the position of the company. Up to date we have redeemed debenture stock for a total nominal value of £481,206, and also reduced our specific mortgages by £77,950. The depreciation reserve now stands at £562,753. I do not know that there is anything further in the accounts which calls for special attention.

The period under review is the twenty-third year of this company's operations, and the business during each of these 23 years has shown a consistent and substantial progress. You will see from the accounts in your possession that the year 1919 maintains a good record

BOARD'S SOUND POLICY.

We are, in common with other businesses, passing through a period which calls for quite exceptional care and foresight in the management of your affairs. The consistent policy of your board of meeting in advance the requirements and convenience of our customers, and giving them the whole benefit of our experience, will stand the company in good stead, and will, I have no doubt, ensure our continued progress and prosperity. I need hardly mention to you that the management realises its responsibilities in connection with the enormous value of goods our customers leave with us, and one of the secrets of our success lies in the fact that we specialise in the cold storage business, and have made a constant and successful study of what is necessary, not only for maintaining in perfect condition the produce entrusted to us, but also in affording to our customers those many facilities which we are particularly able to render them.

You may rest assured that your board will continue to be inspired by the same policy, and will, to the best of their judgment, see that the business of this company is developed on the same broad, safe, and progressive lines as hitherto, and I may say that your directors have already authorised several extensions of the company's business, and have in view certain other developments which they think will considerably assist and strengthen our position.

CURRENT YEAR'S PROGRESS.

It is my usual practice to refer at these meetings to the current year, and I am pleased to be able to tell you that the results, so far, show that the company's rate of progress has been fully maintained, and I have no doubt that when the company's accounts for the year 1920 are put before you, you will be perfectly satisfied with the progress they reflect.

It may interest you to know that there are now on the company's share and debenture stock registers a total of over 18,000 holders. It is a source of strength to the company that its securities should be so widely held, and I take this opportunity of welcoming the new shareholders that have recently come on our registers.

Mr Thomas B. Horsfield seconded the motion, which was carried unanimously, and the dividend recommended was declared.

The retiring directors (Sir William Vestey and Mr T. B. Horsfield) were re-elected, and Messrs Deloitte, Plender, Griffiths, and Co. were reappointed auditors.

A hearty vote of thanks to the chairman, directors, and staff concluded the proceedings.

ANSELLS BREWERY, LIMITED.

PROPERTIES NOW NEARLY £1,100,000 IN VALUE.

At the twentieth annual meeting of shareholders of Ansells Brewery, Limited, held at the Queen's Hotel, Birmingham, on Friday, November 26th, Mr Edward Ansell (chairman) presided. The report showed that the net profits for the twelve months ended September 30th was £120,780, to which was added £69,065 brought forward. The sum of £42,062 had been paid in debenture interest and in interim dividends. It was recommended that a final dividend of 5 per cent. per annum (less tax) be paid on the preference shares, and at the rate of 12 per cent. per annum on the ordinary shares, free of tax, making, with the 8 per cent. interim dividend, a dividend of 10 per cent. for the year.

The Chairman made reference to the loss the firm had sustained by the death of Mr Harry Ansell, who had been chairman for 18 months. He added that Mr Thomas Ansell, the new deputy chairman, had been connected with the company for over 30 years, and for the past 13 years as managing director.

"A STRONGER POSITION THAN EVER."

The Chairman added that the company had always maintained a good dividend, and was to-day in a stronger position than ever. The assets were real and tangible. The ordinary shares were still in the hands of the original holders or their families, which he thought was right in view of the risk.

A Voice: We would like to take a bit of the risk, sir. (Laughter.)

The Chairman explained that the increase in sundry creditors was due to the increased duty. The licensing properties held by the company now totalled in value nearly £1,100,000, partly by the conversion of leaseholds into freeholds. but chiefly by the acquisition of additional businesses.

Suggestions were made by debenture and preference shareholders that the company might consider the increase of the rates of interest, and the chairman, while declining to express an opinion, said no doubt the directors would consider the suggestions.

The proposed dividends were confirmed, and Mr J. A. Fairhurst was re-elected a director.

ABYSSINIAN CORPORATION, LIMITED.

COMMITTEE TO INVESTIGATE THE POSITION.

The first ordinary general meeting of the Abyssinian Corporation, Limited, was held, on the 2nd instant, at Winchester House, Old Broad street, London, the Viscount Wolmer, M.P. (chairman of the company), presiding.

The Chairman said: It is a matter of profound regret to your board that the results are so unsatisfactory. As you will see, after allowing for depreciation, a loss of nearly £150,000 has been made. The corporation was formed on December 4, 1918, with the assurance of Foreign Office approval, with the object of developing trade between Great Britain and Abyssinia.

When the company started operations last year, it was one of the principal objects of the board to establish the corporation on a firm working foundation. To this end, as has already been announced, the corporation took over last autumn the firm of Gerolimato and Armanza, who held a prominent position in the trade of Western Abyssinia. In pursuance of the same policy the firm of J. D. Nicholas and Company was shortly afterwards absorbed. In March, 1920, the board deemed it prudent to acquire the business premises and store of Messrs Jewaji and Company as the best foundation for import trade. The corporation also became agents of certain important British insurance offices and of other firms.

Referring to Mr Armanza's trading, the Chairman said:—On the initiative of Mr Armanza extensive coffee purchases were made, and he also undertook the development and combination of the two businesses of Gerolimato and Armanza and Nicholas. The ultimate result of his efforts, with reference to the coffee, will only be determined in next year's balance-sheet, but the recent heavy fall in the price of coffee has been so great that the board are of opinion that it is necessary to allow for a substantial loss on the transaction, and this we have accordingly done in the balance-sheet before you.

New developments which had been considered, and even initiated, have had to be abandoned, and at the cost of cutting the loss the board have had to retrench expenses all round.

The Chairman concluded by proposing the appointment of a committee to confer with the board and report to an adjourned meeting.

The Right Hon. Sir Frederick D. Lugard, G.C.M.G., C.B., D.S.O., seconded the resolution.

A discussion followed, in the course of which the chairman's resolution was amended, and ultimately it was unanimously resolved to appoint a committee of four, with power to add to their numbers, to investigate the position and report to an adjourned meeting.

STRAND HOTEL, LIMITED.

SATISFACTORY YEAR—INCREASED PROFITS.

The thirteenth ordinary general meeting of the Strand Hotel, Limited, was held, on the 2nd instant, at the Trocadero Restaurant, London, Mr Alfred Salmon presiding.

The Chairman, in moving the adoption of the report and accounts, said that the latter were in respect of the company's eleventh year of trading, which once more showed progress in the results achieved, the profits amounting to some £15,000 more than those of the previous year. This was particularly gratifying when it was considered that the expenditure under every heading had increased. The extra charges had been counterbalanced partly by the increase in the volume of business secured and partly by an adjustment of prices. They had found it necessary during the year to revise their charges for rooms. They were now 10s for a single room and 17s for a double room, which he thought the shareholders would agree, having regard to general conditions, were still very moderate. They included full table d'hôte breakfast, bath, all attendance, and "no tips." The demand for accommodation was still as keen as ever, and every available room in both hotels was practically always occupied, thus proving that the company's reputation for pre-eminence in value was maintained. The number of guests accommodated during the past year was a record. With regard to the Royal Palace Hotel, Kensington, good progress had been made in the matter of redecoration, re-equipment, and generally putting the hotel into an efficient state of repair. The standard of accommodation now afforded was not surpassed by any other hotel in London. From the business now being done at this hotel the directors were confirmed in their judgment in acquiring its control, and they looked forward to its future with confidence. With reference to the Baker street Hotel, the board regretted that the proposals referred to last year, which had principally to do with the raising by the Metropolitan Railway Company of the necessary capital for the construction of the building, had not fructified. The difficulty arose over the enormously increased cost of building since the proposal for the erection of this hotel was propounded. In view of this, an agreement had been entered into with the railway company cancelling the former agreements in respect of the scheme.

Mr John Balfour seconded the motion, which was carried unanimously, and a final dividend on the participating preferred ordinary shares, making 10 per cent. for the year, was declared.

ABACO (SELANGOR) RUBBER, LIMITED.

SATISFACTORY PROFITS—BOARD'S CAUTIOUS POLICY.

The seventh annual general meeting of the Abaco (Selangor) Rubber, Limited, was held, on the 1st instant, at the offices, 7 Martin's lane, London, Mr W. Arthur Addinsell (chairman of the company) presiding.

Mr H. A. Huntley, on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I move: "That the directors' report and statement of accounts for the year ended March 31, 1920, as presented to this meeting, be, and they are hereby, received and adopted." The report now before you contrasts very favourably with that submitted to you at the last annual meeting. For the previous year there was a net loss of £767, which has been converted during the year under review into a profit of just over £5,000, representing about 16 per cent. on the capital of the company. The output was the largest yet achieved by this estate, and the average net realised price of approximately 2s 2d per pound will compare very favourably with the operations of other estates covering the same period. I hoped that it would have been my pleasure to recommend to you the payment of a dividend of at least 10 per cent., but, as you will have seen from the report, the directors, after giving this question their earnest consideration, have unanimously decided that it would be contrary to the best interests of shareholders to make any distribution of the company's cash resources at the present time.

The outlook at the moment is not without signs that an improvement in the position may be nearer than many people imagine. In supporting the recommendations of the Rubber Growers' Association, I am convinced that this company has taken the right course, and will assist in hastening the recovery which we all look for in the price of rubber. I believe our financial position is strong enough to carry us over the difficult times through which we are now passing, provided that the company's affairs are carefully handled and every wise economy in

expenditure is exercised. With regard to the actual position of affairs on the estate, I think that the additional 100 acres referred to in the report will have been planted by this time, and that in all probability a further 125 acres will be ready for planting before the end of next March. I can only hope that when I meet you next year the outlook for the industry will be very much brighter than it is to-day, and I have every hope that this will be the case.

Mr Hawkins B. Varwell, J.P., seconded the motion, which was unanimously adopted.

The auditors were re-appointed, and the proceedings terminated.

TANDJONG RUBBER COMPANY, LIMITED.

The thirtieth ordinary general meeting of the Tandjong Rubber Company, Limited, was held, on the 30th ultimo, at 38 Eastcheap, London, Mr Charles Heath Clark presiding.

The Chairman said that during the past year £100,000 of reserves was capitalised and issued in fully-paid shares, increasing the paid-up capital to £250,000, and leaving reserve account at £18,684. During the year no additions were made to the planted area, which remained at 5,886 acres; 165 acres prepared for planting had to be planted, by Government order, with foodstuffs for the labour force. It was anticipated that this area would be planted with Hevea rubber before the end of the current year. The balance of extensions sanctioned would be taken in hand as circumstances allowed. The crop of rubber harvested during the year was 1,612,628 lbs, against the manager's estimate of 1,660,000 lbs. The crop came from an average bearing area of 4.912 acres, or about 82½ per cent. of the total area planted. The yield per acre per annum was 328 lbs, and per tree 3.76 lbs. The cost of production f.o.b., including staff commission, depreciation, &c., but excluding loss on exchange, was 1s 2.33d, as against 1s 1.95d in the previous year, the increase being due to heavier loss on rice and coolie engagement expenses. The average net price realised for the rubber crop, including a conservative valuation of the unsold portion, was 1s 10.78d per lb, as against 1s 8.79d for the previous year. The three estates had been kept in a thoroughly clean weeded condition, at an average cost of 7½d per acre per month, against 9d in the previous year. The current year's estimate was 1,800,000 lbs, subject to the restriction of output scheme, and up to October 31st they harvested 691,281 lbs. They had sold forward 190,400 lbs, at an average net price of 1s 10.22d per lb. The net profit shown was £40,886, with £3,186 brought forward and £3,206 of excess profits duty refunded. The directors proposed a dividend of 10 per cent., less income-tax, writing off £1,056 from the increase of capital and new issue expenses, and carrying forward £21,223, subject to excess profits duty and Netherlands Indies war profits tax, if any. The distribution of 10 per cent. on the present capital was equivalent to 15 per cent. on the capital existing before the recent issue of 100,000 bonus shares to the shareholders, and, except for the crisis through which the industry was passing, they might have felt justified in recommending a larger dividend. They had a splendid property, equal to any in Sumatra, and the cost of planting and bringing into bearing a similar acreage now would be between two and three times the cost at which the property stood in the books.

The motion was seconded by Mr J. R. Gray, and unanimously adopted.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3¾% to 3% on June 5, 1918, but was raised to 3¾% on July 31, 1919, to 3⅞% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920. *Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Other countries	105	United States	202,900
Total value of imports of gold	521,705	Total declared value of exports registered in the week	452,721

GOLD.

Messrs. Samuel Montague and Co. write, on December 2nd, as follows :—

The Bank of England gold reserve against its note issue is £123,167,535, an increase of £838,100 as compared with last week. Only a small amount of gold came into the market this week, and was taken for the U.S.A. New York reports the arrival of $1,200,000 in gold from London. We are informed by a correspondent from Bombay, under date of the 5th ultimo, that there was but little prospect of the bazaar buying gold in the London market until the stock in Bombay, which is estimated at 10 to 15 lakhs of tolas, became considerably reduced. The figures below relate to the net imports of gold coin and bullion into India :—

	June, 1920. Ounces.	Three Months Ending June, 1920. Ounces.
Bullion (bar, ingots, and other uncoined gold)	415,584	1,326,123
Coin (sovereigns and other British)*	1,131	52,460
Coin (foreign)	5,514	6,970
Total	419,967	1,385,553

* Net export.

The imports of gold into the U.S.A. from January 1st to October 31st were $315,518,745, as compared with exports amounting to $285,263,164, thus making a net import of $30,255,581.

SILVER.

The rise which began last week and carried the price to 49⅛d for cash and 49d for two months' delivery, was short lived. On Monday a considerable amount of silver came into the market from the Continent, America, and China. Selling from the last two mentioned quarters is worth noticing, especially that from China. We have pointed out that upon China has rested the responsibility of sustaining the chief burden of the market by the absorption of supplies. The price fell 5¼d in two days. A moderate reaction has ensued, owing to bear covering and shortage of supplies on the fall. The quotation for cash on the 30th ultimo—43⅞d—was ⅛d below the previous lowest quotation of the year—namely 44d, on June 15th. At that time the monsoon was not known to be a partial failure, a severe famine in several provinces of China was not apparent, the banking community had not curtailed drastically advances on merchandise, nor had the heavy fall in the value of commodities materialised. The repurchase of silver under the Pittman Act was then in prospect, though not commenced. We understand that the export of seeds and cereals from China is to be prohibited as from January 1st next. The net imports of silver into India during the month of June last amounted to 5,176,411 ounces. The total for the three months ending June, 1920, was 10,316,124 ounces.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

NOTICES.

The London Joint City and Midland Bank, Limited, have opened a branch at 8 King's road, Southsea, under the management of Mr George Martin. It is also announced that offices have been opened at Skelmanthorpe (sub to Huddersfield), Redruth (sub to Camborne), and Higham Ferrers (sub to Rushden).

The Australian Bank of Commerce, Limited, has opened a branch at Adelaide, South Australia.

Barclays Bank, Limited, announce that a branch will be opened at 32 Strand, W.C. 2, on Monday next, the 6th inst., under the management of Mr A. J. Phillips.

Messrs Cox and Co. (France), Limited, announce that, in addition to their Nice office, they have opened, on the French Riviera, branches at Cannes and Mentone, and arrangements are nearing completion for opening an office at Monte Carlo. Further, that, in addition to their Algiers branch, an office has been opened at Oran.

Under the scheme for the fusion of the London Bank of Australia, Limited, with the English, Scottish, and Australian Bank, Limited, the following changes have been made in the boards of the two banks:—Messrs R. J. Black, A. Cunningham, J. G. O'Neill and E. V. Reid have retired, and Messrs Andrew Williamson, John Paterson, J. Annan Bryce, and the Hon. Sir John A. Cockburn, have been elected directors of the former bank, and Messrs C. J. Hegan and J. Jackson have retired, and the Hon. Arthur Lawley and Messrs George Slade and Sidney M. Ward have been elected directors of the latter bank. Messrs Andrew Williamson and John Paterson have been appointed chairman and deputy-chairman respectively of both banks. Mr C. W. Wren and Mr E. M. Janion have been appointed respectively general manager in Australia and manager in London of the London Bank of Australia, Limited.

OIL OUTPUTS.

THE CALTEX OIL COMPANY.—Total sales for October amounted to 17,222 tons. This is the first monthly sales report of this company.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, November 24, 1920, amounted to 5,582 tons. Increase due chiefly to well No. 124, which has altogether produced nearly 8,000 tons in the last four weeks, but now appears to be seriously damaged.

UNITED OIL AND REFINERY COMPANY, LIMITED.—Throughput of refinery for October, 3,544 barrels.

ALEXANDERS DISCOUNT Co., LTD.,
24, LOMBARD STREET, E.C.3
Telephones: 1332 & 225 Avenue. Telegrams: "Alexanders, Thread-London.

(a) The balance of the 37½ % for the year under the new scheme will be paid as soon as the profits of the half-year are known.

(b) An extra dividend of 100 per cent. has also been declared, payable in stock on same date.

TUBE INVESTMENTS.—Dividends have been paid at the rate of 7 per cent., less tax, on the amount for the time being paid up on the preference shares to July 31st last, and an interim dividend of 1s per share, free of tax, on the amount for the time being paid up on the ordinary shares. It is now proposed to pay a dividend for the three months ended October 31st on the preference shares at the rate of 7 per cent. per annum, less tax, on the amount for the time being paid up; the fully-paid ordinary shares allotted in exchange for shares of the merging companies are to receive a dividend for six months ended July 31st at 2s per share, and for three months ended October 31st 9d per cent.; the fully-paid ordinary shares issued for cash a dividend for six months ended July 31st 1s per share, and for three months to October 31st 9d per share; the partly-paid ordinary shares for six months to July 31st 3d per share, and for three months to October 31st at 1½d per share, the dividends in each case on the ordinary shares being free of tax.

THE EAST INDIAN RAILWAY COMPANY recommends dividend from surplus profits of 15s 3d per cent. on deferred annuity capital and deferred annuity capital, Class "D," in addition to guaranteed interest of £2 per cent., for half-year ending Jan. 31, 1921, and 4s 9d per cent. compensation paid by Secretary of State on account of tax.

BROKEN HILL PROPRIETARY.—Cabled report for four weeks ended November 10th —"Shortage of shipping and consequent reduced ore supplies prejudicially affected production. Coke produced 21,615 tons; No. 1 blast furnace produced 13,558 tons; No. 2 blast furnace produced 11,631 tons; foundry furnace 500 tons; opened hearth produced 19,404 tons; blooming mill produced 16,486 tons; rail mill produced 7,883 tons; 18-in mill produced 6,106 tons; 12-in mill produced 2,140 tons; 8-in mill produced 1,017 tons; rod mill produced 4,680 tons. Broken Hill—Strike declared off November 10th."

MOUNT LYELL MINING AND RAILWAY.—Cable:—"From Oct. 21st to Nov. 17th, inclusive, a total quantity of 15,722 tons of ore has been treated, being 9.961 tons from the Mount Lyell Mine and 5,166 tons from the North Mount Lyell Mine, also 595 tons concentrates. The converters have produced during the same period 473 tons of blister copper, containing 469 tons copper, 14,476 ozs silver, and 463 ozs gold. Furnace in blast 889 hours."

$37,500,000

Reports and Notices.

We regret to announce the death of Mr David Cowen, senior partner in the firm of Bell, Cowan, and Co. The firm will be carried on under the same name by the surviving partners,

York street, Westminster, London, S.W. 1, having been re-named "Petty France," the Bombay, Baroda, and Central India Railway Company's address is now 91 Petty France, Westminster, London, S.W. 1.

The trading offices of the British West African Trading Company, Limited, formerly Tin Areas of Nigeria, Limited, have been transferred to Imperial House, Kingsway, W.C. 2.

The registered office of Thomas Tilling, Limited, is now 20 Victoria street, Westminster, S.W. 1.

The London and Lancashire Insurance Company, Limited, announce that they have opened a special department to deal with home foreign business at 79 Cornhill, E.C. 3. (Telephone Number, Central 12565.)

GOVERNMENT STOCKS, &c.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1st to October 30th (new style, January 1st to October 13), 1920:—

		Monopolies, Tobacco, Stamps, Stamped Paper, Naxos Emery.	Piræus Customs.
		Drachmæ.	Drachmæ.
Gross receipts, September, 1920 ..		6,033,644.60	4,716,000.15
Do do 1919 ..		4,369,746.25	4,178,889.15
Estimated receipts for nine months (Law of Control)		21,675,000.00	8,025,000.00
Actual receipts for nine months, 1920		48,802,856.87	43,153,049.05
Actual receipts for nine months, 1919		35,408,794.00	35,009,394.35
Difference between estimated and actual receipts for nine months	1920	+ 27,127,856.87	+ 35,128,049.05
	1919	+ 13,733,794.00	+ 26,984,394.35

NOTE.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and naxos emery, 49⅓ per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893. The receipts in gold from both naxos emery and the Piræus Customs are converted into drachmæ at par when the average rate of exchange for the month is par or below par, but when the average rate for the month is above par, the conversion is made at that average rate.

VENEZUELA (3 PER CENT. DIPLOMATIC DEBT).—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4½d, being the moiety of the eighth fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1920.

BANKS.

BANK OF MONTREAL.—A cable from Montreal states that the annual statement for the fiscal year ending October 30th shows that the total of current loans is $223,495,472, against $164,182,581 last year, a gain of close on $60,000,000. The total loan accounts amount to $256,500,000, compared with $195,727,857 a year ago. On the other hand, there has been a steady reduction in special Government business undertaken during the war, and holdings of Dominion and Provincial Government securities are now reduced to $14,863,954 from $63,984,255. During the year the bank made a further issue of stock, and both capital and reserve have been increased to $22,000,000 each, compared with $20,000,000 each at end of previous year. The total assets of the bank now amount to $560,150,182, compared with $545,304,809. Profit and loss statement shows the largest profits made in the history of the bank, the net earnings for the year having amounted to $4,033,995, compared with $3,314,227 for the previous year. The bank distributed $2,960,000 in regular dividends and bonus of 2 per cent., $2,000,000 were placed to credit of rest account, leaving the amount carried forward at $1,251,850.

ROYAL BANK OF SCOTLAND.—The net profits for the year ended October 9, 1920, after providing for bad and doubtful debts and for depreciation in investments, were £375,139; midsummer dividend, at rate of 10 per cent. per annum, required £100,000; similar dividend and a bonus of 1 per cent. is proposed. There has been written off expenditure on bank buildings and heritable property £20,000, carried to pension reserve £30,000, applied to investment account the balance of £171,138. The rest remains at £1,082,276.

SOCIETE GENERALE ALSACIENNE DE BANQUE.—The Société Générale Alsacienne de Banque continues to make good progress. Its capital, which on June 30, 1919, amounted to 25 million francs, was increased to 50 million francs in October, 1919, and again to 100 million francs in May this year. The Cologne agency of this bank reports to us that the company has greatly helped to the extension of allied trade in occupied territories of Germany, where its new branches have been opened. A branch was opened at Saarbrücken in March, 1919, and at Cologne in June of the same year.

RAILWAYS.

THE ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY, LIMITED, announces that it has now obtained the approval of the Chilian Government to increase by 12 per cent. the tariffs on the company's lines in Chili, including those of its subsidiary, the Compania Ferrocarril de Aguas Blancas (Aguas Blancas Railway). The increase will not apply to passenger fares, which normally represent, more or less, 10 per cent. of the gross receipts, and will come into force on January 22nd.

MISCELLANEOUS.

ABYSSINIAN CORPORATION.—The accounts for period to June 30, 1920, show a loss (after charging depreciation, loss on exchange, and provision for anticipated loss on stocks) of £149,916. The principal factors which have operated adversely are the fluctuations in exchange and the abnormal conditions existing in the world's markets, especially in regard to hides, coffee, and cotton goods, commodities chiefly dealt in by the corporation. Ordinary shares became fully paid on April 8, 1920. Of 150,000 ordinary shares reserved for subscription in Abyssinia 58,725 have been applied for and allotted.

BLEACHERS' ASSOCIATION, LIMITED.—The results of the trading of the association for the half-year ending September 30, 1920, are as follows:—

		£
After deducting central charges and an estimated amount in respect of income-tax, excess profits duty, and corporation profits tax and—		
Maintenance and upkeep	£254,319	
Amount written off leaseholds and sundry properties	7,500	
Debenture interest	50,625	
Interest account	41,971	
The profits of the association amount to		576,404
Out of this balance the directors have transferred to depreciation fund	90,000	
Transferred to contingencies fund	25,000	
Paid interim dividend on the preference shares at the rate of 5½ per cent. for the three months ending June 30, 1920	33,997	
		148,997
Leaving a balance of		427,407
From this must be deducted a further dividend on the preference shares for the three months to September 30, 1920 (which is payable in February next), amounting to		33,997
Leaving		393,410
And this, with the amount carried forward at March 31st, last		321,462
Leaves a total balance of		714,872

Out of this balance the directors have decided to pay an interim dividend on the ordinary shares for the half-year ending September 30, 1920, at the rate of 8 per cent. per annum, amounting to £94,843, leaving £620,029 to be carried forward.

COMMERCIAL CABLE.—Baring Brothers and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 21st to the 31st instant, both days inclusive, for the preparation of the warrants for interest due January 1, 1921.

HARRODS (BUENOS AIRES), LIMITED.—For the 12 months ended August 31, 1920, the trading again showed a substantial increase upon that of the previous year, and after provision for depreciation, payment of salaries, advertising, and all other working expenses, and including dividends receivable, has resulted in a net profit of £577,675, to which must be added the balance from last year's account, £14,140, totalling £591,816; out of which the directors have allocated to writing off the balance of formation and other inauguration expenses, £35,000; to payment of dividend of 6½ per cent. on 600,000 preference shares, £39,000; to reserve, 10 per cent., in accordance with the articles of association, £51,781; to payment of dividend of 10 per cent. on 3,925,486 ordinary shares, £392,548; leaving a balance of £73,486, for distribution amongst the holders of deferred shares, upon which the directors recommend the payment of a dividend of 5s per share, £60,000; carrying forward the balance of £13,486 to the credit of deferred shares. The report states:—"In February proposals were made by your directors for the acquisition of shares in The South American Stores (Gath and Chaves), Limited, subject to the offer being accepted in respect to at least 80 per cent. of the total number of each class of shares. This offer has been accepted by the holders of over 94 per cent. of the total number of shares. In accordance with the agreement, Baron F. A. d'Erlanger, Mr G. L. Bevan (both directors of the South American Stores (Gath and Chaves), Limited), and Mr P. Della Valle, president of the local board, joined this board."

LAGUNAS SYNDICATE.—The gross profit for the year ended June 30, 1920, was £46,260, less London expenses, income-tax, and provision for corporation profits tax £16,348, debenture interest £13,328, leaving £16,583, which has been transferred to the sinking fund, in accordance with the resolution of the debenture-holders of December 14, 1914. Oficina North Lagunas was reopened in June last and South Lagunas in September. The working results at both places are stated to have been satisfactory.

LIVERPOOL WAREHOUSING COMPANY, LIMITED.—The report for the year ended September 30, 1920, shows a trading profit of £145,836, which is raised by the sum brought forward to £146,319. Interest on debentures claims £11,049, and £64,129 is transferred to general reserve fund; while depreciation allowances amount to £28,000. Interim dividends on the preference and ordinary shares have been paid, absorbing £17,631, and £25,510 is left to be disposed of. The directors recommend the payment of the final dividend on the preference shares, £6,256, and a final dividend of 1s per share on the ordinary shares (making 10 per cent. for the year), which will take £17,062, and leaves £2,192 to be carried forward.

SHOWELL'S BREWERY.—The report for the year ended October 2, 1920, shows a profit, after providing for taxation and other contingencies, of £60,959. Deducting debenture interest and adding £17,238 brought forward, there remains available the sum of £58,852. The directors propose a dividend of 25 per cent. on the ordinary shares, less tax, place to reserve £10,000, and carry forward £15,052.

* Half-year. † Free of tax. (a) Wilkes, Limited, includes £15,814 fully-paid ord. shares allotted as a bonus. (d) Capital has been increased during the year. For 1918-19 ordinary dividend was 40 per cent., and for 1919-20 it was 17½ per cent. on the larger capital. (p) Wolverhampton and Dudley Breweries.—Capital increased during year. 10 per cent. dividend took £30,000, whereas last year 16 per cent. only took £24,000. (m) Showell's Brewery.—Capital reorganised during year. 276 per cent. paid last year only took £13,800. (t) Also bonus of about £205,000 in deferred stock at par.

SOUTH AMERICAN STORES (GATH AND CHAVES).—The report for the year ended July 31, 1920, shows gross profits of £632,264, and net profits, after deducting debenture interest, land charges, &c., of £446,981. After writing off the issue expenses of the 1919 debentures, £68,244, the directors have decided to place £50,000 to a reserve for equalisation of dividends, leaving £328,736. Of this the preference shares take £24,000 as fixed dividend and £32,211 as share in profits, the ordinary shares £90,000 in fixed dividend and £139,579 as share in profits, and the deferred shares £42,927 out of surplus profits. In February last an offer was made by Harrods (Buenos Aires), Limited, to purchase the shares in the company, and the offer was accepted by over 94 per cent. of the shares.

WALL PAPER MANUFACTURERS, LIMITED.—The report for the year ending August 31, 1920, shows a profit for the year, after making reserves for E.P.D. and corporation profits tax, of £751,888, to which has to be added £19,380 brought forward. Debenture interest absorbs £41,138, income-tax £57,774, and the preference dividend £57,618. An interim dividend of 4 per cent. on the ordinary shares took £51,283, and a final dividend of 6 per cent. will take £76 924. A dividend of 10 per cent. and a bonus of 2½ per cent. is recommended on the deferred shares, and this will absorb £240,376, while £65,000 is to be transferred to the "Contingencies Fund," leaving £181,054 to be carried forward. The report states that:—"The company's claim in respect of the German factory has now been registered with the Clearing Office for Enemy Debts, and it is anticipated that a considerable portion of the amount invested in Germany will be recovered."

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions have remained favourable for agricultural operations, the mild conditions of the late autumn enabling the later-sown seed to germinate well, while plants above ground are strong and healthy. A full average area is laid under wheat, and in some parts last season's acreage may probably be exceeded. Root crops receive good mention, while keep remains plentiful. Offerings of native wheat at the statute markets were on a liberal scale, with a very slow demand in force, and prices generally moved in a downward direction. Here only finest quality maintained maximum figures of 95s, while lower grades ranged down to 80s per 504 lbs. Foreign descriptions also in slow request, and official quotations were reduced by 5s per quarter of 480 lbs, following recent heavy declines in North America. Millers, however, are well supplied for the present, and are not likely to purchase with any degree of freedom in anticipation of a further downward movement. Prospects of forward supplies hold good, and harvesting operations have started in Argentina, and will shortly commence in Australia. The promise of liberal quantities from the Southern Hemisphere, together with an absence of "commission" purchases in America, has resulted in a general lowering of the world's prices, although increased buying on the part of Continental importers of late has had a steadying influence. However, as soon as the Argentine and Australian crops come into circulation, with Indian arrivals expected shortly, a further cheapening of values should be effected. Flour remains slow of sale and freely offered, the decline in wheat resulting in a general reduction of 4s per sack of 280 lbs. Bakers, however, only purchase for immediate requirements in anticipation of further concessions taking place shortly. G.R. grade now stands at 82s per sack, ex mill, and imported ranges from 77s 9d to 89s per 280 lbs, ex store. Barley dull, and native descriptions easy. English malting ranges from 65s to 110s; grinding ditto, 60s to 65s; Californian, ex ship, 85s to 95s; Australian, 90s to 98s; ex ship, Morocco, landed, 75s to 81s, per 448 lbs. No. 4 Canada Western, ex ship, 55s to 58s; American malting, ex quay, 64s 6d per 400 lbs. Maize dearer, in sympathy with forward strength. Plate, ex ship, quoted 55s 6d; landed, 58s; Gal-Foxanian, 56s 6d; South African, 59s 6d, landed, per 480 lbs. On c.i.f. terms prices advanced sharply on reserved sellers and a good general demand. A cargo of mixed American, January steamer, sold at 49s, and Plate, November 27th, B/L, at 51s 6d, steamers of the latter, December shipment, being now worth 55s. Parcels very irregular, but dearer on balance, with sales of La Plata qualities, December-January, up to 52s 6d, since 51s 3d, and January-February 53s, later at 51s 9d, per 480 lbs. Oats ruled firmer for imported descriptions, but spot trade quiet. English ranges from 48s to 54s per 336 lbs. Of imported, Plate clipped advanced to 45s, American white 45s 6d, No. 2 Canada Western 49s, landed, per 320 lbs. In the forward market fair sales occurred at firmer prices. A steamer cargo of Plate clipped, expected loading, changed hands at 38s 6d; parcels of ditto, January-February, selling at 37s, and f.a.q. 36s, per 320 lbs. Beans steadier. English springs, 85s to 97s 6d; new winter, 70s to 75s, per 532 lbs. Peas dull. English maples 85s to 100s, Dunns 75s to 80s, per 504 lbs. Japanese marrowfats, old, 26s, new, 29s cwt. Lentils steady at 42s to 45s 6d, per 100 lbs. Oatmeal dull, and English made reduced by 20s to 40s per ton, but other descriptions unaltered. Homeward grain chartering was on a fair scale, and rates, generally, in a downward direction. Australia took steam tonnage for new season's wheat at 100s, and sailing vessels at 80s to U.K., with options, while Karachi established 45s. From the River Plate rates were firmer, 44s up to 55s being paid for early loading to U.K./Continent, and 65s new season's grain loading at up-river ports.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes: Business in five-sixths of the branches of local industry continues to quieten, but although most authorities foreshadow worse times ahead, some of them appear confident of a revival in the New Year. The placing of new business has practically ceased. This is not surprising at the time of a downward movement of prices, as people naturally avoid holding stocks until there is reason to suppose that bottom levels have been reached. The state of the exchanges puts out of court any considerable amount of business with European markets whose currency is heavily depressed, as the cost of most British commodities is prohibitive. There has lately been a limited revival in armament work. Railway companies are ordering as sparingly as possible in consequence of the inflated prices of rolling-stock steel, which have not yet been reduced. The fall in prices up to the present time has not affected any of the higher qualities of steel. There is no considerable foreign competition in acid, open-hearth, or the various crucible steels. Buyers are pressing for concessions, and some cutting is reported by individual makers. The trade, as a whole, however, holds that as costs are no less, they are not in a position to reduce prices at present. A local innovation of some interest is the installation of a crucible steel melting furnace burning oil instead of coke. The advantages claimed for the method are—low cost of installation, economy of space and labour, uniformity of temperature, and cleanliness. Owing to increased production, reduced consumption, and the partial stoppage of the export trade, fuel is becoming abundant. Freedom to export will soon have to be restored to prevent the market being glutted. House coal is rather more active than it has been. Prices per ton at pits are as follows:—Best South Yorkshire hard, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d. to 33s 2d; steam cobbles and nuts, 31s 8d to 32s 2d; best hard slacks, 28s 5d to 28s 11d; small slacks, 23s 2d to 24s 2d; best Tyne steam, 36s 6d; branch, 37s 2d to 37s 8d; Silkstone, 33s 8d to 34s 8d.

Our Glasgow correspondent (writing on Thursday) says:—The feature in the iron and steel trades positions this week is that while nearly everybody one meets talks pessimistically of the current situation and of business prospects, everybody, at the same time, is eagerly on the hunt for supplies of raw and finished material, the former particularly. It appears to be undoubted that consumers of Scotch pigs and of hematites are quite unable to cover their wants, that for the reason that outputs are much below the normal. Scotch ironmasters report that there are only some 46 blast furnaces blowing, about one-half of the number working prior to the late coal strike. In the last few days there has been quite a rush of orders for all sorts turned out, in the interest of Scotch and English buyers, and some 50 per cent. of these have been turned down. Books, it is added, are filled up to the end of the year—in fact, in many cases on to the end of January, and until more furnaces are blown in—and that can only be after repairs now in course are completed—there can be no improvement in the conditions. Some authorities look for relief from increased imports of Continental makes, but the quantities coming forward are inadequate to the necessities of the occasion, and, besides, are not of the desired quality. Such lots as are being landed in the Forth from Belgium just now (about 500 tons this week) are taking the place of Cleveland—yet that inadequately. Conditions in most of the finishing branches—in relation to steel production, shipbuilding, engineering, &c.—are much as they have been for some time back. Latest accounts show that shipbuilding in Scotland generally remains active, and that a very big quantity of shipping, on old contract mostly, has yet to be launched, the bulk of it in 1921. Last month there were 25 vessels of 48,647 tons put in to the water on the Clyde, a good monthly average, bringing the total for the eleven months up to 204 vessels of 565,088 tons, comparing with 255 vessels of 507,363 tons in 1919. Supplies of coal continue on the increase, to the extent, indeed, that inland consumers find themselves over-supplied, and are declining to add further to reserves. This state, it is expected, will lead to an expansion of exports.

Our Middlesbro' correspondent's report, dated December 2nd, is as follows:—Pig-iron: Although makers of pig-iron have plenty of orders for their immediate output of foundry iron, forward business is being held up. Belgian offers of iron and steel are responsible for what would appear to be an impending "slump" in home and export prices, and, with the present abnormal price of the franc, the Belgians can, and will, undersell us both here and abroad. The more export orders the Belgian works get, the sooner will their exchange with us return toward normal and the fall in prices on this side be arrested. No. 3 and No. 4 foundry pig-iron unchanged at 225s. per ton, and East

VICTORY BONDS
purchased now will not be available for the payment of Death Duties for their full face value until six months have elapsed. The
VICTORY BOND POLICIES
issued by the
NATIONAL PROVIDENT INSTITUTION
provide for the payment of the full amount of the face value of the bond from the date of issue.
Particulars post free on application to—
48 GRACECHURCH STREET, LONDON, E.C.3.
Telephone: 1773 Avenue.

Coast mixed numbers hematite still remains at 26os per ton for home consumption. Manufactured iron and steel: Buyers of iron and steel are holding back for reduction, but so far makers have not made any alteration. Consequently business is very slow. Steel ship plates, £24 10s (home); steel ship angles, £24; iron ship angles, £30 15s; iron bars, £30; steel rails, £25 net. Iron ore: There is no pressure to sell for forward, and prices remain firm. Freights from Bilbao are tending easier—18s 6d now, as against 20s recently.

MANCHESTER, December 2.

The business done in the market during the week has been quite unimportant, and the general demand has been at a very low ebb. Towards the close rather more interest has been taken in prices, chiefly as a result of the rally in cotton rates. India merchants are harassed by poor remittances from the other side, and it is said that native dealers are holding money back until there is an improvement in exchange. The position of affairs is being considered by the Chamber of Commerce. A fair amount of cloth inquiry has come through for Calcutta, with miscellaneous sales, chiefly in light fabrics. Disappointing reports have again come to hand from China, and dealers abroad who bought goods freely several months and did not fix exchange, are awkwardly situated. Exporters to the minor outlets East and West have adopted a waiting policy. Very little has been done in home trade cloths. There has been an improvement in yarn inquiry, but spinners, when they have sold, have had to accept wretched prices, and production at the moment is far in excess of the requirements of users.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Depressing conditions are still adversely affecting the wool textile industry, and the general opinion appears to be that trade has never been worse than it is at present. Not only have prices slumped, but all sections of the trade appear to have lost confidence in values, and so one finds that quotations go lower and lower, without any appearance of the bottom being reached. It is generally assumed that the root cause of the trouble is the absence of foreign demand owing to the adverse exchange rates. Certain it is that there is not enough business in the home market to keep machinery occupied, and throughout the West Riding the majority of the mills are only working 24 hours per week. Very little business was transacted on 'Change to-day, and quotations can only be considered nominal. Average 64's tops are quoted at about 4s 3d per lb, and 2-48's yarn out of this quality can be bought at about 7s 6d, though forced sales have been made at lower figures. There is practically no new business in the piece trade, and values continue to fall.

LONDON COLONIAL WOOL SALES, 1921.

The Committee of London Wool Brokers is authorised to announce that, by arrangement with the Department of the Director-General of Raw Materials and the Sub-Committee of the Colonial Wool Merchants' Association, the first two series of auctions for 1921 have been fixed as follows:—"T" series, January 11th to January 20th, 15 days; "U" series, February 22nd to March 5th, 10 days. The days allocated for the offering of privately-owned wools will be announced later.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Nothing can be said about the position in the wool trade to indicate an improvement in any direction. Since last writing sales have been held at Brisbane and Adelaide, cables from both centres reporting a further distinct setback in values, amounting in Adelaide to 15 to 20 per cent. The average prices cabled by Messrs Elder Smith and Co., Limited, show clearly that prices are moving to a much lower level, while Messrs Dalgety and Co., Limited, state that wool giving a clean yield of 52 to 54 per cent. sold around 27½d. Cable information received a week ago from Sydney stated that good 64's-70's merinos were available on a clean basis of 40d delivered Bradford, and if really good, fine-haired Sydney merinos are available at that price, wool must have been cheap, for Bradford topmakers had a fair innings. No more than half the offerings are being sold in the Colonies, and in wool circles in London it is fully expected that a considerable quantity of raw material will be sent forward on growers' account in the hope of better prices being realised. It has been pointed out that the very best superfine merinos were sold at the last London sales on a clean basis of 90d, and if the best Sydney wool could be purchased at 40d delivered Bradford, it shows that Australian wool values are very much lower than in either London or Liverpool. It is evident that buyers are going to have some cheap wool, and prices can fall to a still lower level during the next three months. Some think it is high time values began to steady, but at the moment there is nothing to indicate that the bottom has been touched. There would soon be a change in the attitude of the entire trade if the big stocks of piece-goods could be shifted, but as this is not being done, new piece orders, even at the prices manufacturers are prepared to accept, are conspicuous by their absence. The Government are still being urged to lower their limits, but the course they have taken has certainly had the effect of obviating adverse criticism from the Australian Government and growers. Very little more wool would have been purchased if limits had been lowered 25 per cent., for no amount of crossbreds have been sold except South American descriptions, and the sales of merinos grown in that country have also been small. The British Government can now afford to lower their limits, for the pitch has already been queered for merinos in Australia and crossbreds in New Zealand.

One cannot but feel regret at the course of crossbreds, New Zealand pastoralists having received a nasty knock. They certainly deserve better treatment, but there is no trade for this description, notwithstanding the extremely low prices current for

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Though the market, generally speaking, has in more than one section rallied, and there is a steadier tone, a good deal of nervousness is still apparent, and correspondingly little disposition to trade. The improvement has been most marked in linseed and linseed oil. Since business was done last week in Plate spot and afloat at £21, there has been an advance of 30s to 40s per ton, while the oil product, after touching bottom at £41, has improved £4 to £5 per ton, though consumers in both departments appear to have filled their requirements for the time being. Linseed has come to hand in large quantities in the past few days, and considerable quantities are afloat—viz., 63,000 tons destined for the U.K. and 54,000 tons for the Continent, in all, 117,000 tons, against only 49,300 tons in the corresponding week of last year. With regard to the fall in linseed oil, the level is the lowest since 1916.

Cottonseed has continued to be subject to weakness, and values have further declined without bringing out buyers to any extent. Crude Egyptian oil has sagged about £3 per ton on the week, but other grades have not been so seriously affected. Rapeseed oil and soya oil are offered at less money, but only a small trade has been done in any of the oils, industrial or edible.

The slackness in the demand for oilcakes is unprecedented for the time of year, and quotations of linseed, cotton, and other varieties have been substantially reduced in order to better compete with cheaper cereal foodstuffs in the market.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The Bermondsey hide market was again weaker on Thursday, best ox and heifer dropping to 8¼d—8½d, showing falls of ¾d—⅞d, as against last week. Cows also fell to 7¾d in best selections. Horse fell 2s each, best making 35s. Calf were steady, but wools were again weaker, and declined 3d—10d each.

Business in foreign hides has been slow, although the reported purchase by the U.S.A. of frigorifics has somewhat stiffened this market. Cables from all parts of the world this week report a fall in hides and skins, and tanners naturally do not think bottom has been reached. The sensation of the week has been the decision of A. and W. Nesbitt, Limited, hide and skin brokers, of Garlick Hill, to go into voluntary liquidation. A meeting of creditors is to be held next Wednesday, and it is reported the liabilities will run into nearly a million. Other firms in the hide trade are involved, and further financial trouble is expected.

The leather trade remains stagnant, and there is a very small volume of business passing in sole leather. A few parcels of 12 to 14 lb bends are wanted, but other weights seem altogether neglected. Offal is a dead letter, and tanners are cutting their losses and selling at the best figures they can obtain. Upper leather is also dull, and only very low-grade calf, sides, or semi-chrome kips are wanted. The demand is for a cheaper boot, and I regret to say there is an appalling amount of rubbish already on the market, and appearing in some retailer's windows as "Special Bargains."

Saddlers and harness makers are dull in Walsall, and many men are out of work. The makers of high-grade fancy goods have enough orders to last until Christmas, but beyond that the outlook is bad.

The shoe trade is still dull, and many factories are only working half time. Inquiries from the Continent are plentiful, but few mature into business owing to exchange and financial difficulties.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 3.

The markets during the week remained in a generally dull state, and in several directions prices were weaker inclined, particularly where holders manifested a disposition to force their sales.

SUGAR.—There was a fair demand for free parcels at the lower prices fixed, and crystallised West India sold 67s to 72s, muscovado, 40s to 50s; and syrups, 38s to 48s. Peruvian, basis 96 per cent., December-January, sold, 27s 9d, f.o.b. terms. American syrup sells very quietly, good middling at 26s to 27s, and good to fine grocery, 30s to 34s; dark, 20s to 21s. Liquid glucose, 45s.

COFFEE.—A quiet tone again governed this market, demand for export kinds showing no improvement, while the home-trade is confined to a narrow limit. Mysore, good bold, sold up to 125s 6d. A dull state of affairs prevailed for future delivery, prices being lower on the week.

COCOA remained in a very idle state, with quotations largely nominal. Fine Grenada, sold, 59s to 60s.

TEA.—With no recovery in demand for medium and common descriptions, a depressed market again resulted, while a good many parcels had to be withdrawn. Really fine teas, however, met with fair support, at about recent rates. During the week 39,400 packages Indian and 22,200 packages Ceylon were auctioned.

RICE.—Market very slow, and general situation nominal. Rangoon bran quiet, at recent decline. Beans dull. Rangoon spot, sellers, 13s.

SPICE.—Pepper ruled dull, and rates easy. Fair black Singapore, spot, sold, 4½d; ditto, January-March, 4⅞d to 4¾d; Aleppy, spot, 4½d; Tellicherry, 4½d; white Singapore, 10d; Muntok, 1s 0½d to 10d; ditto, January-March, 9½d to 9d. Zanzibar cloves, spot, 1s 4d to 1s 5d; January-March, steamer, 10d; pimento, 3¾d; flake tapioca, spot, sold, 2d to 1⅞d; fair Penang seed, spot, 22s 6d; small sago, 30s; sago flour, spot, 23s; January-March, sold, 18s 9d; Japanese farina, spot, 27s; January-March, 24s; desiccated coconut: fine cut, spot, 70s; medium, 75s.

FRUIT.—Currants steady, with a moderate inquiry. Pyrgos, sold, 77s; Amalia, 82s to 84s; Patras, 85s to 87s; Vostizza, 96s to 105s. Sultanas steady, quiet. Smyrna, new, 138s to 160s; Australian, 143s. In auction 60 tons Valencia raisins were offered, and half disposed of at full rates for the finer qualities, but common proved dull of sale. Quarters, sold, from 125s to 162s; seedless, 127s. Figs quiet. Layers, 148s to 154s; pulled, 190s to 210s. Muscatels slightly easier in auction. Good boxes, sold, 177s 6d to 212s 6d; loose, 100s to 170s. Valencia almonds, sold, 250s to 265s.

JUTE.—The market remained in a very dull state, and prices on the week show a further decline, without, however, stimulating demand. Native first marks assortment, new crop, December-January actuals, £43, sellers; subs, £35; lightning actuals, £29; and subs, £27. Hessians very dull. 10 oz, spot, 33s; 8-oz, 30s. A twills, spot, sold, 88s to 87s; and B, 83s to 80s.

HEMP.—Manila very dull, and prices easier on the week. J grade, October-December, £58 10s; K ditto, £49; L, £48; M sold, £38. New Zealand flat. Points, October-December, sellers, £51 10s; and fair quality, £50.

SHELLAC.—Market remains dull, and forward irregular. T.N., March, sold, 385s to 370s.

COPRA dull and easier this week. F.M.S. Straits, December-February, London, sold, £47 to £46 10s, £48 and £47 10s; ditto to Rotterdam, £47 10s. Ceylon nominal. Palm kernels quiet, and December-February sold, £30 to £31 and £30 15s.

MENTHOL.—Spot sold, 27s 6d; December-February, 6s 7½d; peppermint oil, spot, 5s 9d; December-February, 4s 6d; aniseed, spot, 3s 6d, sellers; slab camphor, 5s; crude ditto, 2s 8d per lb. Japan wax, spot, quoted, 117s 6d per cwt.

EGG PRODUCTS.—Market quiet all round. Liquid yolk, December-February, sold, 85s. Albumen, spot, sellers, 4s 5d.

RUBBER.—Market quiet and easier on the week. Crepe, spot, sold, 1s 2d to 1s 1½d; January-March, 1s 2⅝d to 1s 2⅛d; April-June, 1s 4d to 1s 3½d; sheet, spot, sold, 1s 0⅜d to 1s 0¼d; January-March, 1s 1⅜d; April-June, 1s 2½d, 1s 2⅝d. Fine hard Para, spot, 1s 2d; and soft fine, 1s 1½d.

OILS.—Linseed firmer. Spot, net, naked, 50s; January-April, 50s. Rape quiet. Crude, spot, 72s; refined barrels, 82s. Cotton

(*Continued from page* 1019.)

while since registered at £213. Irregularity and an improved tone prevailed until the middle of the week, cash advancing to £209, three months to £214. At Thursday's market, active buying led to a further upward tendency, cash being sold to £213, and three months from £220 to £216, rallying to £219 10s, and finally done at £219. A further advance was established on Friday, the market being active. Cash sold at £216 5s to £220 10s; early January, £221 to £222; and three months up to £225. English ingots, £217 to £218. Copper declined early in the week, offers being on a fairly liberal scale, standard by Tuesday realising £74 15s cash, early December £75, and three months down to £75 5s, subsequently £75 15s. A firmer tone characterised Wednesday's market, with chief dealings in three months at £76 to £77. At Thursday's session values again advanced on better support, cash selling at £77 5s to £78 10s, and three months at £77 15s to £78 10s. At Friday's meeting values again hardened, a good business being done. Cash moved up to £79 15s, while two months changed hands at £79 5s, three months £79 5s to £79 10s. Electros, £88 10s to £89 10s; best selected, £86 10s to £87 10s; strong sheets, £139. Lead lower at £27 5s to £28. Spelter irregular at £31 10s to £33 5s. Antimony: Regulus, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars quoted at £86 10s to £87 10s.

INDISPENSABLE TO BUSINESS MEN.

The Daily Telegraph.

VICTORY ATLAS

OF THE WORLD

THE VICTORY ATLAS is essential in the office. The merchant and manufacturer must know where the new States lie, and how they can be reached by sea and land. He must familiarise himself with the new countries where new Governments and new tariffs have been set up, and new coinages and weights and measures introduced, or he will be left behind in the struggle for their markets. These new countries are shown on larger scales and in greater detail than in any other atlas in existence, and in the Victory Atlas the business man can pick out the routes and distances by sea to their ports, or he can trace out the land routes to States without a seaboard. The economic inset maps will show him where raw materials such as iron, lead, rubber, wool, silk, &c., are obtainable, and the charts of the oceans, with their steamship routes and distances, will enable him to estimate the cost and time required to bring these products into the home market.

The Victory Atlas is published in three styles of binding: Cloth, with handsome gilt lettering, £7 5s.: half-morocco, with handsome gilt design and lettering, £8 15s.: full morocco, with handsome gilt design and lettering, £10 10s.

The form of binding used for the Victory Atlas is the "guard" system, which ensures every map lying absolutely flat when the Atlas is opened, and no name or detail of any kind can be obliterated from the centre. This fact alone should commend itself to many purchasers.

For the convenience of those who prefer to have the maps bound in such a way that they can be taken out and consulted separately, the Atlas is also published in a loose-leaf binding case.

As none of the maps contained in *The Daily Telegraph* Victory Atlas can be purchased at less than 2s. a copy, and considering that there are 150 full-plate maps in the Atlas, and that the cheapest form of binding costs 39s., the advantage of purchasing the complete volume is obvious.

Notice is hereby given that the TRANSFER BOOKS of the Company, so far as regards the four per cent. Guaranteed Stock, will be CLOSED from Friday, the 3rd December, to Friday, the 31st December, 1920, both days inclusive, for the purpose of the payment of the dividend, guaranteed by the Canadian Government in accordance with the terms of the Agreement approved by the Proprietors on the 19th February, 1920.

Warrants for the dividend accrued from the 21st May, 1920 (the date of the appointment of the Committee of Management referred to in the Agreement) to the 31st December, 1920, will be forwarded on the latter date to all Proprietors of this Stock registered on the Books of the Company on the 3rd December, 1920.—By order,

H. H. NORMAN, Secretary,

Dashwood House,
9 New Broad street, E.C.2,
30th November, 1920.

CITY OF REGINA

FOUR-AND-A-HALF PER CENT. DEBENTURES.

The City of Regina announces that the Interest COUPONS of the above-mentioned Debentures maturing 1st January, 1921, may be PRESENTED on and after the 13th December, 1920, between the hours of 10 and 2 o'clock (Saturdays excepted), at the Bank of Montreal, 47 Threadneedle street, E.C. 2.

Three clear days required for examination. Lists may be obtained on application at the Bank.

CITY OF SASKATOON

FIVE PER CENT. DEBENTURES.

The City of Saskatoon announces that the COUPONS falling due 1st January, 1921, on the above-mentioned Debentures may be PRESENTED on and after the 13th December, 1920, between the hours of 10 and 2 o'clock (Saturdays excepted), at the Bank of Montreal, 47 Threadneedle street, E.C.2. Three clear days required for examination. Lists may be obtained on application at the Bank.

CITY OF CALGARY.

FOUR-AND-A-HALF PER CENT. AND FIVE PER CENT. DEBENTURE LOANS.

The City of Calgary announces that the COUPONS falling due 1st January, 1921, on the above-mentioned Debentures may be PRESENTED on and after the 13th December, 1920, between the hours of 10 and 2 o'clock (Saturdays excepted), at the Bank of Montreal, 47 Threadneedle street, E.C.2.

Three clear days required for examination. Lists may be obtained on application at the Bank.

CENTRAL ARGENTINE RAILWAY, LIMITED.

Notice is hereby given that the TRANSFER BOOKS of the 4% Debenture Stock and the 3½% Central Debenture Stock of the Company, and the Registers of Debenture Stock loaned to H.M. Treasury under Scheme "B," will be CLOSED from the 8th to 20th December, both days inclusive, for the preparation of interest warrants for the half-year ending 31st December, 1920.

F. FIGHIERA, Secretary.

3a Coleman street, London, E.C.2.
2nd December, 1920.

The Bank of Montreal, No. 47 Threadneedle street, E.C.2, have been instructed to make the following announcement:

DOMINION STEEL CORPORATION, LIMITED.

COMMON DIVIDEND No. 27.

A DIVIDEND of One and a-Half per cent. upon the Common Shares of the above Dominion Steel Corporation, Limited, has been declared PAYABLE 1st January, 1921, to Shareholders of Record 4th December, 1920. Coupon No. 27, relating to Share Warrants to Bearer, will be paid on and after 1st January, 1921, on presentation at the Bank of Montreal in London or in Montreal.—By order of the Board of Directors.

C. S. CAMERON, Secretary.

Sydney, N.S.,
1st December, 1920.

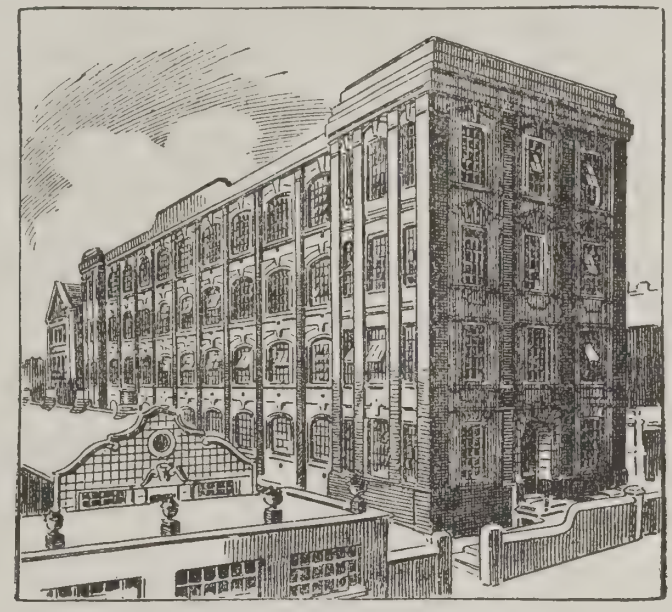
National Diamond Factories

(BERNARD OPPENHEIMER), Limited.

(Incorporated in England under the Companies Acts, 1908 to 1917.)

ON MONDAY NEXT AN ISSUE OF

£1,000,000 8 per Cent. Six Year Convertible Secured Notes at Par



In denominations of £1, £5, £10, £25, £50, £100 and £500

WILL BE ADVERTISED IN THE LONDON AND PROVINCIAL NEWSPAPERS.

The Notes will be repayable at 105 per cent.

Holders of the Notes will have the right up to 1st January, 1924, to convert their holdings into Ordinary Shares of the Company at par.

Actual Minimum yield, £8 16s. 8d. per cent.

Actual Maximum yield, £9 5s. 0d. per cent.

The East Factory at Brighton.

Other Factories at FORT WILLIAM, CAMBRIDGE and WREXHAM.

The Notes will be fully secured, as the net assets of the Company exceed £1,300,000, to which will be added the proceeds of the issue.

Mr. Bernard Oppenheimer, the Managing Director, estimates that when 2,000 diamond workers are employed, for which number the factories are equipped, **the profits should amount to not less than £400,000 per annum.**

The whole of the issued Ordinary Share Capital of the Company was subscribed for at par in cash.

Trustees for the Noteholders—

Barclays Bank, Limited.

Directors.

BERNARD OPPENHEIMER, Chairman of Directors and Managing Director of the South African Diamond Corporation, Limited, Chairman and Managing Director, Halton House, Holborn, E.C.

OFFER FOR SALE AT 94 PER CENT.

OF

£1,050,000 8 per Cent. Secured Debentures

(Part of an Authorised issue of £1,100,000).

Redeemable by drawings at 106 per cent. within 20 years by means of a Cumulative Annual Sinking Fund.

The above Debentures will be secured by a Trust Deed to be executed in favour of **Baring Brothers & Co., Limited,** constituting the Debentures, in addition to being a direct obligation of the Company, a first specific charge on £1,915,500 (par value) 6 per Cent. Prior Lien "B" Bonds.

The Debentures will be to Bearer in denominations of £100 and £500 each, with coupons attached representing the half-yearly interest payable 1st January and 1st July in each year. The first coupon, payable 1st July, 1921, will be for a full six months' interest.

Principal and interest payable at the offices of **Baring Brothers & Co., Limited.**

The amount of the interest on the £1,915,500 Prior Lien "B" Bonds deposited with the Trustee as Collateral Security, namely, £114,930, will be sufficient to provide the interest on the £1,050,000 Debentures, namely, £84 000, and the sinking fund necessary to redeem the Debentures within 20 years by annual drawings at 106 per cent. the first redemption by drawing to be made on the 1st July, 1922.

The Proceeds of any prior Lien "B" Bonds held by the Trustee, which may be drawn from time to time by the operation of the sinking fund, will be applied in accelerating the redemption of the 8 per Cent. Debentures.

The Company reserves the right to redeem on any interest date the outstanding Debentures or any part thereof at 106 per Cent. on giving six months' notice by advertisement in *The Times*.

The balance of the authorised amount of Debentures, namely, £50,000, will only be issued if and when the £84,500 Prior Lien "B" Bonds, still outstanding in the hands of the Public, are acquired and deposited with the Trustee as additional collateral.

Power is reserved to the Company with the consent of the Trustee to increase the Debenture Issue for the purpose of acquiring any Prior Lien "A" Bonds at present outstanding in the hands of the Public provided the interest on such Prior Lien "A" Bonds, which must be deposited with the Trustee, is sufficient to meet the interest on the amount by which the Debenture Issue is increased and to provide for the redemption of the same at 106 within 20 years by annual drawings.

THE LONDON COUNTY WESTMINSTER & PARR'S BANK, LIMITED,

are authorised by the owners, the **SPANISH SECURITIES COMPANY, LIMITED,** to receive applications for the above £1,050,000 8 per Cent. Secured Debentures at **94** per cent. payable as follows: **On Application, 5 per Cent.; On Allotment, 20 per Cent.; On 6th January, 1921, 69 per Cent.**

The final instalment may be paid up in advance on allotment under a discount of 7 per Cent. per annum.

The following letter has been received from the President of the Barcelona Traction, Light and Power Company, Limited.

30th November, 1920.

To the **SPANISH SECURITIES COMPANY, LIMITED,**
3, LONDON WALL BUILDINGS, LONDON, E.C.

GENTLEMEN,—The Barcelona Traction, Light and Power Company, Limited (referred to as "the Company"), is incorporated under the Laws of Canada, and, being a holding Company, does not itself carry on business in Spain, but owns practically all the Stock and Bonds of the Ebro Irrigation & Power Company, Limited, a Company operating in that country large hydro-electric plants, transmission lines and power stations. The Company also owns (with the exception of a few Shares) the Capital of various other Spanish Companies which distribute light and power in the City of Barcelona and in many of the towns in the surrounding districts; it also owns all the Shares of the Ferrocarriles de Cataluña, a Spanish Company operating the electric railway between Barcelona and Tarrasa.

The £1,050,000 8 per cent. Secured Debentures which you are offering for sale have been created for the purpose of enabling the Company to reduce its liability in respect of £1,915,500 of its own Prior Lien "B" Bonds, issued at par in the year 1915 to French Banks and other creditors of the Company in settlement of previous cash advances; an operation now rendered possible by the fall in the French franc. These £1,915,500, Prior Lien "B" Bonds form part of a total authorised issue of £3,000,000, of which £2,225,000 are outstanding, the balance being in the Treasury of the Company.

The only Securities which rank ahead of the Prior Lien "B" Bonds are £2,000,000 7 per Cent. Prior Lien "A" Bonds.

After providing the interest payable on the Prior Lien "A" Bonds, the net revenue from all sources, available for payment of the interest on £2,225,000 "B" Bonds, was:—

*In	**1917**	**£406.153**
*	**1918**	**£410,973**
†*	**1919**	**£366,266**
	1920 (Two months estimated)	**£415,000**

Under agreements with the holders of the Prior Lien "B" Bonds and the First Mortgage Bonds, all revenue, including profits on exchange, available between June, 1914 and June, 1918, after payment of the interest on the Prior Lien "A" Bonds, was used for capital expenditure, the total exceeding £1,200,000. In 1919, the amount of revenue available, after payment of the agreed interest on the "B" Bonds, the First Mortgage Bonds and the 6 per Cent. 6-Year Bonds, was set aside for depreciation, and the same procedure is being adopted for the current year. The sum so applied in 1919 was over £100,000, and will be larger in 1920.

The earnings of the operating companies should be greatly increased in the future by the sale of electricity from additional hydro-electric works which have recently come into operation and also by the fact that existing power contracts, shortly expiring, will be renewed on more favourable terms.

The amount of the interest on the £1,915,500 Prior Lien "B" Bonds deposited with the Trustee is sufficient to provide the interest on the Debentures offered for sale and to redeem them at 106 per cent. within 20 years by annual drawings commencing in July, 1922, without increasing in any way the annual charges of the Company.

Yours faithfully,
E. R. PEACOCK, President.

*Calculated at an average rate of exchange of Pts. 25 per £ sterling.
†Decrease due to strike.

If any applications are accepted for less than the full amount of Debentures applied for, the balance of the deposit money will be credited towards the amount due on the instalment payable on allotment. The deposit on any application not accepted will be returned in full through the post. Interest at 10 per cent. will be charged on overdue instalments, and failure to pay an instalment when due will render the amount previously paid liable to forfeiture.

Interim Scrip of the Barcelona Company will be issued in exchange for fully-paid Allotment Letters after the date fixed for payment of the final instalment. The Definitive Debentures will be delivered by Messrs. Baring Brothers & Company, Limited, at 8 Bishopsgate, London, against surrender of the Interim Scrip on and after the 1st March, 1921.

A copy of the Contract between the Spanish Securities Company, Limited, and the Barcelona Traction, Light and Power Company, Limited, under which the Spanish Securities Company have acquired the Debentures, and the Contracts under which the Prior Lien "B" Bonds have been purchased and a print of the form of the Trust Deed securing the Debentures (subject to such modifications (if any) as the Trustee may require) can be inspected at the office of Mr. H. Malcolm Hubbard, Solicitor, 3 London Wall Buildings, E.C., or of Messrs. Bischoff, Coxe, Bischoff and Thompson, of 4 Great Winchester Street, London, E.C., the Solicitors to the Trustee.

The £1,915,500 Prior Lien "B" Bonds have been acquired by the Spanish Securities Company, Limited, from French Banks and other holders for £907,966, and the £1,050,000 8 per Cent. Secured Debentures have been issued to that Company against the deposit with the Trustees for the Debentures of the Prior Lien "B" Bonds.

The Spanish Securities Company are paying an underwriting commission of 3 per cent. with an overriding commission of 1 per cent. and all other expenses of the present offer of sale.

A brokerage of ½ per cent. will be paid on acceptances made on applications for the Debentures bearing the stamps of Bankers, Brokers, or other recognised agents.

Application will be made to the Committee of the London Stock Exchange for special permission to deal in the partly-paid Allotment Letters and fully-paid Interim Scrip, and, in due course, for an official quotation for the Debentures.

Prospectuses and Forms of Application may be obtained from:—

THE MONEY MARKET.

CHIEFLY owing to the rapid sale of Treasury bills, the great expansion of credit necessitated last week for War Loan interest and maturing Exchequers has been materially reduced, and it is already evident that the market's supply of cash is not much more than sufficient. Discount rates have consequently stiffened, the prospect of stringency till the end of the year being for the time being a stronger influence than hopes of relaxation after December 31st has been turned. So strong is this view that bills due within the year have been taken at rates ranging down to 4½ per cent. The position in the commodity markets and the liquidation involved by it is still, and must be for some time, a cause of anxiety.

	Dec. 10, 1920.	Dec. 3, 1920.	Nov. 26, 1920.	Nov. 19, 1920.	Previous Rate and Date Changed.

* * * *

The Bank return shows a marked improvement on last week's. The stock of gold has risen by £886,000, and the circulation has declined by £71,000, and the Reserve is thus £957,000 higher, with its proportion to liabilities at 9.3 per cent. Government securities declined by 13 millions, and Others by 3, and so there was a decrease of 16 millions in Private Deposits, with a small increase in Public. The circulation of currency notes expanded by £3,194,000 to £354,298,000, which includes £2,834,200 for notes called in, but not yet cancelled. The Fiduciary issue is £304,213,800, or 16,386,200 below the maximum. A similar expansion took place a year ago.

* * * *

The following table shows public income and expenditure for the week ended December 4, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	16·806	Supply Services	20·360
From Borrowing	47·546	Interest, &c., on War Debt	44·140
From Exchequer Balances	·984	Sundries	·836
	65·336		65·336

These operations increased the National Debt by the sum of £47,545,805, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Advances by Bank of England	+ 30·750	Surrenders of Bonds, &c.	— 1·723
Advances from Public Deprts.	+ 6·550	Depreciation Fund	— ·660
Treasury Bills	+ 30·212	Exchequer Bonds repaid	— 19·660
Treasury Bonds	+ 2·050		
National Savings Certificates	+ 20		
Sundries	+ 7		
	+ 69·589		— 22·043

The floating debt increased by £67,435,000 during the week. Exchequer bond repayment absorbed £19,660,000. Subscriptions to Treasury bonds amounted to £2,050,000. This amount is larger than usual, presumably owing to conversions into Treasury bonds of Exchequer bonds that matured on December 1st.

* * * *

After the comparative steadiness of the last fortnight the exchange market has again experienced a disturbed week. Dollars, which closed seven days ago at about 3.48¾, fell rapidly on Monday and Tuesday to about 3.43¼. Since then there has been an irregular, but slightly upward tendency, the quotation yesterday morning being about 3.45-45½. Futures for one month have widened again slightly, being 1¼ to 1⅝ cents over spot, as compared with 1 to 1½ cents a week ago. Two and three months forwards, however, have remained steady at 2½-3½ cents and 4½ to 5½ cents over spot respectively. In some quarters the fall is put down to heavy Continental buying of dollars over London, but although there have, of course, been such purchases, the cessation of the special operations referred to a fortnight ago and the usual autumn pressure are fully sufficient to account for this movement. Paris from 57.60 on the 3rd has moved up to 58.70, after being somewhat higher in the early part of the week. Brussels from 54.30 has moved in sympathy to 55.60, the spread between the two rates having again narrowed. Apparently Belgium is now feeling more seriously the effect of the general collapse in prices, and there are rumours, at present unconfirmed, of considerable difficulty in several quarters. The quotation for French futures is practically unchanged at 27 to 32 centimes per month below spot, for Belgian futures it is a little wider at 32 to 38 centimes. Lire have risen about 2 to 98½. Among other exchanges, the spectacular movement of the week has been the continued rise of the drachma from 42 on December 3rd and 36 at the beginning of November to over 47. Recent political events are fully sufficient to explain this movement, which is, of course, largely of a speculative nature. It is unlikely that London is much affected, as operations in the drachma are small. Madrid continues to rise, being slightly over 27 as compared with 26.75 a week before, and if anything, the economic outlook in Spain has grown worse. The Scandinavian exchanges show a marked movement against London, due largely to the gradual operation of the decrease in imports, and somewhat to the relief afforded by money raised in the United States. The export position, however, in none of these countries gives reason for the expectation of any lasting improvement as yet, while labour conditions are bad. Amsterdam has also moved some 11 cents against us to 11.29, forward florins being quoted at 1 to 2½ cents per month over spot. The Polish mark has now succeeded in going above 2,000, and to judge by the rate at which currency is being issued, there would seem to be no reason why the rise should not continue. The Viennese rate, although quoted here somewhere about 1,200, is far higher in Vienna itself, and is also rising rapidly. The mark, too, is moving upwards again, having risen about 15 marks on the week to 259, while the almost insurmountable difficulties which the Finance Minister is meeting in his attempt to prevent further increases in expenditure would suggest that the printing press will continue to work as actively as before. The quotation for futures is 1 to 1½ marks per month below spot. In South American rates both Buenos Ayres and Monte Video show a strong movement against London, while Rio is on balance pretty steady, and Valparaiso went slightly in our favour. In the silver market, in spite of some bear covering, pronounced weakness in America has brought the price still lower, so that on the 9th it stood at 39⅜d, lower than at any time since July, 1917. Both Hong Kong and Shanghai rates have been very weak indeed in sympathy. There seems little reason to expect much relief for the silver market for some time to come. The downward movement in the rupee has continued, rates on Friday being quoted at 1s 4⅝-⅞d, and there are a good many stories in circulation of trouble in India.

EVENTS OF THE WEEK.

DECEMBER 4TH.—Acting President of Sinn Fein telegraphs Prime Minister asking what steps he proposes towards Irish peace. Mr Asquith speaks at Albert Hall meeting on reprisals.

DECEMBER 5TH.—Argentina leaves League of Nations.

DECEMBER 6TH.—Six members of Dublin Corporation arrested. Gold and Silver Export Bill debated in Commons. Twenty-two State banks and one National bank in North Dakota close their doors.

DECEMBER 7TH.—Prince of Wales in the City. Debate in Commons on Dyestuffs Bill.

DECEMBER 8TH.—Agriculture Bill passes second reading in House of Lords. Cambridge University rejects proposal to admit women to full membership.

DECEMBER 9TH.—Economy debate in Commons.

DECEMBER 10TH.—Premier's statement on Irish policy.

ECONOMY AND GOODWILL.

THURSDAY'S debate in the House of Commons on national expenditure gave the Government much too easy a victory. The movers of the resolution threw away a strong hand by calling too high, and demanding the reduction of next year's expenditure to 808 millions, and so enabled the Government to evade the real issue and carry a great majority of the House by a repetition of indefinite promises of economy and a recital of difficulties which they are there to overcome. But the debate had its uses in enabling Mr Chamberlain to tell the House that in spite of supplementary estimates amounting in all to 58 millions, the anticipated surplus for debt redemption is likely to be approximately realised. Savings in expenditure will more or less set off the extra charges, and with regard to revenue, though there will be considerable variations under the different heads, there is no reason to expect that the sum anticipated will not be collected. He also showed that last year we paid off 86 millions, and in the current year we shall pay off 90 millions of foreign debt. This is all to the good, but when the Chancellor goes on to ask "Need we be gloomy?" he seems to miss the true meaning of the present resentment against the level of public expenditure. "Gloomy" we certainly need not be, for gloom is not a good frame of mind in which to attack a difficult task, but the Chancellor himself gave a good reason why we should approach our financial problem with much more serious resolution. This reason is the great change in the state of trade that has taken place in the last few months. As he says, "Trade is stagnant. Orders are hard to obtain. Old orders are being cancelled, and a feeling of anxiety and unrest is a natural consequence." With such a situation confronting the country, the guardians of its purse are bound to apply the most meticulous scrutiny to the spending of every pound, so that industry may not be hampered in facing the difficult problem described by the Chancellor. The country feels that the present Government, with its obedient majority, is not putting nearly enough vigour into this task of reducing expenditure, and it will not get much comfort from the complacent comparisons made by the Chancellor and by the Prime Minister of our Budget position with that of other countries. What other countries may be doing—especially when they are committing, or being forced into economic blunders—is not to the point. The business world feels that present taxation is more than industry can stand and must be reduced forthwith, and its view is supported by Mr Chamberlain's own picture of the present state of industry.

Great as is the importance of this question of economy on the part of the State, equally urgent is the problem of restoring the machinery of international trade by making good the great gap in it caused by the impoverishment of Central Europe and diminished production over the whole Continent. Mr Paul Warburg, an exceptionally well qualified observer, has lately published a speech delivered by him on the occasion of his return from Europe to America, under the title of "Europe at the Cross Roads."* In the very effective picture that he draws of the present economic outlook, he compares Europe to a big steamer sunk by a torpedo—"It is idle to discuss to-day what kind of a Ritz restaurant or social hall she should have when she is afloat again. The first question is: 'Can we save her at all?' The second is: 'After we raise her, can we repair her engines and make her go?' It is evident that we cannot raise her without first stopping the leak—the breach, still wide open, between France and Germany; we cannot make her go without straightening out her machinery—that is, without settling the labour question. When these two tasks are disposed of, I am confident the good old ship Europe will gradually right herself." Besides these two needs, which are the essence of the whole problem, there are the more technical questions of Government economy in all countries, towards which the establishment of real peace would be an enormous help, the consequent reduction of inflation, a steadying of the market in rates of exchange, and, above all, arrangements by which the present trade deadlock can be solved by bridging the gulf between holders of goods that they cannot sell, and eager, but impecunious, customers who cannot buy. When we remember the tremendous shock that the war gave to the world's economic organisation, there is little wonder that this deadlock should have arisen; the wonder is that it is not a good deal worse. But until it is relieved, no country depending on world trade for prosperity can make much progress towards real recovery. This relief cannot be effective until the politicians have made up their minds about the indemnity question, so that those who may be inclined to lend money to the defeated countries, or to traders and manufacturers therein, can know where they will stand as creditors. In the meantime, something is being done. In Austria, where the needs are most urgent, an association for securing and supervising raw material credits has been formed by the Creditanstalt für Handel und Gewerbe. It is called the Allgemeine Waren-Treuhand-A.-G., and will assist the creation of credits for purchases of the materials, under which the materials remain the property of the lender through all the stages of manufacture until the loan is repaid. Its operations, and those of similar organisations existing or about to be formed, will be assisted by legislation lately passed in Austria, securing the rights of foreign firms granting credits against any claims made by third parties. Declarations have also been made by the Austrian Government and the Reparations Commission that they will under no circumstances requisition either raw material or finished goods, and it is reported in London that the Reparations Commission is likely to guarantee a considerable proportion of such credits, presumably subject to its selection. Arrangements are also being made for the sale of South African wool to Germany, in this case the necessary credits being secured, according to a telegram in the *Times* of December 8th from its Berlin correspondent, on German property confiscated by the South African Government. It is by measures such as these, by the freest interchange of commodities, and by leaving capital free to find the safest and most profitable outlet, that we shall restore trade and free ourselves from the dangers involved by half employment and unemployment. Our trade figures indicate a considerable balance available for lending abroad, and it could not be better employed than in restoring the world-wide trade, on which our economic greatness was well and truly founded until the chief nations of the earth,

including ourselves, found it necessary to knock it to pieces because we could not find a better way of settling our quarrels. But the most effective assistance can, of course, be rendered by the United States. Our New York correspondent has in recent letters repeatedly recorded improvement in the American position, and the president of the Guaranty Trust Company of New York, Mr Charles H. Sabin, has issued a statement enlarging on the confidence and hope that the present situation inspires. "This country," he says, "will harvest this year one of the largest crops in its history; its transportation congestion has been relieved, and its railroad system is for the first time in a decade on a sound financial and operating basis; we have passed through a national election, and assured four years of sane administration of public affairs; our banking system has withstood the greatest credit strain in its history, and is on a sound and workable basis; the accumulated surplus of five years of splendid prosperity is stored in many ways for our continued use; the markets of the world demand our products, and a great mercantile marine is prepared to transport them; this country has not been over-built or over-extended in any of its underlying activities, and faces no program of readjustment along these lines such as usually precipitates panic conditions. We are in a sounder financial, industrial, and political condition than any important nation in the world." For this enviable state of affairs our American cousins have in great measure to thank the quarrels and follies of this mouldy old hemisphere. They have lent it billions of dollars, but they will never get them back unless they help it on to its legs again and take its goods and services in payment.

OVERSEAS TRADE IN NOVEMBER.

The Board of Trade returns of overseas trade in November are surprisingly good, for the evil effects of the coal strike which the figures were expected to show are not conspicuous. British exports, at £119.4 millions, were nearly £7 millions better than in October, and the second highest recorded this year, being exceeded only in July. Re-exports, it is true, were £3 millions less than in October, but their value is only a trifle below that recorded in August and September. One can only assume that, if it had not been for the coal strike, the figures would have been better still. Coal exports certainly were still below par in November, the quantity shipped being only 1,360,724 tons, against 2,747,476 tons in November, 1919. A summary of the value figures for November and the 11 months of 1919 and 1920 reads as follows:—

Month of November.

	1919.	1920.	Increase or Decrease in November, 1920.	
	£	£	£	%
Imports	143,545,201	144,260,183	+ 714,982	+ 0·5
British exports	87,110,531	119,364,994	+ 32,254,463	+ 37·0
Re-exports	20,266,409	13,114,859	— 7,151,550	— 35·3
Total exports	107,376,940	132,479,853	+ 25,102,913	+ 23·4
Excess of imports over total exports	36,168,261	11,780,330	— 24,387,931	— 67·0

Eleven Months Ended November 30.

	1919.	1920.	Inc. or Dec. in 1920.	
	£	£	£	%
Imports	1,462,761,513	1,794,631,153	+331,869,640	+ 22·6
British exports	707,517,724	1,238,938,504	+531,420,780	+ 65·9
Re-exports	138,159,023	209,706,901	+ 71,547,878	+ 51·6
Total exports	845,676,747	1,448,645,405	+602,968,658	+ 71·2
Excess of imports over total exports	617,084,766	345,985,748	—271,099,018	— 44.1

With only one month to pass, it is possible to make a rough estimate of what the 1920 trade balance will be. Assuming the December results to be similar to those of last month, the excess of imports on the published figures for the full year will be about £357 millions. If the semi-official estimate of "invisible" exports is correct, there will be a real balance for 1920 favourable to this country to the amount of about £290 millions, which, on paper, is a highly satisfactory record. But, unfortunately, while we have to make prompt payments for enormous imports from outside Europe, portions of the Continent to which we export largely have to be given terms of long credit, their power of paying waiting upon the revival of their ability to export. In view of the prevalence of complaints of stagnation in most branches of industry, the continued high level of the export figures may seem puzzling at first sight. The explanation of this apparent contradiction is that industry is still largely engaged in working off old orders. It is the striking decrease in the volume of new orders in recent months with which the complaints of industry are mainly concerned. Lancashire and Yorkshire are prominent centres of anxiety about the decline in demand, but both the cotton and woollen industries seem to have been busy with old orders for the export trade in November, cotton goods exports being nearly £10 millions and woollen goods exports £1¼ millions better than in November, 1919. If, as may be expected, exports in succeeding months show a substantial decline, it should not be forgotten that, apart from the reduction in raw material imports (which, as will be judged from the tables given below, has already begun), import values will be further lessened by the fall in prices, which has not in many cases yet produced any striking effect on the trade figures. The figures of cotton and wool imports in November may be quoted to show that the fall in prices has not yet taken full effect:—

	November, 1919.		November, 1920.	
	Quantity. Centals.	Value. £	Quantity. Centals.	Value. £
Sheep's and lambs' wool	850,956	8,382,833	459,360	4,024,477
Raw cotton	1,692,007	17,565,454	1,590,620	16,952,497

Little evidence of price changes is afforded by these figures, whereas the market prices of wool and cotton have fallen far below the quotations of a year ago. These and other very numerous price declines will affect the trade figures in due course. Apart from the figures for cotton good exports mentioned above, the chief individual increases in British manufactured exports in November compared with a year ago are:—Vehicles (+ £6.3 millions), iron and steel and manufactures thereof (+ £5.4 millions), machinery (+ £4.3 millions). Gold and silver imports and exports during November and the 11 months have been as follows:—

	Imports.		Exports.	
	November. £	Jan.-Nov. £	November. £	Jan.-Nov. £
Gold	9,528,366	46,575,936	4,714,150	87,035,581
Silver	991,297	8,669,599	1,330,058	10,301,250

Of our gold shipments in the 11 months, U.S.A. has taken £47,308,483, and British India £23,629,272. The account of stocks of dutiable articles in bonded warehouse shows tea stocks at 227,903,000 lbs, against 169,861,000 lbs a year ago, and 125,434,000 lbs in 1913. Stocks of unmanufactured tobacco, at 336,434,000 lbs, are also very much heavier than last year or in 1913.

Imports and exports for November and the 11 months of this year and last are classified below under 42 headings:—

Imports (Value C.I.F.).

THE FOUNDATIONS OF BELIEF IN FREE IMPORTS.

SIR ROBERT HORNE has told the Industrial Group of the British Commonwealth Union that a Bill dealing with dyes, key industries, dumping, and exchanges will be introduced as the first big measure of the Government next Session. This announcement by itself would be sufficient justification for re-stating the grounds of the Free Trade faith. But at the present moment—when more than two years have passed since the date of the Armistice—many of our most important imports, wheat, meat, butter, cheese, sugar, wool, are still subject to Government control, and trade with many European countries is so subject to restrictions that it is no exaggeration to say that we are suffering under as grievous restraint of trade as we were a hundred years ago—when Protection was rampant in its most offensive form.

Free Trade secures that every country produces those articles which it is best suited to produce. Under Protection capital and labour are turned into channels less profitable for the community, and at the expense of the community. This argument has never been better expressed than it was, exactly a hundred years ago, in the famous Petition of the Merchants of London, which was drawn up by Mr Tooke, and presented to Parliament by Mr Baring (one of the Members for the City, and afterwards Lord Ashburton). The Petition urged that foreign commerce was eminently conducive to the wealth and prosperity of a country, by enabling it to import the commodities for the production of which the soil, climate, capital, and industry of other countries are best calculated, and to export in payment those articles for which its own situation is better adapted.

"That freedom from restraint is calculated to give the utmost extension to foreign trade, and the best direction to the capital and industry of the country."

"That the maxim of buying in the cheapest market and selling in the dearest, which regulates every merchant in his individual dealings, is strictly applicable as the best rule for the trade of the whole nation."

"That a policy founded on these principles would render the commerce of the world an interchange of mutual advantages, and diffuse an increase of wealth and enjoyment among the inhabitants of each State.....

"That of the numerous protective and prohibiting duties of our commercial code, it may be proved that while all operate as a very heavy tax on the community at large, very few are of any ultimate benefit to the classes in whose favour they were originally instituted, and none to the extent of the loss occasioned by them to other classes.....

"It is against every restrictive regulation of trade, not essential to the revenue—against all duties merely protective from foreign competition—and against the excess of such duties as are partly for the purpose of revenue and partly for that of protection—that the prayer of the present Petition is respectfully submitted to the wisdom of Parliament."

The reader will note that the first four paragraphs of the Petition apply generally to all countries that do any foreign trade, and claim that Free Trade is best in any case, for the more a country shuts up its own market, the more it excludes itself from others, and debars itself from buying in the cheapest market. This was shown by the fact of the United Kingdom possessing half of the commercial marine of the world before the war because the United States, Germany, and France—our principal trade rivals—had so raised the cost of the materials employed in shipbuilding that their shipbuilders found it impossible to compete with ours.

The contention that very few of the numerous protective and prohibiting duties of our commercial code (in 1820) were of any ultimate benefit to the classes in whose favour they were originally instituted, and none to the extent of the loss occasioned by them to other classes, was proved up to the hilt by the evidence taken nearly twenty years later before the Import Duties Committee. This Committee was the result of pertinacious effort on the part of Mr James Deacon Hume, who retired in 1840 after a service of fifty years in the Customs and Board of

Trade Departments. His views were supported by Mr Joseph Hume and Mr Pelham Villiers in the House of Commons. The Committee was appointed on May 5, 1840, and its report was published on August 6th. The evidence given to the Committee so impressed Sir Robert Peel that he began as speedily as possible (after his taking office in September, 1841) to reduce the tariff.

It is instructive to note how few articles produced enough to pay for the cost of collection. In the appendix to the Import Duties Committee's Report the articles subject to customs duties are grouped under six heads, as shown in the following table :—

Customs Dues upon Articles Imported by the U.K. in 1839.	Articles.	Produce of Duties.
		£
A. Imported in a raw state to be used in our manufactures	262	2,092,629
B. Imported partially manufactured	101	1,056,246
C. „ manufactured	214	479,403
D. „ for food	110	18,303,780
E. Prohibited	19	..
F. Not belonging to any of the foregoing heads	156	190,037
Total	862	22,122,095

No duty was received upon 147 articles. It appears, therefore, that the twenty-two millions odd was received in respect of 715 paying articles, articles of food producing over 18 millions, and raw materials over two millions. As a source of revenue Protection is open to question on the ground of equity as compared with direct taxation which permits graduation according to the circumstances of the taxpayer. On the ground of efficiency in producing revenue, it is equally open to criticism. Protectionist countries cannot even raise revenue from import duties to the extent that the United Kingdom did under Free Trade in 1912.

	Population in 1912.	Import Duties Collected in 1912.	Yield per Head of Population.
		£	£
United Kingdom	45,663,000	36,139,000	·791
France	39,660,000	27,254,000	·687
United States	95,411,000	63,521,000	·666
Germany	66,146,000	38,112,000	·576
Russia	176,000,000	34,925,000	·193

When we add that the United Kingdom also raised Excise duties in 1912 to the amount of £39,657,957, the strength of the revenue case for Free Trade becomes even more striking.

To sum up: By Free Trade we mean a fiscal system under which the Government imposes no duties except for revenue, and then counterbalances them by corresponding Excise duties, and favours no manufacture at the expense of others, leaving trade to follow its natural course.

In 1842, Sir Robert Peel (convinced by the evidence furnished in the Report on the Import Duties) reduced duties on 750 articles "to revive commerce and effect such an improvement in the manufacturing interests as would react on every interest in the country." Revenue increased. Trade improved. Capital was found for constructing railways. In 1845 Sir Robert removed 450 articles altogether from the tariff, and in 1846 repealed the Corn Laws. The year 1848 was a year of revolutions on the Continent; France, Spain, Poland, Hungary and Italy all suffered. Insurrections in Germany and Austria were harshly suppressed. But the United Kingdom maintained peace within her borders.

LABOUR IN SOVIET RUSSIA.

(BY A RUSSIAN CORRESPONDENT.)

THE economic system of the Bolsheviks is founded on the distribution of work by the State, the worker not being at liberty to choose the kind of work he is to do. In the application of this system the Bolsheviks make use of rationing and "work books." The complicated police supervision and espionage make it almost impossible to evade forced labour. Nevertheless, in spite of all their decrees and severity, the Soviet authorities cannot obtain the necessary number of workmen. The Bolshevist Press, especially the economic papers, are now loudly complaining of the shortage of labour in Soviet Russia. For example, the demand for labour by the enterprises of the Petrograd National Economic Soviet is as follows (see No. 225 of *Ekonomicheskaia Zhizn*) :—

Industries.	Demand for Labour in Second Half of the Year.	Available.	Deficit.	Percentage of Deficit.
Metallurgic	35,227	26,467	8,760	25
Foodstuffs	9,635	9.290	345	4
Tanning	8,610	6,622	1,988	23
Textile	7,681	5,682	2,000	25
Chemical	7,028	5,406	1,622	23
Electrical	6,724	3,399	3,325	49
Sewing	6,366	5,770	596	9
Printing, &c.	4,765	4,765	..	..
Paper	3,130	2,435	695	22
Woodworking	2,701	1,380	1,321	49
Mineral	1,502	1,032	476	31
Utilisation of waste products	745	390	355	47
Distilleries	236	236	..	..
Total	94,351	72,874	21,477	23

This shortage of labour is the result, on the one hand, of the absolute decrease in the number of workmen, and on the other of the decline in the productivity of their labour. Life in Soviet Russian towns is so hard, and food is so uncertain, that Russian workmen have been forced to emigrate to the villages. This was natural since the majority of Russian workmen had not severed their connection with their villages, and even if some of them had no land of their own, they always had some relatives on the land. The central statistical board calculated that by July 1, 1920, the manufacturing industries of 46 provinces had only one million workmen, which is a reduction of 31 per cent., as compared with the figures of the census for 1918 (see "The Crisis of the Shortage of Labour," No. 225 of the *Ekonomicheskaia Zhizn*). In No. 218 of this paper, in an article entitled "Statistics of Moscow Factory Hands," it is stated :—

> The aggregate number of workmen employed in all manufacturing undertakings (both working and those closed down) is 147,424 hands for August, 1918, 105,210 for June, 1919, and 83,363 for July 1, 1920; that is to say, in 20 months their number has decreased 40.8 per cent. The number of hands in working undertakings had declined from 142,855 (in 1918) to 79,033 (July, 1920), while the number of hands in the closed factories had risen from 4,571 (August, 1918) to 18,973 (June, 1919), and had then fallen to 8,330 (June, 1920).

At first sight there would appear to be some error here. Why should there have been an *increase* in the number of hands employed in *closed* factories? Nevertheless, such is the case. The article proceeds :—

> A considerable number of workmen and employees have been found only in the closed undertakings of two producing groups, viz., in 35 of the closed down cotton mills there are 6,459 workers and 766 in the technical staff, and in 37 woollen mills there are 1,088 hands and 167 in the technical staff. The workers in closed factories are simply pensioned.

As already stated, the labour crisis is caused not only by the absolute decrease in the number of workmen, but also by the excessive decline in the productivity of labour.

The writer of the article just quoted says that at the 1913 rates there should be 681,600 railwaymen, or 12.8 men per verst (0.66 of a mile), whereas "actually in May, 1920, there were 1,500,000 railwaymen, or 28.2 men per verst." The writer then explains this decline in the productivity of labour by reference to the difficult conditions of life, particularly the shortage of foodstuffs, and asserts that, taking the food shortage into consideration, the Russian workman's productivity is now greater than before the Revolution. There is not the slightest doubt that hunger is really one of the principal causes of poor work. Nevertheless, it is only one of the causes. The general slackness of the population, the decline of discipline, and also other causes of a purely political character, hatred of the Soviet authorities, and disinclination to work for them—these are the reasons which probably are more important factors than the food shortage. This view is corroborated by the following note in No. 223 of the *Ekonomicheskaia Zhizn* :—"Last September the workshops of the North-Western railways delivered 1.4 locomotive sent in for thorough repair, as against 4.37 in

August, and 4.49 in July. *The decline in productivity is to be explained by the wholesale decline of labour discipline among the workmen.* Measures have not been taken to restore the output to its normal level."

It is true that, apart from "the decline of labour discipline," the North-Western Railway workmen have long been suspected by the Soviet authorities of being counter revolutionaries. At the end of September last the Defence Soviet announced that the workmen of this railway tried to prevent "labour Saturdays" taking place, and threw bolt-nuts at the workers.

The Bolsheviks are trying to cope with this labour crisis in two ways. First of all, they try to raise the productivity of labour, and, secondly, they increase the number of workmen by means of conscription. Contrary to all the theories of Socialism, the Bolsheviks have long ago adopted the system of piece work, and at the present time they have worked out a system of premiums for higher output, and are applying it everywhere. What they are principally interested in, however, is the problem of increasing the number of workmen.

"In order to satisfy this constantly growing demand for labour," says the leading article in No. 218 of the *Ekonomicheskaia Zhizn,* "and to provide our undertakings with skilled workmen, we have been seeking during the last three years for the most suitable measures for obtaining and utilising labour, and for the best means of distributing the labour already available among the various industries and undertakings. We have now adopted the system of labour mobilisations of all persons who are not already engaged in work of social utility." With its usual directness, the Soviet Government has claimed its right to the labour of all its subjects. Special institutions have been established for the purpose of superintending the distribution and registration of mobilised labour. The "Chief Committee of Labour" is placed at the head, with corresponding local committees of labour and of manpower. All the inhabitants have been provided with "work books," which have become their passports. Every work book has the Soviet coat-of-arms on the first page with two mottoes: "Whosoever will not work, neither shall he eat," and "Proletarians of all countries, unite!" Then comes detailed information concerning the holder of the book; his age, occupation, under whose jurisdiction he is, and notes of compulsory labour performed. Without such a book the inhabitants of Soviet Russia cannot move a step, cannot get either ration cards or permits to travel from one town to another, and if there are no entries of work done, the holders will be sent to the "Labour Deserters' Committee," which imposes wartime penalties, *i.e.,* considers labour deserters as deserters from the army. As a matter of fact, the inhabitants of Soviet Russia are now serfs of the State, like the Crown serfs in Russia before the liberation of the serfs on March 17, 1861, with the exception that then such serfs were not shot for not doing their work, and had more rights (and especially the right of disposing of the fruits of their labour) than the inhabitants of a Socialist State in the twentieth century.

ARGENTINE LAND COMPANIES.

We have explained in a previous article on this subject that land companies operating in Argentina may be roughly grouped into two classes. The first group consists of those companies which derive their income from acquiring big tracts of land and, after making improvements by developing the land in particular and the district in general, according to the resources at the company's disposal, from reselling the land in smaller plots. Some companies, in addition, are willing to finance land cultivators by granting loans against mortgages on approved property, or by selling land to be paid for by instalments. Those companies in the second group obtain their main source of revenue from cultivating land with a view to marketing the produce.

During the war, however, land sales declined, and in consequence many companies in the first group developed their estates in other directions. Some idea of the change which took place may be gathered from the following figures, extracted from the annual accounts of the Argentine Land and Investment Company. For the year ended June 30, 1913, sales of land contributed £43,190 to a total revenue of £97,705. But then came the war, and receipts from this source began gradually to fall away, until in the accounts for 1917 the low-water mark figure of £1,257 is found out of a total revenue of £54,568. In 1918 land sales represented £1,307 out of a revenue of £97,958; a slight increase is recorded for 1919, while in the year under review a total is given of £24,602 out of a revenue of £135,594. The other part of the revenue was usually made up from receipts for rent and interest. In a selected group of companies, the positions of which we examine and tabulate below, perhaps the most remarkable feature for the past year has been the extent to which profits have been swollen by the high rate of exchange on London. As will be seen, in the table appended, five companies with a gross total profit of £868,315, show that their profit on exchange amounted to £149,889.

	Profit on Exchange. £		Total Profits. £
Tecka	23,180	.....	130,614
Argentine Land	24,100	.....	135,594
Cordova	47,280	.....	214,565
Rio Negro	38,100	.....	182,772
Argentine Southern	17,229	.....	204,770
	149,889	.....	868,315

Forestal Land, Timber and Railways and Leaches Estates do not disclose profits from this source.

Apparently conditions throughout the country have varied considerably. In some camps, notwithstanding a good winter, spring pastures were backward, while districts were visited by locusts, which did considerable damage. Sheep suffered considerably during the hard winter of 1919, but recovered well, and were in a satisfactory condition throughout the remainder of the year. Live stock generally, with exceptions, of course, in various parts of the country, have enjoyed good health. The Cordova Land, in its report, referring to the health of its cattle, mentions "the number of deaths, as also the percentage, being considerably below the average of the past seven years." The exceptional condition of the wool market calls for notice. The Argentine Southern Land obtained a revenue of £90,000 from its crop, as compared with average receipts from wool for the preceding five years amounting to £43,468. The chairman of the Rio Negro, at the general meeting of the company, pointed out that the main source of its increased income was wool sales, although it was admitted that the high rate of exchange was a highly satisfactory secondary advantage.

In the following summary we show the gross revenue and net profits of seven companies for their last three financial years:—

	Year Ended.	1917-18. Trading Rev'ue.	1917-18. Net Profits.	1918-19. Trading Rev'ue.	1918-19. Net Profits.	1919-20. Trading Rev'ue.	1919-20. Net Profits.
		£	£	£	£	£	£
Argentine Land and Investment	June 30	97,958	72,282	87,167	59,692	135,594	98,844
Argentine Southern Land	June 30	131,819	50,635	144,919	54,025	204,770	94,134
Cordova Land	Sept. 30	104,596	36,794	156,828	61,520	214,565	125,887
Forestal Land, Timber, and Railways	Dec. 31	1,148,939	622,395	1,147,137	615,980	1,433,351	992,381
Leach's Argentine Estates	Mar. 31	367,870	278,355	353,516	262,069	282,870	171,959
Rio Negro	June 30	78,094	38,942	60,608	28,021	182,772	88,692
Tecka	June 30	77,985	46,6·2	85,529	33,671	130,614	57,703

Forestal Land, Timber, and Railways continues to make remarkable progress. From a profit, after making certain deductions for purposes of comparison, of £79,330 for the year 1906 to £842,380 for 1919 is a big jump, and the latest figures must give much satisfaction to those shareholders who have ardently supported this undertaking from the beginning. The total gross assets of this company are now £12,010,054, and the reserve stands at £1,007,641.

Leach's Argentine Estates, in its annual report, states "that climatic conditions throughout the sugar-growing districts were decidedly more favourable for the year 1919

than during the preceding year," and the total crop of the Republic yielded 280,000 tons of sugar. This company manufactured 21,000 tons of sugar, as compared with 18,045 tons in 1918, and 20,214 tons in 1917. The company's average cost of production showed some diminution compared with that of the previous year, but the report adds that, "as the total Argentine production of sugar was in excess of the quantity normally consumed in the Republic, the average price realised was appreciably less than that obtained during the year ended March 31, 1919."

In our next table we extract from the balance-sheets the most important items in liabilities and assets, and group them under the following headings :—

	Liabilities.			Assets.		
	Capital, Debentures, and Loans.	Reserves and Undivided Profits.	Creditors.	Land and Property.	Stocks, Produce, Stores, &c.	Investments & Cash in Hand.
	£	£	£	£	£	£

Argentine Southern Land	500,000	104,902	119,398	450,071	41,123	267,739
Cordova Land	1,494,872	157,462	65,234	1,559,881	..	112,144
Forestal Land, Timber, & Rlwys	6,955,985	3,127,495	1,926,570	4,662,429	2,125,872	3,710,662
Leach's Argentine Estates	1,865,780	838,921	314,208	1,895,136	885,925	237,842
Rio Negro Land	300,000	88,956	36,065	245,645	15,295	198,798
Tecka Argentina	200,000	110,462	17,510	194,883	19,592	113,496

Cordova Land includes cattle, horses, sheep, &c., in one item, together with land and property. Leach's Argentine Estates shows "Goodwill" at £132,700. But taking the balance-sheets as a whole, the items are satisfactorily set out, and shareholders have little to complain about.

In our next table we show how profits were allocated for the past year, and submit similar figures of a pre-war year for purposes of comparison :—

	1913-14.			1919-20.		
	Dividends, &c.	To Reserve, &c.	Carried Forward.	Dividends, &c.	To Reserve, &c.	Carried Forward.
	£	£	£	£	£	£
Argentine Land and Investment	15,717	25,000	+ 481	54,029	45,000	— 286
Argentine Southern Land	19,600	..	+ 13,775	38,000	50,000	+ 5,634
Cordova Land	43,935	..	+ 31,376	76,166	12,000	+ 17,382
Forestal Land, Timber, & Rlys.	356,661	..	+ 3,304	463,755	150,000	+ 183537
Leach's Argentine Estates	21,000	22,790	..	12[illegible],311	50,000	+ 1,647
Rio Negro Land	..	..	+ 6,094	45,000	40,000	+ 3,692
Tecka Argentina	..	1,000	+ 3,490	30,000	25,000	+ 2,073

The directors of Rio Negro and Tecka are to be congratulated on satisfactory performances. In all cases it may be said that distribution has been on a conservative scale, and substantial amounts have been added to reserves.

We conclude with a table showing dividends for the past three years, and a record of share prices :—

Name and Amount of Share.	Dividends.			Prices.			Present Yield.

* Free of income-tax.

Shares on the whole have benefited from the better results shown for 1919-20. There has been a fair amount of business done, and yields range between 7 5/16 to 15⅓ per cent. on current quotations.

According to the reports set out in annual accounts and speeches made at directors' meeting, signs of future prospects are not unfavourable, especially if the rate of exchange keeps round about its present position. Mr John Aungier, the chairman of the Cordova Land Co., at its recent general meeting, paid an interesting tribute to the wise rule of the President of Argentina, and amongst other general observations declared : "I believe property to be safe in the Argentine—safe to a perhaps almost unique extent in these days of insane and spendthrift Governments."

SOURCES OF OUR SUPPLIES OF WOOD AND TIMBER.

The timber most in use in this country is that of pines and firs. Baltic redwood (*Pinus sylvestris*) and white wood (*Abies excelsa*)—which we import from Russia, Sweden, and Norway—are the best known. Canada and the United States produce similar timber, viz., the white pine (*P. strobus*) and redwood (*P. resinosa*), Californian redwood (*Sequoia sempervirens*), Oregon pine, cedars, and spruce. Incidentally it may be mentioned that our so-called Scotch fir is no fir, but a pine. Australia yields many varieties of eucalyptus, and West Australia exports largely jarrah (*Eucalyptus marginata*), and karri (*E. diversicolor*) for sleepers and paving-blocks. Teak is exported from India, Siam, and Java. Greenheart (*Nectandra rodiei*), a heavy and very durable timber, is much used in harbour and dock-works for piling, as it resists the action of water and worms; it is obtained mainly from South America (chiefly Guiana), and a variety comes from the Guinea Coast of Africa. Cabinet woods are mainly obtained from tropical countries. Walnut is the chief cabinet wood of temperate climes, and is grown in Southern Europe and America. Mahogany is obtained from the coast and islands of Central America, and from West Africa. The hardest and most beautifully grained comes from the islands, and is called Spanish mahogany. Rosewood comes from Brazil and India. That there is no reasonable fear of a scarcity of timber (if the necessary means of collection and transport are provided) is evident from the fact that Siberia has nearly 2,200,000 square miles of forests which are barely touched; that Brazil has some 2,000,000 square miles of tropical forest; that Canada and the United States have 1,200,000 and 800,000 square miles respectively; and that European Russia has over 600,000 square miles of forest. It is not possible as yet to estimate what the forest area of the country bordering the Congo may prove to be worth, but its extent is enormous. Nevertheless, the preservation and scientific management of forests which are already being largely drawn upon has become as necessary as the immediate introduction of capital and skilled labour into the vast areas awaiting development.

The imports of wood and timber by the United Kingdom stand fourth in value in the order of her imports of raw material; cotton, wool, and the group classified under the heading of oilseeds, nuts, &c., alone exceeding them. The value of our imports of wood and timber rose from £33,789,000 in 1913 (two-fifths of which sum we paid to Russia) to £72,309,000 in 1919, an increase of £38,520,000, or 114 per cent. Needless to say, the quantities had very greatly diminished in volume. The price of mahogany rose from £8.63 in 1913 to £17.02 per ton in 1919; that of other furniture woods and veneers rose from £6.80 to £23.10 per ton; that of staves (*i.e.*, lengths of wood for making the sides of casks) rose from £5.50 to £16.07 per load; and the price of pitprops and pitwood rose from £1.29 to £5.04 per ton in the same period. The comparative values and quantities of our imports of timber and wood before the war are shown in the following table :—

000's omitted.	Hewn Timber (in Loads)					Sawn Timber (Loads).			Furniture Woods and Veneers.	
	Pit Props	Oak.	Fir.	Teak.	Other	Fir.	Other	Stav's	Mahogany.	Other
Value in £,000's	4,445	1,736	1,399	879	389	20,181	854	1,000	1,226	1,685
Quantities in loads and tons	3,451	254	529	48	98	6,451	186	182	Tons. 142	Tons. 249

Our imports of fir were valued at £21,580,000 (sawn fir, £20,181,000 and hewn fir, £1,399,000), or nearly two-thirds of the total value of our imports of timber. The value of pit props and pit wood stood second to that of fir, oak standing third in order, and furniture woods (other than mahogany) and veneers (thin sections of fancy woods for overlaying furniture) coming fourth in value. The sources of our supply of fir are shown in the next table, which is based on annual figures given on

pp. 72, 75 of the Dominions Royal Commission Memorandum [Cd. 8, 123], 1915 :—

In Thousand Loads.	Hewn Fir.					Fir, Sawn or Split, Planed or Dressed.				
Imported from—	Russia.	Norway and Sweden.	United States.	Canada.	Total Imports.	Russia.	Norway and Sweden.	United States.	Canada.	Total Imports.
Average 1904-1908..	272	71	34	27	517	2,148	1,965	449	1,137.	5,855
„ 1909-1913..	351	53	33	16	542	2,823	1,515	402	933	5,763
Inc. or dec. in latter period....	+ 79	— 18	— 1	— 11	+ 25	+675	—450	— 47	—204	— 92
Per cent.	29	25·3	..	40·7	4·8	31·4	23·0	10·5	18·0	1·6

The average annual quantity of hewn fir imported rose by 25,000 loads in the latter period above that imported in the earlier five years, and the average annual amount of sawn fir fell by 92,000 loads below that imported from 1904 to 1908, nevertheless the amount of sawn fir imported was ten times as great as that of hewn fir imported on the average from 1909 to 1913. Russia stood easily first in the list of countries whence we obtained our supplies of fir, both hewn and sawn or split. The percentage increase in both classes being nearly equal, viz., 29 per cent. in the case of hewn fir, and 31.4 per cent. in that of sawn fir. But, whereas our imports from Russia steadily rose during the years 1909 to 1913, those from our other three chief sources of supply fell, both in the amount of hewn fir and of sawn fir imported. The greatest percentage fall in the case of hewn fir was that which we obtained from Canada (viz., 40.7 per cent.), and of sawn fir that which we got from Norway and Sweden. We see a striking instance of our need of Russian produce in the case of our most necessary import of timber. The next table shows the chief sources of our supply of pit props and pitwood, and of staves :—

Thousand Loads.	Pit Props.					Staves.				
Imported from—	Russia.	France.	Norway and Sweden.	Portugal.	Total Imports.	Russia.	Norway and Sweden.	United States.	Canada.	Total Imports.
Average 1904-1908	735	771	675	248	2,515	53	56	23	2	142

Inc. or dec. in latter period....	+526	+ 49	—229	+ 63	+429	+ 22	— 6	+ 5	— 1	+ 19
Per cent.	71·6	6·3	34·0	25·4	17·1	41·5	10·7	21·7	50	13·5

Our import of pit props from Russia rose in the latter period by more than half-a-million loads, or 71.6 per cent., over the average import of the previous period. Our imports of staves from Russia rose in the average annual quantity imported by 41.5 per cent., thus placing Russia again in a predominating position as our chief source of supply of both pit props and staves. Our supply of pit props from Sweden and Norway fell by 34 per cent., and our supply of staves from the same countries and from Canada also diminished.

Thousand Loads.	Hewn Oak.				Hewn Timber, Other than Fir, Oak, and Teak.				
Imported from—	Russia.	United States.	Cnada.	Total Imports.	Russia.	Canada.	United States.	Sweden.	Total Imports.
Average 1904-1908	21	103	9	186	13	17	15	2	54
„ 1909-1913	21	146	8	202	28	16	11	5	66

The Company offers the services of its organization to manufacturers and others desirous of establishing new connections in the East and elsewhere.

imports during that period of this class of timber. British India remains our chief source of supply of teak.

Coming to our imports of mahogany and other furniture woods and veneers, our supplies from Russia were comparatively unimportant :—

Imports of Mahogany, in Thousand Tons.

Imported from—	British West Africa	French West Africa	British Honduras	Cuba.	Mexico.	Total Imports.
Average, 1904 to 1908	45	16	16	9	6	102
„ 1909 to 1913	35	30	11	10	4	106
Inc. or dec. in latter period	— 10	+ 14	— 5	+ 1	— 2	+ 4
Per cent.	22·2	87·5	32·8	11·1	33·3	4·0

Our supplies of mahogany from 1909 to 1913 from British West Africa, although showing an average annual import of 10,000 tons less than in the earlier period, were still greater than our supplies from French West Africa, although the latter had nearly doubled in quantity. A final table shows our chief sources of supply of other furniture and hard woods and veneers. Smaller quantities were obtained from British Honduras, Ceylon, India, Cuba, French West Africa, Hayti, and San Domingo. (See Dominions Royal Commission Memorandum, p. 77.)

Thousand Tons, from—	Australia.	Canada.	British Guiana.	British West Indies.	Total from British Possess'ns.	United States.	Russia.	Dutch West Indies.	Total Imports.
Average 1904-1908	64	8	4	3	83	95	2	2	196
„ 1909-1913	40	12	5	2	65	105	6	3	194

Per cent.....	37·5	50·0	25·0	50·0	21·7	10·5	200	50	1·0

Whilst our total imports from British Possessions fell by 21.7 per cent., the total imports from foreign countries rose by 14.2 per cent. The chief source of supply was the United States, Australia standing second, and Canada third.

Our total imports of hewn and sawn timber from Russia rose from an average of 3,277,000 loads during 1904-1908 to an average of 4,583,000 loads during 1909-1913, showing an increase of 1,306,000 loads, or 40 per cent., and in 1913 the value of our imports of Russian wood and timber exceeded £13,000,000.

Business Notes.

Shipping and Munitions Ministries.—A memorandum on the cost, work, and staff of the Ministry of Shipping and the Ministry of Munitions was issued this week as a White Paper (Cmd. 1,055, price 2d). The 1920-21 estimate of gross expenditure and receipts of the Ministry of Shipping were £21,519,000 and £21,985,000 respectively, but we are told in a footnote to the White Paper that the actual expenditure and receipts will exceed these estimates, and a reduction of approximately £10,000,000 in the net provision for the year is anticipated. The staff of the Ministry has been reduced from 2,784 in April, 1919, to 1,068 in November, 1920. Gross expenditure of the Ministry of Munitions for 1920-21 is placed at £31,300,000, and gross receipts at £212,297,000, of which £120,000,000 is attributed to "Disposal Board receipts," £50,000,000 to "net Exchequer receipts from raw materials," and £30,000,000 from "sale of munitions

stores to Dominions and Allies." A reduction in the Ministry's headquarters staff has taken place, from 5,854 on April 1, 1920, to 3,067 on November 13th.

Agricultural Conditions.—The monthly agricultural report of the Ministry of Agriculture states that November was a very favourable month for work on the land, and good progress was made with autumn cultivation and sowing in all parts of the country. Field work generally is now well forward, though in some districts, where the completion of the harvest was much delayed, all the arrears have not yet been overtaken, and autumn sowing was late. Much cleaning of the land has been done, and the soil has been in good condition for cultivation as a rule, though some heavy soils in the western counties have worked rather stiffly, and in the east a good tilth could not be obtained in some cases on heavy land as it was too hard and dry. On the whole, however, autumn corn has been drilled into a good seed-bed. Potatoes have been lifted under very favourable conditions, and have been stored clean and dry. The tubers are, however, small on the whole, and of very variable quality, there being a good deal of disease in many districts, especially in the south-west and in Wales. The yield per acre over the whole country is estimated at 5 4-5 tons per acre, or two-fifths of a ton under the ten-year average, but the total crop, owing to the increased area, is estimated at 3,137,000 tons, or 400,000 tons more than last year. The keeping qualities of this year's crop are, however, not expected to prove so good as last year's, when potatoes were exceptionally free from disease. In many districts all the mangolds have been clamped, and nowhere is there any large quantity still in the fields. The yield is estimated at 19 tons per acre, which is equal to the average of the last ten years. The total production, 7,292,000 tons, is 1,000,000 tons greater than in 1919. Turnip pulling was in progress in all parts of the country at the end of November, and in some districts was well advanced. Both turnips and swedes are of good quality as a rule, and they also improved considerably towards the end of the season, and gave a much better crop than was anticipated during the summer. The yield is estimated at 14 2-5 tons per acre, or 1 4-5 tons above average, and the total production at 14,200,000 tons, or 3,000,000 tons more than last year. The mild, dry weather has allowed cattle to be left out in the fields longer than usual, and as there is still quite a good supply of grass they have made very good progress. The dry weather has especially favoured sheep, which are doing very well. Little winter keep has been used as yet, and there are practically no districts in which the supplies of winter keep are not considered ample for probable requirements. Though in many districts there is still some shortage of skilled men, the supply of labour is adequate in practically all districts, and as work is generally well advanced, more men seem to be unemployed than last month. At the Martinmas hirings in the north the number of men seeking engagements exceeded the demand and a number were left unemployed.

Cotton Supplies.—This week the Census Bureau of the United States Government has published its sixth report on the cotton ginned this season, the amount given being 10,145,000 bales, against 8,844,000 bales last year and 9,571,000 bales in 1918. The figures were much as expected. On Monday the Government will issue its estimate of the growth for the season 1920-21, and according to private forecasts the report will probably indicate a total yield of about 13,500,000 bales, as compared with 12,218,000 bales last year. With regard to Egyptian cotton, the feature of interest this week has been the decision of the Government to reduce the acreage for next season by one-third. The area under cultivation for this year was a record, being 1,827,888 feddans. On such a large acreage the output will probably be poor, as official estimates of the crop centre round 6,000,000 cantars.

Cotton Spinning Dividends.—Mr F. W. Tattersall's analysis of the reports of Lancashire cotton spinning companies for the 12 months ended November 30, 1920, shows that record dividends have been paid, the average dividend paid by 100 companies being 29.47 per cent. on share capital, absorbing £2,263,899, while 13 companies during the year have made bonus calls amounting to £241,927 out of profits. The average dividend for 1919 was 21 per cent., and previous to that year the most prosperous period was 1907, when the average dividend was nearly 16 per cent. The 100 mills dealt with contain 3,021,034 mule spindles, 1,190,812 ring spindles, and 5,813,910 weft spindles.

Cotton Trade Short Time. — Our Manchester correspondent writes:—As anticipated, spinners of American cotton throughout Lancashire have decided to curtail production by 50 per cent. until further notice, and this week the mills have only worked 24 hours instead of the usual 48. The short-time policy is being carried out by closing down the factories on Monday, Tuesday, and Saturday each week, and only running eight hours a day on Wednesday, Thursday, and Friday each week. The result of the ballot of the Masters' Federation on this question showed that the owners of 82 per cent. of the spindles in this section were favourable to the proposal, 7 per cent. against, and no replies were received from 11 per cent. According to the bye-laws of the federation, organised restriction of output cannot be put into operation unless the owners of 80 per cent. of the spindles are in favour. This decision is a serious matter for the operatives, who for the present will only earn half wages. There has been considerable congestion this week at the Oldham Labour Exchange, and arrangements are being made for unemployment payments to be made at the mills where the operatives work. Since October 23rd, spinners using Egyptian cotton have only worked 35 hours a week instead of 48, and this week it has been decided to continue curtailment of production, at any rate, up to the middle of January.

Manchester Merchants and Indian Exchange.—At the end of last week there was a special meeting at the Manchester Chamber of Commerce of firms engaged in trade with India for the purpose of considering the present financial situation which has arisen through the fall in the value of the rupee. It may be pointed out, writes our Manchester correspondent, that, owing to the unfavourable condition of exchange between this country and India, many native dealers abroad are refusing to send remittances for goods bought. The meeting at the Chamber of Commerce was presided over by Mr Edward Rhodes, the chairman of the India section, and he pointed out that the executive committee had held frequent meetings with a view to watching closely the various developments and taking whatever action possible to protect the interest of members. In his opinion, the crux of the matter was the bad state of the export trade of the Indian Empire. Leading bank managers ascribed most of the difficulty to this cause. In the discussion which followed, no helpful suggestions were made, and it was not felt desirable to take any further steps at the moment beyond writing to the Government and other authorities explaining that the meeting had been held, and giving expression to the general feeling.

British Overseas Banks Association.—At the annual general meeting of the members of the British Overseas Banks Association, the following were elected to serve on the committee for the ensuing year:—Mr Percy Arnold, O.B.E., Bank of Adelaide; Mr Charles Cambie, Canadian Bank of Commerce; Mr Leslie Couper, C.M.G., Bank of British West Africa; Mr Chas. H. Hewett, Colonial Bank; Mr Robt. J. Hose, Anglo-South American Bank; Mr Alexander Kay, Bank of New Zealand; Mr William E. Preston, Chartered Bank of India, Australia, and China; Mr Sydney F. Rogers, Imperial Bank of Persia; Mr Francis Shipton, Standard Bank of South Africa; and Mr George H. Soul, Anglo-Egyptian Bank. Mr Charles Cambie, of the Canadian Bank of Commerce, has been appointed chairman of the committee, and Mr Francis Shipton, of the Standard Bank of South Africa, has been reappointed hon. secretary and treasurer.

THE FULL range of import and export trading operations is covered by the Irving's specialized Over-seas service departments. These include Foreign Trade, with its counsel on markets and other buying and selling problems, Foreign Exchange, Credits, Collections, Securities and Commercial—the latter co-operating with the over-seas merchant or manufacturer in any situation which demands special attention to the entry, warehousing, insurance, delivery or the final settlement for his merchandise.

IRVING NATIONAL BANK

WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

Pilferage.—A letter addressed by the Pilferage Committee of the London Chamber of Commerce to H.M. Secretary of State for Home Affairs, dated December 1, 1920, calls attention to a very serious state of affairs. It cites statements by members of the Committee as follows:—

(1) A shipowner produced figures showing that claims for pilferage, which amounted in 1913 to 1.44d per ton of cargo in June last, had risen to 26.91d per ton, an increase of nearly 2,000 per cent. Later figures show a still continuing increase.

(2) Another shipowner stated that careful estimates recently taken showed that his company was paying claims for pilferage and non-delivery at the rate of about £250,000 per annum.

(3) A leading underwriter stated that, whereas before the war pilferage was negligible, and was rarely insured, it is now a serious item in insurance. Because the extra premiums now charged are proving quite inadequate to meet the enormous claims arising, rates of premium are being increased, and it is obvious that the burden falls on the consumer.

The Committee recognises that "the present appalling state of affairs is mainly, if not entirely, an outcome of the war," but feels very strongly that unless steps are taken to stop these thefts not only will the moral fibre of the nation become seriously undermined, but the commercial reputation of this country will be seriously injured and the business community, whether manufacturers, carriers, dock authorities, or merchants, will find their business passing into the hands of other nations, and unemployment will be enormously extended. It infers that robberies on so gigantic a scale cannot be the result merely of petty individual thefts, but are in many cases the work of well-organised gangs of thieves and receivers who can only be discovered and brought to justice by an equally well-organised body of specially selected detectives.

Cheques Given for Bets.—A legal correspondent writes:—The decision of the Court of Appeal in the case of Dey *v.* Mayo is important to the sporting public and their bankers. A makes a bet with B and loses £x, which he pays to B by cheque, payable to B or order. B indorses it in blank and pays it into his account; his bankers collect it through the clearing-house; it is duly honoured. The Court decided that A can then sue B for £x, under Section 2 of the Gaming Act, 1835, and thus recover whatever he has paid, although if the payment to B had been made in cash nothing could have been recovered. The decision was the logical sequel to two somewhat similar decisions of recent date given by the High Court, but nevertheless caused considerable surprise. As a result, bookmakers all over the country are being sued for the recovery of money paid to them by cheque. Tattersall's Committee would probably interfere to prevent any reputable bookmaker trying to recover his losses in a similar manner. The position is highly unsatisfactory, and will remain so until either the House of Lords overrule the decision or the Legislature steps in. Meantime, however, there appears to be a method of avoiding the difficulty in respect of future business. The section only applies to notes, bills, or mortgages, and only where the drawer pays to any indorsee, holder, or assignee. According to the Court, "holder" includes everyone lawfully in possession of the security, except the payee or someone who, *to the knowledge of the drawer,* is the payee's agent for collection only. Payment in cash is outside the Act, but if adopted by losers calling at the bookmaker's office, might result in a prosecution under the Betting Houses Act, 1853, and is therefore impracticable. A safer course appears to be as follows:—If the cheque is an open one, the payee can present it himself at the drawer's bank and obtain cash; if a crossed one, the payee must notify the drawer, before paying it in, that his (the payee's) banker will collect it merely as his agent, and in no other capacity.

A Library of International Law.—In memory of the late Sir Edward Fry, the first delegate of Great Britain at the second Hague Conference, a Library of International Law is to be established at the London School of Economics. Trustees have purchased from Mrs Oppenheim the library of about 1,200 volumes of her husband, the late Professor Oppenheim, the well-known Whewell Professor of International Law at Cambridge. These, with some works of special personal interest belonging to the late Sir Edward Fry, will, in conjunction with the large number on the subject already in the library of the London School of Economics, form the nucleus of an international law library worthy of this country. The library will be available for reference to any student of the subject. As soon as funds allow, a catalogue of the books will be printed. Donations of books, pamphlets, and periodicals on any aspect of international law, as well as sums of money towards the maintenance of the library, will be very cordially welcomed by the trustees, and should be sent to their secretary, Mr B. M. Headicar, Librarian of the London School of Economics, Clare Market, W.C. 2, who will be glad to give information and assistance to students.

Economic Conditions in Bulgaria.—The Department of Overseas Trade furnishes the following information from a series of articles in the *Echo de Bulgarie* by the secretary of the Varna Chamber of Commerce. The area of cultivated lands in 1917 was 14.8 per cent. less than that in 1912, and the land sown and planted in 1917 was 72 per cent. of the cultivated area. In 1918, 29,299,109 decares (decare equals .247 acre) were sown and planted, which is 426,519 decares over the 1917 figure. Of this total, the following are the outstanding items:—

Cotton.....	15,738	decares,	as against	8,594	in 1917
Tobacco	218,194	„	„	166,401	„
Rice	55,170	„	„	44,394	„

Owing to bad seasons in 1918, despite the increase in cultivated areas, the crop was only 1,304,621,978 kgs, or 665,123,251 kgs less than the previous year, which resulted in a bread crisis, and food had to be imported from Bessarabia and the Ukraine. This was the condition existing at the time of the armistice. In 1919 the area sown with cereals was 20,086,407 decares, as against 22,807,945.7. Owing to the return of the demobilised armies, a favourable season, and better methods the production reached a total of 2,527,613,317 kgs, resulting in an increase of 1,222,991,339 over the year 1918. The chief items were as follows :—

	Production 1919. Kilogs.	Per Decare. Kilogs.	Production 1918. Kilogs.	Per Decare. Kilogs.
Wheat.....	926,111,804	.. 110	659,280,002	.. 69.1
Barley	190,135,824	.. 123.5	135,730,111	.. 60.7
Maize	985,296,104	.. 174.8	170,478,679	.. 31.5

The harvest in general in 1919 gave a return nearly double that of 1918, being about one and a-half times greater for wheat and barley and six times greater for maize. This harvest may be considered one of the best during the last 15 years; that of maize being the best for 15 years, the figures for 1910, 1911, 1912, and 1916 being 2,876,304,900, 2,688,127,900, 2,672,038,500, and 2,530,353,900 kgs respectively. The areas of autumn sowings in 1919 for wheat, rye, maslin, barley, and oats were 11,095,287.8 decares, as against 12,344,264.5 in 1918. Incessant rains prevented the larger area of 1918 being sown, but the area sown in the spring of 1920 was from 15 to 20 per cent. greater than the previous year.

Liquidation.—A Stock Exchange correspondent writes:—Plain statement of the causes which underlie the root of the trouble responsible for the Stock Exchange liquidation of the past few weeks may serve to make clear to the ordinary investor some of the reasons which have caused so severe a shrinkage in the price of his stocks. The main reasons for the flatness—*e.g.*, the Government extravagance, the disturbance of foreign exchanges, the tightness of money, and the nervousness engendered by the Irish chaos—are well known; but what may be called the more domestic difficulties of the City continue to be adroitly wrapped up in hints and indirect allusions, and in vague statements which mystify the man and woman standing at a little distance from the inner ring of City circles. To put the matter bluntly, several groups of financiers, designating themselves under various titles, have been undertaking during the past 12 months ambitious schemes and large financial operations in a manner which aroused anxiety in the minds of the more conservative observer, whose counsels of caution were generally disregarded and ignored. The inflation of prices and of credit enabled the various groups to embark upon operations of far-reaching consequence, and involving enormous amounts of capital, which the public, as a rule, subscribed with a fair amount of readiness. The difficulty of financing commitments, not only in stocks and shares, but also in commodities, became more pressing in the spring, and the remarkable deflation, which started in America, even before it began on this side, brought about a wholesale drop in values. People who had been thinking in millions where they would more safely have been engaged in considering thousands, have loaded themselves with quantities of more or less unsaleable stock, for which they have been compelled to try to find buyers in consequence of the steady pressure of the banks in calling in loans upon securities and commodities alike. The rickety structure which was built up on the basis of inflated credit has already shown signs of breaking. Stocks and shares which can be sold are being flung overboard with all the haste that their holders can command; that is to say, as quickly as market conditions will permit. It is not a question of value. The sellers, hard driven to find ready capital with which to meet engagements incurred in various directions, throw out whatever they have in their boxes that is realisable, and this process goes on throughout every market in the Stock Exchange. When, or what, the end of it will be it is impossible to foretell, but until the struggles of the amateur financiers are ended by one means or another, it is not too much to say that to look for real improvement in Stock Exchange markets seems to be hopeless.

Greek Politics and Greek Loans.—The bond issues of the Hellenic kingdom now stand at their lowest within the last eleven years—lower even than during the Balkan War of 1912. Their fall is natural, but it is easy to exaggerate the effect of political events on their yield. On the loans comprised in the arrangement of 1897-98 the recent payments of interest and plus-values have been the highest on record, and it is only the plus-values that can be affected by the political change. The assigned revenues come from (1) the monopolies, (2) the stamp duties and tobacco tax, (3) the Piræus Customs duties, and, if neecssary, those of certain other ports. The yield of the monopolies is not likely to be affected; Allied disfavour will not interfere with card-playing or the consumption of petroleum, salt, or tobacco. The stamp duties and the tobacco tax have been so reformed under M. Venizelos as to increase their yield, and though his "severe taxation" is said to have been one factor in his downfall, we can hardly suppose that these will be selected for alteration. The Piræus Customs revenue is not drawn upon for the plus-values. The loans since 1898 are secured mostly on the surplus of the assigned revenues, and on other revenues besides. The chief danger for the bondholders is in the exchange. A year ago it was at par or above it; now it has fallen to 49 drachmas to the pound sterling, in consequence of M. Rhallis's issue of 200 million drachmas of new currency—a violation, however, of the agreement with the Protecting Powers in 1897—and also of the threatened cessation of Allied advances, which, besides complicating the situation in Asia Minor, will check British and French and aid German trade.

Peruvian Corporation.—Although the net revenue received from the railways and steamers owned by the Peruvian Corporation for the year ended June 30th last shows a satisfactory increase, the amount falls short of the total touched in the record year 1917-18. Other receipts, however, were on a larger scale, and the total income at £599,800 is £1,800 higher than 1917-18 and £86,000 higher than in 1918-19. Administration expenses, however, were higher than two years ago, and the revenue balance is in consequence over £5,000 lower. The summary below compares revenue and appropriation for the past five years :—

	Year to June 30.				
	1915-16.	1916-17.	1917-18.	1918-19.	1919-20
	£	£	£	£	£

Carried forward	183,407	149,521	161,979	142,198	146,927

* 1 per cent.

The sum of £115,000 received from the Government represents one year's annuity of £80,000 and £35,000 in payment of arrears, exclusive of interest. The revenue account also shows receipts from the Government of Peru in respect of old claims in connection with the Central Railway amounting to £15,600, while "interest, exchange, and miscellaneous" brought in £34,600 as against £30,500 a year ago. A sum of £20,650 is written

off for depreciation of investments and £4,000 goes to steamers' insurance account, while income-tax absorbs £68,300 as against £44,300 for the previous year. The additional 2 per cent. interest on the debenture bonds requires £108,000, and the preference dividend is increased from 1 to 1¼ per cent., leaving £94⅜ per cent. in arrears. After making these payments the balance forward is increased by £4,700. Changes in the principal items of the balance-sheet since 1912 are as follows :—

June 30.	Liabilities.			Assets.		
	Debentures.	Creditors and Bills.	Sinking Fund, Reserve, Insur'nce and Net Revenue.	Concessions, &c.	Railways.	Investments, Bills, and Cash.
	£	£	£	£	£	£
1912	5,236,750	67,228	1,159,121	12,772,305	9,682,939	259,155
1913	5,176,000	71,769	1,253,291	12,772,305	9,700,667	258,741
1914	5,111,750	130,829	1,370,807	12,772,305	9,741,496	322,001
1915	5,043,850	101,634	1,331,057	12,772,305	9,674,848	286,810
1916	4,975,450	84,651	1,440,396	12,772,305	9,568,853	400,943
1917	4,903,800	89,112	1,596,049	12,772,305	9,526,033	540,631
1918	4,824,050	125,153	1,734,037	12,772,305	9,506,566	579,520
1919	4,739,700	120,001	1,770,044	12,772,305	9,506,566	566,685
1920	4,650,550	137,436	1,899,811	12,772,305	9,506,566	383,273

The operations in land resulted in a profit of £7,900 as against £800 in the previous year. The guano question has not yet been settled. Negotiations with the Government in respect of the admitted balance of 762,872 tons of guano still due to the corporation have ended in an agreement being arrived at, subject to confirmation by Congress, whereby the corporation cedes its right to extract and export the 762,872 tons of guano in return for a payment of £3,051,488, such sum to be paid quarterly at the rate of £80,000 per annum commencing from the date of passing the necessary legislation. This Bill is now being considered by Congress, and is expected to become law before the end of 1920. Should the Bill not be passed by Congress this session, the Government has undertaken to "reinstate in adequate form the regular exportation of guano by the corporation during the guano open season of next year and subsequent years."

British Overseas Bank.—The report and accounts of the British Overseas Bank, Limited, have just been issued, "for the period ending October 31, 1920." Profits for this undisclosed period, after providing for doubtful accounts, amount to £199,744. Out of this sum it is proposed to pay a dividend of 6 per cent. on the "A" ordinary shares. This will absorb £69,242. To establish a reserve fund against investments in foreign countries £10,000 has been allocated. The whole of the preliminary expenses, including underwriting commission at £15,000, the total amounting to £39,016, has been written off, and £81,487 is carried forward, subject to income and corporation profits taxes. This must be regarded as a very satisfactory performance. Total assets are given as £5,220,792; and here again, after making allowance for the possibility of a certain amount of "window dressing," shareholders, directors and managers are to be congratulated upon the liquid nature of the assets. "Money at call and short notice" amounts to £2,025,499, while "cash in hand and at bankers" totals £695,710. The acceptance business appears to be developing favourably. "Balance with bankers abroad" is, of course, a fluctuating item, but at £318,125 appear to be somewhat low, while "Investments in foreign countries at cost" is surprisingly small at £32,443.

Ind, Coope's Profits.—The accounts of Ind, Coope, and Co. (1912), Limited, provide an excellent example of the prosperity enjoyed during the war by brewery companies whose finances were not in too brilliant a condition before. The war found this company engaged in a stiff struggle for recovery, following on a drastic reconstruction in 1912. Thereafter growing profits enabled a resumption of dividends, 5 per cent. being distributed in respect of 1916-17. In respect of the year just concluded the ordinary shareholders receive a dividend of 15 per cent. and a bonus of 10 per cent., both less tax. The improvement of recent years is shown by the following table :—

Year Ended Sept. 30th.	Gross Profits.	Interest on Debenture Stocks and Mortgages.	Depreciation.	Ordinary Dividend.	To Reserve, &c.	Carried Forw'rd.
	£	£	£	£	£	£
1914..	110,821	58,332	28,516	..	..	14,290
1915..	146,238	54,300	34,375	..	40,000	680
1916..	152,906	53,625	36,084	..	50,000	2,484
1917.	204,717	58,186	34,186	14,026	50,000	23,277
1918..	392,575	55,686	29,991	20,671	185,000	57,281
1919..	474,202	55,722	39,373	49,594	285,000	103,872
1920..	415,249	53,914	45,863	91,341	85,000	139,613

After providing for debenture interest, general expenses, reserve and depreciation, there remained a balance of £127,082, which, with £103,871 brought forward, makes a total of £230,954, of which the interim dividend of 7½ per cent. paid in May absorbed £24,797, leaving £206,157 to be dealt with. Of this sum the directors set aside £36,537 for distribution by way of bonus on the following terms :—(a) In respect of each ordinary share existing on March 1, 1920, 10 per cent.; (b) in respect of every new ordinary share allotted in pursuance of the allotment letter of March 15, 1920, at the rate of 10 per cent. per annum as from the dates for payment of the calls thereon apart from the premium. The bonus and final dividend of 7½ per cent. between them absorb £66,544, and £139,613 is carried forward. Changes in the balance-sheet position are analysed in a later column of this issue.

The Inter-Allied Trade Company.—Yesterday's *Times* announced that the Inter-Allied Trade and Banking Corporation, with an issued and fully-paid capital of £610,876, is to be wound up, its liabilities and certain of the assets being taken over by Messrs H. and W. Greer, Limited. Formed two years ago at a time when great opportunities for trade and finance openings were believed to lie before enterprise, it has, like other new ventures then formed, suffered from the disappointment of these hopes. Shareholders will become preference shareholders in Messrs H. and W. Greer to the extent of one preference share for every two shares held. The general public does not appear to be concerned.

A PAPER on the Stabilisation of the Imperial Exchanges will be read by Mr J. F. Darling before the Institute of Bankers on December 21st, at 5.30 p.m., in the theatre of the School of Oriental Studies, Finsbury circus, E.C. Applications for tickets should be addressed to the secretary of the Institute, 34 Clements lane, E.C. 4.

AN appeal has been issued for the Taylorian Extension Fund to support the Taylor Institution and its activities in the furthering of the study of modern languages at Oxford University. Bankers, Messrs Barclay and Co., the Old Bank, High street, Oxford. Cheques should be made payable to the fund. Information will be supplied by Professor Joseph Wright, Taylor Institution, Oxford.

THE Royal Colonial Institute announces that papers on "India and England: The True Tie Between Them," will be read by Sir Francis Younghusband, K.C.S.I., K.C.I.E., at 8.30 p.m., on December 14th, and on "The Revival of the West Indies," by Sir Edward Davson, on December 21st, at 4 p.m. Both meetings will be held at the Edward VII. Rooms, Hotel Victoria, W.C. 2.

THE first meeting of the City and County of London Committee of the British League of Help (postponed from November 23rd owing to Lord Derby's illness) will be held at the Mansion House on Monday, December 13th, at 2.30 p.m. The Lord Mayor will preside, and will be supported by the Mayors of Westminster, Kensington, Wandsworth, &c. The principal speakers will be Lord Derby, Lord Burnham, the Right Hon. Reginald McKenna, Mr. Stanley Machin (president of the London Chamber of Commerce), Mr Sidney Boulton (chairman of Lloyd's), &c.

THE MATURING DEBT.—At the meeting of the Royal Statistical Society, on the 14th instant, Sir Drummond Drummond Fraser will read a paper on this subject. The meeting will be held at the society's rooms, 9 Adelphi terrace, at 5.15 p.m.

UNITED STATES. — FOREIGN TRADE IN OCTOBER—CONTROL OF GENERAL MOTORS CORPORATION IS SOLD — BANKING POSITION STRONGER—MONEY RELAXING—DENVER AND RIO GRANDE ACQUIRED AT AUCTION BY WESTERN PACIFIC RAILROAD.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 26.

FOREIGN trade figures for October, published by the Government to-day, present some rather striking features. The month's exports, for instance, totalling $752,000,000, show an increase of $146,000,000 over the aggregate for September, and are the largest of any month since last March. The reason is found chiefly in our heavy shipments of cotton and grain. Exports of cotton alone in October were $50,000,000 greater than in September, while wheat exports increased $10,000,000, and those of wheat flour $7,000,000. Coal exports last month established a new high record of more than 4,500,000 tons. On the other hand, imports for the month, amounting to $362,000,000, represent a decrease of $1,000,000 from September's total, and compare with the high record of $553,000,000 reached last June. The falling off in imports is attributed to the world-wide decline in commodity prices, and partly to the fact that October is a dull period of the year for sugar imports. It is especially noteworthy that the month's excess of exports, namely, $430,000,000, is the largest recorded since June, 1919, and accounts in large measure for this autumn's weakness in foreign exchanges. Gold exports in October amounted to $26,000,000, as against $17,229,000 in September and $44,148,000 approximately in October of last year. Imports of the precious metal last month reached $117,000,000, compared with $39,242,000 in September, and about $5,000,000 in October, 1919. The unusually heavy imports of gold last month were due partly to the return of gold, which had been held abroad for the account of Federal Reserve Banks, and partly to shipments to this side in connection with the Anglo-French loan maturity.

An event which attracted much attention this week in financial and stock market circles, and also in the automobile industry, was the passing of control of the General Motors Corporation to the Du Pont-Morgan interests. The Du Pont Securities Corporation, recently organised by Pierre S. Du Pont and associates, took over approximately 3,000,000 shares of that corporation's common stock from its president, William C. Durant. J. P. Morgan and Co. were the bankers in the transaction, the consummation of which gives Mr Du Pont and the Morgan interests more than 51 per cent. of the outstanding General Motors shares, and consequently control of the company. The deal is not expected to interfere with the British interest in the corporation, which was acquired shortly after the recent increase in the capital stock. At that time about 3,219,000 shares of new stock were issued, of which, it is understood, Morgan and Co. underwrote some 1,419,000 shares, and British interests took 1,800,000 shares. The amount of money involved in the transaction—probably the largest of its kind in the history of the automobile industry—is not stated; payment was made partly in cash and partly in the shares of the Du Pont Securities Corporation. At the market's closing price for General Motors last Monday, when the negotiations were completed, the 3,000,000 shares were worth $47,250,000. The corporation's subsidiaries include some of the best-known automobile manufacturers, such as the producers of Buick, Cadillac, Chevrolet, Oakland, Oldsmobile, and Scripps-Booth cars. The passing of control to the Du Pont-Morgan group is generally regarded as a move to place the General Motors Corporation in the same position with respect to the automobile industry that the United States Steel Corporation occupies in the steel industry. Comment in the financial district is to the effect that those who now dominate General Motors have for some time past been seeking control of a company sufficiently powerful to stabilise the automobile business, just as the Steel Corporation has been able to do in the iron and steel trade.

It is seldom that a big railroad system is offered for sale at public auction, but that is what happened last Saturday in Denver, Colorado, when all the property and holdings of the Denver and Rio Grande Railroad were sold to three representatives of the Western Pacific Railroad Company for $5,000,000—the minimum price fixed by the Court. That was the only bid. The Western Pacific was created by the Denver and Rio Grande. Thus, as one correspondent describes the event, "from a dusty box in the general freight room of the Rio Grande, the Master in Chancery 'knocked down' the parent road to the child that it brought into existence 15 years ago." The road was sold to satisfy a judgment for $36,000,000 obtained by the Equitable Trust Company, of New York, as trustee for holders of bonds issued by the Western Pacific and guaranteed by the Denver and Rio Grande, the sale having been ordered by the United States Circuit Court of Appeals after prolonged litigation. It is understood that a new corporation will take over and operate the road, the name being changed to the Denver and Rio Grande Western, and it is stated that $12,000,000 will be expended for improvements and new equipment. Under the reorganisation, it is reported, about $49,000,000 preferred stock and $38,000,000 common stock of the Denver and Rio Grande will be wiped out; a substantial amount of the stock is said to be held in Europe, principally by Amsterdam interests. The Denver and Rio Grande, which was founded by General William J. Palmer in 1871, had a stormy career. From 1883, when the Jay Gould interests forced the retirement of General Palmer, control of the railroad was repeatedly sought by rival financial groups, until the receivership resulted from the company's default in payment of Western Pacific bonds in 1918. Whether or not the sale of the property is the final chapter in the road's history is not yet certain. Its bonded debt, amounting to $121,175,500, is protected, and must be assumed by the purchaser. But the auction sale has to be confirmed by the Court, and the stockholders' protective committee have announced their intention of instituting proceedings in the United States District Court for the southern district of New York to have the judgment, on which the sale was based, vacated.

The general banking position, as disclosed in last Saturday's statements, has shown further improvement. Outstanding features of the report for the entire Federal Reserve System were the reduction of $124,000,000 in holdings of discounted and purchased paper, and of $21,000,000 in note circulation, while the reserve ratio increased from 43.6 to 44.1 per cent.—the highest percentage reported since July 30th. Continued liquidation was shown for all kinds of paper held by the Federal Reserve banks. Another favourable development in the situation is falling off in borrowings between banks in the central reserve cities, indicating a lessening of the strain to which they have been subjected during the autumn as a result of crop-moving and other demands. In other

words, the money and credit stringency is believed to have been passed. Owing to this improvement and to the recent heavy liquidation in stock and commodity markets money shows further relaxation. Call loan rates on the Stock Exchange this week dropped to 5 per cent., and even to 4½ per cent. temporarily, while demand loans were renewed at 6 per cent. for the first time since the early part of June. Time money rates have also declined ¼ to ½ per cent., being quoted at 7¼ to 8 per cent. according to maturity and collateral, but demand for fixed-date funds continues light, prospective borrowers holding off in anticipation of further relaxation. Commercial paper also displays an easier tendency, a larger volume moving at 7¾ per cent., whereas 8 per cent. has heretofore been the general trading rate.

FRANCE. — THE FINANCIAL POSITION—NEW LOAN —SURSALAIRE FAMILIAL—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 7.

FRENCH financiers are beginning to be rather tired of the many comments that have been made on the financial situation of France, and M. Klotz, M. Marsal's predecessor at the Finance Ministry, has at last broken silence. He has voiced what has been felt here during the last two years in financial circles, that too much has been said as to the need of pitying France, and that even more has been said unnecessarily as to the neglect of France to take the necessary steps towards re-establishing her economic and financial position. At the outset of his article, which he publishes in the *Revue Economique Internationale,* M. Klotz admits frankly that the country suffers from depreciated exchange, and that it owes in foreign debts more than 83 milliards of francs. But he points out that, as against this, when the country borrowed this sum, it only received some 36½ milliards. He congratulates his country on having incurred 59 per cent. of its expenditure to meet the needs of its soldiery during the war, on having expended 13 per cent. to meet its indebtedness, on having given 11 per cent. to counter distress caused by the war, and he congratulates it even more thoroughly on spending 6 per cent. for the reconstitution of the devastated area. Only 19 milliards, or 11 per cent. of the total, have gone for ordinary expenditure.

Coming to the present situation, M. Klotz argues that 35 per cent. of the expenditure of France to-day is due to the work of reconstruction; or, in other words, to the fact that the northern part of France was used as the battlefield of Europe. The 1920 Budget has been so arranged that the 22 milliard francs required for normal expenditure has been met by taxation, and that, apart from this, there is a budget of 5½ milliards which is the direct result of hostilities, and some 21 milliards due to war devastation that, by the Treaty of Versailles, are recoverable from Germany. M. Klotz meets criticisms of those who have attacked France by stating that by the single act of June 25, 1920, the country has created not less than 8 milliards of new taxation.

Although no official announcement can yet be made as to the total amount of the subscriptions to the new 6 per cent. National Loan, as the returns are not yet complete, it may be accepted as well founded that the total sum received is in the neighbourhood of 30,000,000,000f, and may possibly prove to be even more. The amount of new money received is stated in ordinarily reliable quarters to be about 8,000,000,000f, while subscriptions in the form of Bons de la Défense National are estimated at between 7,000,000,000f and 8,000,000,000f. Data so far established enable it to be stated that the amount received in connection with the Journée de Commerce (on November 25th, when the trading community in 57 of the French towns, in response to an effort made by the Paris Chamber of Commerce, devoted the whole of their receipts to the loan) will amount to something in the neighbourhood of 200,000,000f, of which from 80 to 100 millions represents the sum received in this way from Paris itself.

Special attention has this week been focussed upon an entirely novel form of sociological development by the assembly at Roubaix, under the presidency of the Minister of Commerce, M. Isaac, of the general meeting of the "*Caisses de compensation,*" or clearing-houses, that were founded some two years ago for the purpose of ensuring to working people with families the payment of what is known as the *sursalaire familial,* or extra wages in respect of the children they possess. As this movement, although still in its infancy, has already met with remarkable success in this country, both in enabling working-class families to meet the high cost of living, and as a means of counteracting the evils of depopulation, a brief elementary explanation of the system may be interesting. The *sursalaire familial* consists in an extra payment made to a workman, over and above his wages, and in respect of such family charges as he may have to meet. For example, a weaver, married but without children, may earn 160f a week, while his wife, owing to the operation of the eight hours' law, is able not only to attend to her household work, but also to earn 100f a week as a worker in the same factory. This childless couple, therefore, are able to earn an average of 19f each a day, on which to live and to economise against a rainy day. In the same factory, perhaps, is another workman, with a wife and four children, who also earns 160f a week, but this is their total income (or 3f 80c per head per day), as his wife is unable to leave her children for the purpose of adding to the family income. The *sursalaire familial* is designed to remedy inequalities of this kind. It is the logical French extension of the principle of equal work, equal wages, which has come more and more into prominence in labour contracts of recent years.

The general results achieved have been admirable. On July 1st last 480 industrial establishments participated in the movement, and had during the four previous months distributed in this way the sum of 4,115,000f among 40,000 workmen's families. The Roubaix-Turcoing clearing-house alone is distributing 66,000f per day in this manner. The National Federation of Linen Manufacturers makes payments in the form of extra wages (after twelve months' employment, to all workmen earning less than 8,000f a year) at the rate of 240f a year in respect of a child of less than 13, 600f for two, 1,080f for three, 3,330f for six, 4,200f a year for seven, and 35f a month additional for each of more than seven children. A special allowance of 200f is made to the mother at the birth of each child, and a gift of clothes for the infant. The success of the experiment, so far, is a guarantee that the system will form a permanent part of the French industrial economic system.

The Bourse has been weak throughout the last ten days, and, though there was something in the nature of a suggestion of firmness towards the middle of last week, markets concluded on a slump. According to expert opinion the real reason for this depression is not so much the particular situation as the general depression existing throughout the commercial and industrial world. French Funds responded to the success of the loan, and have rather improved, the 3 per cents. rising from 55.80 to 56.40. Banks have generally fallen, Crédit Lyonnais dropping from 1,580 to 1,556, Banque de Paris from 1,580 to 1,547, and Union Parisienne from 1,070 to 1,040. Foreign banks have followed the movement. Railways have remained depressed, Nord standing at 910, Orléans at 815 and P.L.M. at 720, as against 735. Metro has dropped back from 330 to 316, and shipping shares are in depression, Transatlantique being at 314, as against 324, Messageries at 284, as against 297, and Chargeurs Réunis at 1,055, as against 1,120. Metallurgical undertakings have not escaped the general influence, and, though Longwy has risen from 1,400 to 1,460, Chantiers de la Gironde have dropped from 625 to between 570 and 605. There has been little movement in the metal group, although prices have fallen generally. Tintos are down from 1,475 to 1,440; Boléo is rather better at 768, as against 705; Penarroya has fluctuated on a downward tendency, and Utah has dropped from 872 to 831.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY. — FORCED LOAN, FORCED LABOUR—EXCHANGE AND BOURSE—TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 4.

THE questions of a forced loan and of compulsory civil service again came up this week. Compulsory work, in the form of "an economic service year," has twice during the past half-year been foreshadowed by individual Ministers; but the practice of Ministers in such controversial questions has so far been to qualify statements of policy by declaring that they express only their own views. The Reichswirtschafts-Minister, Dr Scholz, this week told the Reichstag that the introduction of a service year must be earnestly considered; and added that he personally considered it necessary. "The educative element which lay in compulsory military service is to-day lacking. An economic service year would train to labour as a moral duty." The Cabinet's collective attitude has not been defined. All the Socialist parties and some of the German Democrats oppose this plan; and the former Minister of the Treasury, Herr Gothein, criticises it unfavourably. The forced loan was definitely promised by the present Finance Minister, Dr Wirth, immediately after he took office, the condition—since fulfilled—being that the population would not voluntarily lend to the State. The plan is now formally advocated by the Reichsbank President, Dr Havenstein, who described it as a better means for stemming inflation than the accelerated collection of the State emergency levy, though he supported also this. Dr Havenstein, who has hitherto, critics think, somewhat too submissively allowed the Reichsbank to be perverted from its position as protector of the currency into a mere intermediary between the Finance Ministry and the note-printing press, now declares that the floating debt of 147 milliards is a peril to the whole national economy; and adds that to the debt before the end of the financial year 30 milliards more will have to be added. He suggested a forced loan of 20 milliarls, to be raised in two instalments with a short interval between, and to bear 4 per cent. interest. The Government's reply to this suggestion is, as usual, vague. The Finance Minister announced that he had proposed a forced loan as an alternative to the accelerated collection of the emergency levy, but that the Cabinet has decided against the loan. He added that he personally considers the loan a better solution, on condition that its immediate cash yield is greater than that of the levy. The Reichswirtschafts-Minister stated that the loan was rejected because mere mention of the plan increased the smuggling out of capital.

The Reichsbank report for the week ending November 23rd shows a considerable relaxation of the pressure for credit, and a drop of 775.2 million marks in the circulation of notes and kassenscheine. The note circulation fell by 512 million marks to 62,592,900,000 marks, and the circulation of kassenscheine by 263.2 millions to 12,382,900,000 marks. The decline in total circulation since beginning of the month is 1,644.7 million marks. The Government is considering the imposition of a stamp duty on all dealings in foreign exchange, with the main aim of checking speculation and accumulation of foreign notes for hoarding. The agreement come to between Government, Reichsbank, and Bourse is for a duty of ½ per mille on bill transactions, 1 per mille on note transactions, and 1-10th per mille on arbitrages. The foreign exchanges, after a drop in the preceding week, have again risen, though slightly, this week. Sterling rose from 241 to 248, the dollar from 69 to 71, and the Swiss franc (100) from 1,080 to 1,110. The Finance Minister has made a Press statement as to the causes of the rise in the exchanges since last summer. The main causes he sees in the large German foreign payments for foodstuffs. Under the Spa Agreement, Germany was to get 360,000,000 gold marks in six months for the purpose of improving food conditions. This, says Dr Wirth, has not diminished the demand for foreign exchange, because since Spa the food position (owing to the bad rye crop) has become worse; and, further, because against the gold food subsidy stood heavy payments under the pending clearing process. Germany's net debts under the clearing process have to be paid in cash; and, owing to earlier preparation, England is far ahead with her claims. In the months August-October Germany has had to pay sums which, expressed in gold marks, are nearly equal to the Spa subsidy. In these three months Germany has paid clearing obligations of 2½ milliard paper marks. Regarding the future, Dr Wirth says that in the next few months Germany will have to make further heavy payments to England, France, and Belgium; and that the ratio of the clearing debts to the Spa subsidies will become still more unfavourable.

The direction of the Deutsche Bank has joined other authorities in protesting against the present unbridled stock speculation. This protest, the statements of Dr Havenstein, bad reports of railway transport in Upper Silesia and on the Ruhr, a Government plan to limit industrial dividends, and a decline in Home Loans affected Bourse quotations. The first days of the week brought considerable declines, but there was a recovery yesterday, and to-day stocks were mostly firm. A report that the Commerz und Disconto Bank is about to join Herr Stinnes' combination of the Siemens electrical interests and the Rhine-Elbe Union caused a rise in the stock of this bank. The stock of the mining corporations were depressed by a final refusal of the Government to sanction an increase of coal prices. On Thursday some of these stocks suffered sharp declines, that of the Phœnix Company, which had reached a top price of 740, dropping 100 points. Some financial journals took the depression early in the week as text for proclaiming that the Bourse boom, which has continued, with only slight recessions, since June, had come to an end; but the close of the week brought signs that the speculating public has already recovered from the fright caused by the measures and plans mentioned above. A bull factor is the announcement that the long-prepared organisation for dealing in exchange for future settlement will come into action next month. The speculative 3 per cent. Reichsanleihe closed the week at 67.40, and yesterday at 67.10 showed a drop of nearly five points in a week; but the 3½ per cent. recovered from 58.80 to 59.10.

The price of the 4 per cent. is to-day 67.40, and of the 5 per cent. War Loan 77.50.

The Prussian Diet this week sanctioned the plan for completing the unfinished "Mitteland-Canal," which connects the Rhine, Wesen, and Elbe basins. The completion of the canal was for years delayed by opposition from the Agrarians. Negotiations between the States have produced an agreement to extend branches of the canal to Leipzig, Halle, Merseburg, and Brunswick. The level of the Elbe will be materially raised. The works planned will require over 10 years for completion. A marked improvement in selling conditions in the iron market is reported. Some of the Western ironworks which were recently short of orders report having work for two months ahead; but in foreign markets French and Belgian competition is felt, and Germans complain that they cannot get orders at the minimum export prices fixed by the "Eisenwirtschaftsbund." Good business is being done with the Dutch colonies in bar-iron, tubes, and plates; and there are increased orders from Scandinavia. In Switzerland French companies are underbidding German. The efficiency of mining labour, a Ruhr report shows, is not increasing. The coal output per man per shift, which in February was 0.613 tons, was in September only 0.578 tons. Textile companies report continued improvement, in particular heavy demand for silk, upholstery, cloth, stockings, and gloves. The heavy fall in cotton prices in the world market has more than counter-balanced the decline in the mark exchange; raw cotton in Bremen fell last month from 51½ to 32 marks a kilo; and the spinneries report an increase in their ability to buy the raw material.

ITALY.—BUOYANT STOCK MARKETS—BREAD SUBSIDY LOSS.

(FROM OUR CORRESPONDENT.)

ROME, December 5.

ITALIAN stock exchanges have had a good time in the last two weeks. After a long spell of falling prices, quotations have revived.

	Oct. 30, 1920.		Dec. 4, 1920.
State Rentes, 3·5 %	66.50	....	75.50
State Rentes, 5 %	68.25	....	76.90
Bank of Italy shares	1,270	....	1,400
Banca Commerciale shares	1,010	....	1,138
Credito Italiano shares	640	....	715
Banca Italiana Disconto shares	550	....	583
Meridional Railway shares	322	....	365
General Navigation shares	600	....	710
Fiat (motor cars) shares	186	....	265
Terni (iron and steel) shares	550	....	750
Ansaldo „ shares	106	....	150
Ilva „ shares	96	....	110
Edison Electrical Co. shares	485	....	543
Vizzola „ shares	740	....	780
Cantoni (cotton) shares	670	....	745
Rossi (wool) shares	1,280	....	1,480
Eridonia (sugar) shares	278	....	350
Beni Stabili (House & Building Co.) shares	280	....	305
Fondi Rustia (Land Co.) shares	206	....	255

The highest proportional rise was for the shares of the Fiat Company and for iron and steel shares. The movement originated in the conclusion of the Treaty of Rapallo, but the improvement of internal political conditions has played a part. Rumours of postponement of the law enforcing universal inscription of stocks and shares with the name of possessors were exploited by the bull party.

A somewhat doubtful move is the authorisation, or, rather, the order given to banks of issue, to issue more paper money for advances to the iron and steel industry. There was a serious prospect of wholesale dismissal of workers in the Ilva, Ansaldo, Savona, and other great iron works, but Government stepped in, afraid of social troubles among unemployed masses, and forced the State Railway Administration to give orders for rails at a price much higher than the international price, and authorised paper advances to embarrassed companies. This step sent up the Bourse quotations of iron and steel shares.

But the aggravating paper inflation from which Italy is suffering so much was severely criticised in the Press.

The Bill for raising the price of bread to correspond with the cost of home wheat, so that the loss will be limited to the difference between internal and external prices, is making progress. Yesterday the House of Deputies discussed it in public session, and, notwithstanding the opposition of Socialist members, it is anticipated that the Bill will pass. The reporter of the Budget Commission gives the following figures for the Exchequer loss:—On the foreign imported cereals from July 1, 1914, to June 30, 1919, 6,011,000,000 lire; from July 1, 1919, to October 30, 1920, 6,180,000 lire. On national cereals requisitioned from July 1, 1914, to October 30, 1920, 2,351,000,000 lire. Total loss, 14,542,000,000 lire. Anticipated loss for the last two months of the year, 1 billion lire. Total loss up to the end of 1920, 15,542,000,000 lire. A truly appalling figure.

POLAND.—FINANCIAL AND ECONOMIC CONDITIONS—FOREIGN CAPITAL—POLISH INDEX NUMBERS—TRADE CONVENTION WITH DANZIG.

(FROM OUR CORRESPONDENT.)

WARSAW, December 2.

MR GRABSKI, before his resignation as Minister of Finance, delivered at a meeting of the Federation of Manufacturers and Bankers a speech in which he drew attention to the difficult financial and economic situation into which the country has been plunged. The expenditure of the Government has been in the last months ten times greater than the revenues; the deficit could be covered only with the help of the printing press; the trade balance was very unfavourable. The Ministry of War absorbed 80 per cent. of the whole expenditure, the Ministry of Railways 8 per cent., so that for all other public services, as reconstruction, schools, &c., there remained only 12 per cent.

The new Minister of Finance, Mr Steczkowski, has been granted a measure of control amounting to a financial dictatorship. It seems that he will try to reduce first of all the expenses of the Ministry of War. Such reduction is an essential condition of bringing the expenditure of the country into harmony with its real revenues. Mr Steczkowski as well as his predecessor is convinced that a reconstruction of Polish economic activity is impossible without the help of foreign capital, and it is believed that Mr Steczkowski, by giving concessions and by exempting foreign capital from taxation, will try to attract it.

For the first time a Polish index number dealing with the years 1890 to 1919 has been compiled by Professor Fiedorowicz. The prices of the period 1890-1899 are taken as a basis. The data are interesting in many respects. For the pre-war period they show that Polish prices were moving in the same direction as those in Western Europe and in America. From 1890 to 1896 the index number fell from 109 to 93; since that year an upward movement similar to that in other countries can be observed. In 1913 the index number reached 121. During the war the paper inflation disorganised markets completely, so that prices rose in a proportion unknown in Western Europe. Actually two kinds of quotations must be distinguished: those of the free market and those fixed by the public

authorities. The figures below show the movements of prices since 1914:—

		Free Market.	Commodities Subject to Maximum Prices.
First half-year,	1914	116.7	..
Second „	1914	139.3	..
First „	1915	172.0	..
Second „	1915	354.3	136.4
First „	1916	385.0	157.3
Second „	1916	487.7	189.0
First „	1917	1015.6	200.6
Second „	1917	1625.4	267.6
First „	1918	1648.0	336.0
Second „	1918	2003.9	435.3
First „	1919	2128.8	496.3
Second „	1919	3042.9	604.3

From the beginning of the war to the end of 1919 prices have risen on the free market by 3,000 per cent., and for some articles it amounts to more than 20,000 per cent.

The signature of the Convention between Poland and Danzig at Paris opens a new chapter in the history of the two territories. In three months all Custom frontiers between Poland and Danzig are to disappear. The Danzig Chamber of Commerce has prepared a plan according to which the introduction of the new *régime* would be extended over a larger period. Danzig merchants are fearing that the Polish protectionist tariff might prove prejudicial to their interests, and they will certainly exercise a strong pressure to modify it in a free trade direction. The Danzig Chamber of Commerce in its memorandum dealing with the new Convention dwells on the fact that the geographical situation of the city renders the adaptation of such a policy necessary.

The emigration from Poland and from Russia was before the war directed principally through German seaports of the North Sea. There existed only one emigration line, which started from the Baltic, a Russian company, whose ships were plying between Libau and New York. It is certain that in this respect the war will bring about a great change.

CORRECTION.—In my letter of October 22nd it was stated, through a misprint, that each of the Polish banking concerns has a capital of "half-a-million" marks (*Economist*, October 30th, p. 784). It should be read "half-a-milliard."

SWEDEN.—CONDITIONS IN IRON AND STEEL INDUSTRY.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, December 3.

THE Association of Swedish Iron Works has just published a report for the third quarter this year, giving a rather gloomy impression of conditions in the iron trade. Of 132 furnaces registered, there were at the end of October only 62 working, as against 68 at the end of August. As regards Lancashire hearths, 82 were in operation at the end of October. Of Bessemer furnaces, only 9 out of 18, and of Martin furnaces registered, only 45 out of 77, were operating. Electrical steel manufacture has in later years increased strongly in Sweden, in all, 25 electrical ovens having been built, but of these only 6 are now working. The production of pig-iron and foundry goods amounted during the last quarter to 123,800 tons, of which 33,500 tons were exported, and of Martin ingots 103,300 tons, of which 3,900 were exported. The exports of iron ores from Sweden are this year well maintained, with even a slight increase as compared with last year. Total exports amounted in the period July-September this year to 1.32 million tons, as against 955,000 tons and 635,000 tons during the two preceding quarters, and during the first 10 months of this year there have been exported in all 3.26 million tons, as against 2.25 million tons during the corresponding period of last year, or an increase of 1.01 million tons. Most industrial undertakings are this year showing inferior results, but an outstanding exception is the Stockholm Breweries, which this year declares a record profit of 6.72 million kr, or 42 per cent. higher than last year. This excellent result is in the first hand attributed to increased consumption by the working classes. Few new flotations are recorded nowadays.

SPAIN.—FINANCIAL DIFFICULTIES IN BARCELONA —HIGHER TARIFF DUTIES.

(FROM OUR CORRESPONDENT.)

MADRID, December 2.

THE Spanish Government, in view of the financial position in Barcelona, and in order to prevent serious consequences, has requested the Bank of Spain to co-operate in restoring stability to the situation. The Bank will receive guarantees both from the Treasury and from the Barcelona concerns involved in monetary troubles. The cause of these financial difficulties, felt not only in Cataluna, but all over the country, lies in the widespread exchange speculation that has been going on for some time past.

The Madrid *Gazette* publishes a Royal decree, by which the Minister of Finance is authorised to raise the Custom House tariff considerably on 209 articles. The Spanish Government justifies this resolution by pointing to the great increase of importation of articles of luxury and the difficulties in placing Spanish goods abroad with the restrictions on importation decreed in foreign countries. But it is considered by many that the real reason for this measure has been to close the Spanish market to the great flood of French "articles de luxe" that were entering at a moment when the French Government had put such high duties on as to seriously hamper the Spanish wine trade. It is expected that before the revision of the Spanish Tariff takes place, a better commercial understanding will be come to between Spain and other countries, specially with France and England.

Letters to the Editor.

BUREAUCRATIC MANAGEMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Some little while ago you allowed me to criticise in your columns Sir L. Chiozza Money's book, "The Triumph of Nationalisation," and to show that nationalisation and democracy are incompatible; that the German railways, for instance, which had been a fair success in the time of the old autocracy, had gone to rack and ruin under the democracy, and threatened to bankrupt the country. Recently England has provided another proof of the disadvantages of bureaucratic management.

The English Civil Service is second to none. Its members are, on the whole, singularly broad-minded, painstaking, conscientious, and honest. They stand, as a class, far above the officials of most countries. They have honestly tried to manage the coal-mining industry. They have endeavoured to harmonise the conflicting interests, to increase efficiency, and to augment production. Their interference has been absolutely disastrous. Conflict and dissatisfaction have been in permanence, the coal mining industry has suffered from unprecedented unrest and strikes, and production, which the Civil Servants endeavoured to increase, has continually fallen off with incredible rapidity. At last the Government resolved to slightly loosen the fetters, and to allow the coal owners and miners to arrive at a mutual arrangement. The result has been absolutely miraculous. During the last week coal production has been by 500,000 tons greater than during the average week under bureaucratic control. If last week's record should be maintained, there ought to be an increase of 25,000,000 tons in the quantity of coal raised per year.

The dead hand of bureaucracy has been partly withdrawn. The beneficial result of allowing those who, as employers and workers, know the industry to manage it has immediately been shown. However, there is no reason to believe that an increase of 500,000 tons in the weekly output is an exceptionally good result, or is the highest average result that may be hoped for. I have frequently pointed out in periodicals and elsewhere that it should be possible to double coal production per man. The bituminous mines of the United States produce per worker five times as much as the British mines, while the American miners employed in the anthracite mines raise without any coal-cutting machinery—the seams are thin, broken, and irregular—three times as much per worker as the British miners. There is, therefore, every reason to hope that it

should be possible to double coal production in this country to the great advantage of all the industries and of the miners themselves. If the Government will at last allow those people to manage the industries who understand them, I think that England's coal production may be doubled before long. Naturally, the doubling of coal production should speedily lead to the doubling of industrial production, of national income, and of tax revenue. The grave financial problem would thus be solved.—I am, Sir, your obedient servant, J. Ellis Barker.

DUTCH AFFAIRS.

TO THE EDITOR OF THE ECONOMIST.

Sir,—Allow me to notice to your readers that your Dutch correspondent, in his letter of November 22nd (in your issue of November 27th) is not quite complete in his information about a few subjects he writes about.

First: Mentioning that the slump in sugar prices affects the colonial markets seriously, he adds that of a new loan, which seems to be at hand, very little should be placed in the colonies, whereas a previous East Indian loan was subscribed to a very large extent in Java itself. I think that the success of a new loan in Java will largely depend on the measures the Javabank (East Indian Note Bank) will take this time; for the large subscriptions on the last loan were not so much owing to the welfare Java enjoyed at that time as to the favours the Javabank awarded to the subscribers. On the bonds of the said loan, bearing interest at 6 per cent. per annum, advances by the Javabank were given up to 90 per cent. of their nominal value, at a rate of 4½ per cent. No wonder that of the 125f millions which were subscribed at Java itself, 87 millions were pawned at the Javabank from the first day, only 100 guilders in this way being sufficient to secure an interest of 60f-40½f, equals 19½ guilders, *i.e.*, 19½ per cent. In case the Javabank gives the same "queer" favours, which promote inflation enormously, I think a new loan will have the same "apparent" success.

Secondly: Your correspondent relates that professors of economy attack the policy of the Netherlands Bank, which they accuse of unduly perpetuating the inflation, and that they insist on the export of gold. But he does not mention that the said professors insist also on increasing the discount rate of the Netherlands Bank, which is now 4½ per cent., the rate of interest of first-class bonds of the municipalities being 7 per cent. The Netherlands Bank is the only central currency bank of the world (the Reichsbank excepted) that has not increased its discount rate since 1915. I fully agree with your correspondent in appreciation of the insight of the President of the Netherlands Bank in difficult matters, but I think the maintaining of a discount rate of 4½ per cent. in the present monetary situation of Holland—the paper guilder is depreciated 25 per cent.—will hardly have the approbation of one of the ordinary members of the Committee for Currency and Exchanges of the Brussels Conference, a committee which was composed only of "business men of unquestionable authority" (presided over by the President of the Netherlands Bank), and from which "professors of economy" systematically were kept far.—I am, Sir, yours faithfully, A Dutch Professor of Economy.

Holland, December 4th, 1920.

INDIAN EXCHANGE.

TO THE EDITOR OF THE ECONOMIST.

Sir,—With reference to the remarks of "F. W. S." in your last issue, I meant, of course, in my letter of October 2nd that the rupee is "legally" harnessed to gold under the Indian Coinage Act, and as my letter under reference was an endeavour to elucidate the main causes of the fact that "the silver steed had broken away from the golden chariot," it is not quite clear why your correspondent quotes me as implying that such harnessing was effective.

With regard to his second paragraph, there is no denying that some currency inflation exists in India, and that if the Government of India and its advisors on the Currency Commission had had foreknowledge of subsequent events, they would have decided to act differently in certain respects, and some of the inflation might have been avoided. The principal of these events, however, would appear to be the huge absorption of imports by India at a time when foreign countries cannot afford to buy her exports, and this is presumably the result of the war-time prosperity to which your correspondent refers. All of your readers interested in Indian finance and currency will do well to read the address of Mr F. C. Goodenough (chairman of Barclays Bank, Limited) before the Liverpool and District Bankers' Institute, which gives the most lucid brief account of the position which I have yet seen. A report of this speech appears in to-day's *Financial News*.—Yours faithfully, E. P. Stocker.

December 7th, 1920.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

Books and Publications.

REVIEWS.

"England in Transition, 1789-1832." A Study of Movements. By William Law Mathieson, Hon. LL.D. Aberdeen. Longmans. 15s net.

The industrial revolution is only one of several interesting movements which, in about 70 years, transformed not only the economic, social, and political conditions of England, but the whole mental attitude towards them of the English people. Mr Mathieson does not neglect the economic movement, but other forces are his chief topic. His introduction sketches the renascence, after a decline, of the philanthropic efforts initiated within the Church at the close of the eighteenth century; the commencement, on the prosecution of John Wilkes, of the modern methods of political agitation; the efforts of Howard at prison and of Cartwright at constitutional reform; the growth of political speculation and religious free thought, and the agitation against the slave trade. Their efforts were temporarily checked by the reaction induced by the French Revolution, but they revived after the rise of Napoleon had averted the danger of Jacobinism, and, in spite of another check following the peace of 1814, bore fruit in the vast educational, penal, legal, and political reforms, crowned by Catholic emancipation ("essentially an Irish question"), and by the Reform Act of 1832, and they were all the more effective through their delayed action. The dominant spirit in them all was a passion for freedom, and hence they fell short in one important respect—the protection of the workers against the intensified hardships of competition. Mr Mathieson's book is an admirably condensed exposition of their action, and incidentally of the problems set up a century ago by the coming of peace—problems analagous to some of those of to-day.

"Bank Credit: A Study of the Principles and Factors Underlying Advances made by Banks to Borrowers." By Chester Arthur Phillips, Ph.D. (New York) The Macmillan Company; 1920. 24s.

It is not often that one comes across a banking treatise which combines a practical knowledge of banking methods with a clear grasp of banking theory. In the present case we get both, and for this the author, a professor of economics and of banking and finance in two American colleges, deserves every credit. His stated object is to familiarise his readers with the theory of banking, especially the lending branch, in both its abstract and its concrete aspects, and to this end he divides his subject into two parts. In the first and more controversial section, with the aid of diagrams and algebraic formulæ, as well

as logic, he discusses the quantitative aspects of bank credit; in the second he deals with its qualitative aspects.

To the student of currency the earlier section of the book will naturally prove the more attractive, and to such the chapter dealing with the inter-relation of cash, loans, and deposits may be specially commended. To the student of banking and the practical banker, who find more interest in the exposition of banking methods and processes than in the theory underlying them, the second section will appeal more, dealing, as it does, in a clear and practical fashion, with such matters as the examination of bank borrowers' statements of affairs, loans against cotton and crops, and overdrafts, the last-named, by the way, described as "an objectionable form of credit advance," but this, of course, from an American banking standpoint.

A book dealing with the English banking system on similar lines would be a real boon, but failing such a treatise, it may be affirmed that the greater part of the work under review is as applicable to English as to American methods of granting credit.

Rapport sur le Commerce et l'Industrie de la Suisse, 1919. (Zurich) Union Suisse du Commerce et de l'Industrie.

THE report on Swiss commerce and industry which is published every year by the directors of the Swiss Association of Commerce and Industry has just appeared for the year 1919. The detailed reports on the various forms of economic activity in Switzerland, together with the statistics given, provide much information for those interested in the commercial and industrial situation of this country. The following figures of imports and exports are taken from pages 19-20 :—

EXPORTS from GREAT BRITAIN to SWITZERLAND.

(In Million Francs.)

1915.	1916.	1917.	1918.	1919.
112.0	159.5	269.2	247.7	363.0

EXPORTS from SWITZERLAND to GREAT BRITAIN.

(In Million Francs.)

1915.	1916.	1917.	1918.	1919.
355.1	424.0	361.5	268.6	347.1

Various tabular statements on production, prices, wages, &c., for 1919 and for the last few years, as well as for the years preceding the war, are included. This report can be obtained by applying to the Commercial Intelligence Department of the Swiss Legation, 32 Queen Anne street, London, W. 1.

"Sell's World Press, 1921. The Handbook of the Fourth Estate." London) Sell's, Limited, 168-169 Fleet street, E.C. 4.

THE volume in front of us is something more than a mere newspaper directory. It claims to be, and with some truth in the claim, "a survey of the world's press." Lord Northcliffe contributes an article on "Some of the Functions of a Newspaper," while Mr Robert Donald writes on "New Forces in Journalism." Other articles of interest to journalists in particular and the public generally are included.

BOOKS RECEIVED.

Labour and Industry. A Series of Lectures. (London) Longmans, Green, and Co. 12s 6d net.

The lectures printed in this volume were delivered in the Department of Industrial Administration in the College of Technology, Manchester, during the session 1919-20.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 14.	December 15.

THE record of the Stock Exchange week is a very uneven one. There have been violent fluctuations in certain of the leading shares, those in the oil market, as usual, being the most erratic. Although the Stock Exchange markets would stand to benefit enormously with the rest of the community by any substantial decrease of Government extravagance, brokers and jobbers attach no more than abstract importance to the debate on Thursday night—so far, that is to say, as regards the immediate outlook. The Budget of next April is awaited with apprehension, and the increase in unemployment, with its consequent development of unconstitutional action on the part of those out of work, is one of the minor factors which makes for the uneasiness that characterises the industrial sections.

The feature of the week in the Consol market is the way in which underwriters of the sevenfold Corporation loan were left with stock in every case. Of the Bournemouth issue, the public took 33 per cent., and of the Rotherham loan only 1 per cent. In the cases of the other five corporations, the underwriters were left with over 90 per cent. Thanks to the skilful way in which the underwriting was allotted, no harm resulted to the market as a consequence of the issue, and within a few days the Bournemouth stock had advanced practically to its par price of 95½, while the discount on the rest, which at first was 2 per cent., gradually narrowed as buyers came in. It may be of interest to observe that the underwriting commission on the whole loan was 1¼ per cent., and that underwriters had to take their obligations in a block, so that they were left with seven different stocks as a result of their obligations. The War Loan has kept tolerably steady. India Rupee scrip gave way on the fall in the exchange. In National War Bonds there has been little doing.

Amongst foreigners, Japanese Four and a-Halfs have been

over 110, in consequence of the American exchange, but French bonds, as the franc gave way, went down again, the Fives being no better than 42. One or two of the Chinese issues improved on buying by those who are looking forward to the approach of the next drawings. Peruvian Corporations continue dull under the influence of the recent dividend. A fair amount of speculation in German Threes is going on, and the price, after touching 5½, recovered a little. Most of the Russian Government-guaranteed Railway bonds show falls of a nominal 5 points. The issues are now quoted on a common basis of 10-20.

Apart from a rise in Underground Income Bonds, the Home Railway market remains stagnant and uninteresting. In the circumstances, the tendency naturally has been to let prices sag. Grand Trunk Guaranteed hardened on the approach of the dividend payment next month, the first which will have been made since April, 1917. Mexican Rails are merely steady, and Argentine Rails have escaped fairly well from the liquidation process which has been going on in various parts of the markets. Nitrate shares have relapsed into indifference.

The inclination of the Rubber market has been towards lower levels, and various companies have announced the passing of their dividends, interim or final. This was not unexpected, and it had little effect upon the prices of the shares immediately concerned. A certain amount of mild investment buying came from the provinces. The Oil market holds its position as the centre of interest, in that its movements are held to reflect the course of liquidation. Mexican Eagles are the hub of the list, and around their movements have revolved those in Shells, Burmahs, Royal Dutch, and, indeed, all the active list. It is certain that a good many thousand shares have been sold during the past week, but, on the other hand, this means that buyers have taken them, because at no time has the oil market shown any sign of the process known to the Stock Exchange as "drying up." After the oil market, chief interest has been taken in the movements of Dunlops, which have been extremely flat; Amalgamated Cotton, which recovered after a sharp drop; Courtaulds, which were actuely depressed; and the various satellites connected with these particular shares. The Banking list gives indications of weakness, noticeable especially in the Colonial and Foreign groups, where a monotonous series of falls have occurred day by day. The Insurance market, on the other hand, attracted mild support, although whenever shares did come to market they had a depressing effect upon prices. The P. and O. meeting on Wednesday exercised no influence over the Shipping department, where prices are inclined to ease off. Vickers, Armstrongs, Bolckows, and Thornycrofts simultaneously touched 20s. Other Iron, Coal and Steel shares are mostly lower. The newly-issued notes of various Industrial companies, *e.g.*, Gordon Hotels, Niger, Ebbw Vale, Beardmore and English Electric, stand at discounts of several points. Chinese Mining and Engineering shares fell abruptly on a report that was fully up to expectations, and this affords fair illustration of the contrary way in which prices are moving in the present unsettled state of the markets. The Hudson's Bay report failed to produce any effect upon the price. Egyptian Land and other Egyptian shares are mostly a little easier. Business in the Industrial market has been spasmodic and scattered. It is worth noticing that the prices of well-secured Preference and Debenture stocks, especially those which are established in the hands of permanent holders, exhibit but slight sign of the depression which is general amongst many other quotations.

The French exchange is held to be responsible for a further fall in South African Mining shares. The November returns were considered tolerably good on the whole, but had no practical effect. Geduld stand out exceptionally with strength, owing to the developments reported from the property. In Chartered and other Rhodesians, business has been so quiet as to cause prices to remain almost as they were. Occasional flashes of liveliness in Esperanzas lifted and depressed the price according to the rumours current in the market at the moment, which have had more effect than the official news published by the company. Santa Gertrudis 8 per Cent. Notes, recently issued at 98, have fallen to 15 discount. Burma Corporations came to life on a little buying, which had the appearance of being professional. Broken Hills remain heavy, because the Australians are unable to offer any support to their favourite market. West Australians recovered a little on the news that the woodcutters' strike is over. Russo-Asiatics gave way under the pressure of a little selling. Shares in the various Tin companies remain dull, because of the heaviness of the market in the metal, and Copper shares have declined, where they moved at all, under the leadership of the Rio Tintos sold from Paris.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

NEW ISSUES.

5-15 Year Treasury Bonds (Series B).—Repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. For full particulars see *Economist* of May 1, 1920, pages 899 and 945.

Drake and Gorham, Limited.—Authorised capital £125,000, in ordinary shares of £1 each, all of which have been issued. This is an issue at par of £50,000 10 per cent. seven-year notes, "repayable on December 1, 1927, and redeemable at any time by the company on six months' notice in writing to the registered holder, and in each case at 105 per cent." The firm of Drake and Gorham was founded 34 years ago, the present company having been formed in 1901 to take over the business. Surplus assets are valued at £173,970. This sum includes the full gross proceeds of the present issue, but excludes "goodwill." Patents and designs are valued at £43, which appears to be reasonable enough. There is a loan for £12,000 outstanding, secured upon leasehold property, but there are no debentures, and the company undertakes that "so

long as any of the notes are outstanding no debentures or charges on any of its assets (other than the mortgage for the loan mentioned above) will, without the sanction in writing of a majority in value of the note holders, be created, except to secure bankers' overdrafts in the ordinary course of business." The prospectus further states that "the directors and their friends, together with the staff and employees, have agreed to take £20,000 of the above issue," and that "the issue has not been underwritten." The statement as to past profits cannot be considered as satisfactory from the intending investors' point of view. These are given for the years 1918, 1919, and 1920 only, and "before charging interest on capital and borrowed money, excess profits duty, corporation profits tax, and income-tax." The company have an excellent reputation, and substantial contracts are stated to be in hand, but we must remind investors that though the yield on these notes at £10 12s. is attractive, the security of the note-holder is not superior to that of trade creditors. An article entitled "Short-term Notes" and two letters on the same subject which have appeared in the last three issues of the *Economist* should be referred to.

British-American Safety Razor Company, Limited.—Authorised capital £400,000, divided into 225,000 "A" shares of £1 each, and 175,000 "B" shares of £1 each. This is an issue of 225,000 "A" shares, of which the vendors are subscribing for 25,000 shares, and 200,000 shares are now offered to the public at par. Holders of "A" shares are entitled to one vote for every five shares, while holders of "B" shares are entitled to one vote per share. The whole of the "B" shares, to the value of £175,000, are to be allotted to the vendors in payment of "goodwill, trade marks, and patents," and in satisfaction of underwriting commission. The company has been formed to acquire from the American Safety Razor Export Corporation of New York certain trading areas and rights for manufacturing or dealing in advertised articles, including safety razors. Stocks are to be acquired for £31,000. Preliminary expenses, estimated at £15,000, are payable by the company. The parent American undertaking appears to be a substantial concern, and the two concerns are linked together by an interchange of directors. The value placed upon "goodwill, trade marks, and patents" for certain specified countries only, when compared with the total capitalisation of the company, appears to be very high. Moreover, voting powers which give the control of the company to "B" shareholders is a serious drawback for "A" shareholders.

Arding and Hobbs, Limited.—Authorised capital £250,000, divided into 75,000 7 per cent. cumulative preference, 80,000 8 per cent. cumulative preference, and 95,000 ordinary shares, all of £1 each. The issued capital amounts to £145,007, exclusive of the present issue. There are now offered for subscription 80,000 8 per cent. preference and 20,000 ordinary shares at par. The company was formed in 1912, with a nominal capital of £150,000, to acquire the drapery, furnishing, and outfitting business of Messrs Arding and Hobbs, of Clapham Junction, London. Profits are given from 1914. The statement of assets and liabilities is clearly set out. Property is taken at a valuation made in 1912. Goodwill is shown at £23,115. Against a total issued capital of £245,007, there will be assets worth approximately £293,000, including goodwill at the above figure. The prospectus is a reasonable statement of affairs, but two unusual items call for notice. The first is, that after a dividend of 10 per cent. has been paid on the ordinary shares, surplus profits are divisible between ordinary shareholders and directors, and the second is that the articles of association provide that, with the exception of paying off mortgages, the company shall not "borrow money on the security of the undertaking" without the sanction of preference shareholders. The preference shares are decidedly well secured, both as regards dividends and capital, while the ordinary shares are a good offer of their class.

The Stoll Film Company, Limited.—Authorised capital £300,000, divided into 200,000 10 per cent. cumulative preference, 99,000 ordinary shares, and 100 founders' shares, all of £1 each. This is an issue at par of 200,000 cumulative preference shares. The undertaking was formed as a private company in April, 1918, to establish on a big scale the business of film renters to cinema theatres, and has since been converted into a public company. The whole of the ordinary and founders' shares have been issued at par for cash. We extract the following statement from the prospectus:—"The total amount of the capital of the company, namely, £300,000, plus the assets, namely, £268,643, *i.e.*, £568,643, exceeds the liabilities, including all loans, and the expenses of this issue by about £315,000." The meaning of this statement is not clear, but we understand that it is intended to convey that surplus assets are £315,000 as against a paid-up capital of £300,000. In another part of the prospectus surplus assets are given as £239,306, and from this some investors would conclude that with a paid-up capital of £300,000 shareholders will have £239,306 of assets. Amongst assets the item "Film printing and advertising carried forward" is worthy of notice, at £28,845. Profits are given for a year and a-half. Of course, it may be that under the able guidance of Sir Oswald Stoll the company will be able to show a prosperous record. The issue is, however, a speculative one, and we do not consider the shares attractive.

The Malacca Rubber Plantations, Limited.—Authorised capital £1,000,000, of which £353,964 has been issued. There are also 6 per cent. mortgage debentures outstanding for £200,960. This is an issue of £150,000 8 per cent. seven-year notes at 96 per cent., of which the directors and their friends have applied for £52,150, which will be allotted in full. Holders of notes to the nominal value of £100 are entitled to the option of subscribing for £1 ordinary shares up to December 31, 1925, at 30s per share premium. The notes are repayable at 101 per cent. on November 30, 1927. The present quotation is round about 50s per share. Profits are set out from 1910, and dividends are shown for the same period. These latter have varied between 10 and 75 per cent. The issue is not without merit for those who are willing to accept a speculative risk, the attraction depending upon the view taken of the future course of rubber share prices. But investors should realise that they are lending money to the company on a simple note of hand, with a long deferred date for repayment.

The Lungla (Sylhet) Tea Company, Limited.—Authorised capital £300,000, divided into shares of £1 each, of which 100,000 are preference shares and 200,000 are ordinary shares. The whole of the capital has been issued, and is fully paid. This is an issue of £75,000 10 per cent. convertible first mortgage debentures at par, redeemable on January 1, 1926, presumably at par. The debentures confer upon holders the right at any time during their currency to convert into ordinary shares on the basis of £100 debentures for 100 ordinary shares. The current quotation is round about 15s for the existing ordinary shares. The company was formed in 1895 to acquire tea estates in the province of Assam, and it now has an area of 15,506 acres, of which 6,266 acres are under tea. The total cost to the company of the original estate of 14,882 acres was £190,000. Further capital expenditure amounts to £90,216. The company has a good financial record, and the money is required, it is stated, owing to "the present position and immediate prospects of the tea industry." The debentures will be secured by a first mortgage in favour of trustees on estates, buildings, and fixed machinery. This is an issue where the risks involved are commensurate with the high rate of interest, and the possibility of conversion rights becoming valuable.

Roneo, Limited.—Issue to shareholders of 125,000 ordinary shares of £1 each at 37s 6d per share. The capital of the company has been increased from £325,000, divided into 234,650 ordinary shares of £1 each and 90,350 preference shares of £1 each, to £450,000, by the creation of the 125,000 shares now offered. All capital, with the exception of the present issue, has been issued and paid up. According to the report of the company for the year ended June 30, 1920, the business appears to be in a prosperous condition. The old ordinary shares are now quoted at about 36s 3d, ex rights. Shareholders inclined to take speculative industrial risks should not regret exercising their options.

Mid-Kent Water Company (Incorporated by special Act of Parliament).—Authorised share capital £380,000, in shares of £10 each, of which there has been issued £232,260. Debentures for £54,740 have also been issued. This is an issue by tender of 1,000 7 per cent. preference shares of £10 each, at a minimum price of £10. From the prospectus it is not clear whether the issue ranks *pari passu* with existing issued preference capital (which now amounts to £99,020), or after or before such issue. The issued ordinary capital amounts to £133,240. The amount required to pay interest on loan capital and dividends on preference shares, including the present issue, is £7,235. With the exception of the year 1919, the annual net revenue of the company from 1913 has not been less than £12,000. The directors are to be congratulated upon following a policy which many of the lesser-known companies might copy, and that is, to send out with each prospectus a copy of the latest balance-sheet. The issue is well secured as regards payment of dividends, and the shares may be considered a fairly good lock-up investment.

Bognor Gas Light and Coke Company.—Sale by tender of £5,050 7½ per cent. redeemable debenture stock, minimum price of issue being par, and redeemable at par on December 31, 1930. The net revenue of the company for the twelve months ended June 30, 1920, amounted to £4,619. The interest on the loan capital, including the present issue, will amount to £1,693. The authorised capital of the company is £104,700, of which £78,621 has been issued. The authorised loan capital is £39,311, of which £21,200 has been raised. The stock may be considered well secured, both as regards capital and interest, but the investor should pay consideration to the confined market for the stock in the event of realisation.

The Vaudeville Theatre (Reading), Limited.—Authorised capital £120,000, divided into shares of £1 each. This is an issue of 60,000 shares at par. The company has been formed for the purpose of acquiring as a going concern the Vaudeville Electric Theatre at Reading. Optimistic estimates of profits are given. The price fixed by the vendors for the freehold and leasehold properties. goodwill, &c., is £40,000, payable in shares. The value of goodwill is placed at £15,000. This appears to be somewhat high, especially as past profits are not stated. Alterations are in hand, which have cost, up to the present, £28,063. This sum is to be paid to the vendors in cash. A further £29,000 is needed to complete alterations. We cannot discover an independent valuation of the property. This issue is one for consideration by local investors, but the prospectus does not read attractively.

Direct Fish Supplies, Limited.—Authorised capital £2,000,000, divided into 1,980,000 7½ per cent. (free of income-tax up to 6s in the £) cumulative participating preferred ordinary shares of £1 each, and 400,000 deferred shares of 1s each. After payment of dividend on the preference shares, the balance of profits is equally divisible between deferred and ordinary shareholders, "subject to the percentage remuneration payable to the directors." This "offer for sale" of 7½ per cent. cumulative participating preferred ordinary shares states that 601,000 shares have already been subscribed by 6,000 shareholders. The number of shares offered for sale is not stated, but the price is fixed at par. In the "particulars of shares offered for sale," we cannot find much information about the actual financial position of the company. The only detail worthy of notice is a statement that the company possesses a fleet of steam trawlers, &c., of the value of £375,000. Some information as to liabilities would be desirable. The shares are offered by the "British Chamber of Finance, Limited." The statement informs us that "the shares are particularly attractive." But, on the meagre information offered, we do not share this view.

OIL OUTPUTS.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—Total production during November amounted to 102,247 barrels, or approximately 14,607 tons, including 52,731 barrels from the properties of the St Helens Petroleum Company, Limited.

LOBITOS OILFIELDS, LIMITED.—The production for November is cabled as 7,837 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during November, 13,900 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday, December 1, 1920, amounted to 1,505 tons, which includes no further oil from well No. 124.

COMPANY MEETINGS, &c.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

LORD INCHCAPE ON RECONSTRUCTIVE FINANCE.

E.P.D. UNFAIR AND PERNICIOUS.

The eightieth ordinary general meeting of shareholders of the P. and O. Steam Navigation Company was held, on the 8th instant, at the offices of the company, 122 Leadenhall street, London, the Right Hon. Lord Inchcape, G.C.M.G., K.C.S.I., K.C.I.E., the chairman of the company, presiding.

The secretary (Mr Frederick John Abbott) read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, expressed regret that, in view of the none too rosy future of shipping, they were unable to propose a more generous dividend on the company's deferred stock.

INCREASED COSTS AND HIGHER FARES.

Although they had had, much to their regret, to raise passenger rates in all directions, they were, owing to the high level of operating expenses, carrying passengers at less than cost. The cost of compliance with demands by the stewards' and other unions for increased living space had necessarily to be passed on to the public. While it would appear to be impossible profitably to run, as separate units, the large passenger vessels now building, the value at which their fleet stood as a whole would bring the average value of these costly vessels considerably under pre-war prices. The satisfactory operation of the underwriting account had enabled them to increase the insurance fund by half a million to £2,500,000. He could only add to the report that, while they —and not they alone—had difficulties to face, they would, with the economic recovery which must arrive, be able to overcome them.

SALE OF EX-ENEMY STEAMERS.

Alluding to his purchase and resale of the Government standard ships, he had, he said, been asked by the Government to dispose also of the ex-German steamers, and had considered it his duty to do so in order to relieve the Government of the possible necessity of running them themselves. He had sold 93 of the ex-enemy vessels, and hoped soon to dispose of the balance. While many of the more recently built cargo vessels were excellent in every way, the German passenger ships were far below the British standard. His experience had led him to the conclusion that the shipbuilders of this country had nothing to learn from Germany in ship construction.

FALLACY OF "KEY" INDUSTRIES.

He could not understand why shipping, so far from being regarded as a "key" industry, was especially penalised under the excess profits duty, nor why the manufacture of magnetos should be regarded as a "key" industry, and agriculture, the only indispensable industry, should not. The war had revealed us as dependent on Germany for synthetic dyes, magnetos, drugs, chemicals and many other articles and materials; it also showed that Germany was even more dependent upon us. Our war-time improvisations were probably inferior, but they served the emergency. To make them now the foundation of our fiscal policy was a counsel of suicide. If it was necessary to foster any industry they had better have subsidies than licences, prohibition, and their attendant establishments. The truth of the matter lay in the paradox that it was just as accurate to say there were no key industries as to say that every industry was a key industry. From the many processes and materials and forms of human skill that went to the making of the products of modern manufacturing, it was absurd to select one and declare it to be more essential than the rest, where all were equally essential. The logical outcome of the agitation over "key" industries was, he said, that Great Britain should only manufacture goods all the raw materials and ingredients of which were to be found within the British Isles, or at any rate within the British Empire, for to that fantastic conclusion the "key" industry argument inevitably led. The only real service which the Government could render would be to leave the weather-beaten strength of British trade to fight its own battles in its own way.

THE NEED OF INDUSTRIAL PEACE.

There was a good deal of nonsense spoken about employers and employed. We were, he continued, all employers of each other. The dustman employed the bootmaker, the 'bus driver the tailor, and so on, and these in turn employed others. They employed him (the speaker) to look after the P. and O., and he employed others to help him. The nation employed His Majesty the King to reign over us—which he did uncommonly well—and he in turn employed Ministers to assist—or perhaps to hinder—him. In fact, we were, he said, already communists in the best sense of the term. Unique among the nations of the world, we had freedom, social happiness, and equality of opportunity, and losing these precious legacies we should lose everything. We had just weathered a strike in the coal industry which, had it continued, would have paralysed the life of the country. National prosperity was impossible when exposed to such recurrent menaces to basic industries. If this country was not to become a second Holland we must have industrial peace. The British workman was more advantageously placed than any other body of workmen on earth; but his benefits would be worth nothing if he did not "pull his weight" and restrain the wild men who were striving to wreck him. With the unions restricting output to the level of the least efficient worker, and controlled by advocates of continuous war between employer and employed, the industrial outlook was as grave as it could be. It was in such conditions impossible for a British manufacturer to quote terms and a delivery date. As a consequence orders were going abroad and unemployment was increasing. Industrial peace was becoming for us a question of national ruin or national salvation. Without harder work and a durable concordat between labour and capital they would never be able to break the hopeless chase of wages after prices, which made it impossible for our would-be customers to buy our goods. A year of stabilised wages would recover in trade all that we yielded up during the war. Without that truce the days of our commercial and financial supremacy were numbered.

ANTI-DUMPING LEGISLATION CONDEMNED.

He was, he continued, an unrepentant Free Trader; and he was convinced that the country's need was, more than ever, commercial liberty, without the obstruction of tariffs or bureaucratic meddling. Even so stalwart a Protectionist as Professor Hewins had declared that the whole conception of "key" industries was academic and impracticable. He had listened the other night to a moving speech by the Prime Minister which was absolutely sound, economically, until he came to dumping, as to which he said the Government were pledged to take action. There had been no such dumpers as British manufacturers; and to embark on an anti-dumping campaign would be setting an example to which we could take no exception in others. Carried to its logical conclusion, this would mean a total cessation of international trade, and we should be reduced to taking in one another's washing. Economic laws must assert themselves. Foreign nations might be able to supply us more cheaply than we could supply ourselves. France might, and Germany, with the low mark value, would certainly be a competitor. Protection as a remedy would be worse than the disease. We had to get back to sound economics and to our gold standard if these islands were to maintain their position in the world. The Government could greatly help the nation to get once more on the straight and narrow path of sound economics by refusing to have anything to do with Protection, by freeing industry from control, by abolishing the excess profits tax—which was exhausting all reserves and preventing fresh developments—and by balancing its expenditure and income. The "new world" of which we heard so much would, if based on bankruptcy, not be much of a success.

EXCESS PROFITS DUTY.

The excess profits duty had proved unfair and pernicious. People with a favourable datum line were sure of their untaxed pre-war profits; others with a datum line which was unfavourable were mulcted in from 40 to 60 per cent. of anything extra they made. The duty, through private and business extravagance, through inflated wages and consequent inflation of prices and of paper currency, was leading the country to financial chaos. Relied upon during the current year for a large portion of the revenue, the excess profits duty showed a serious decrease, with enormous reclamations against the Treasury. Nobody more condemned it than the Chancellor who was its author, now that he had some

years of practical business experience. It was not the Government alone which was to blame, but the members who, representing the people in Parliament, seemed unconscious of the threat of bankruptcy latent in all sorts of schemes for which money was voted and for which we could not afford to pay. The Prime Minister had intimated that drastic economies were to be instituted. It was to be hoped he would in this respect show the same courage which he displayed during the war. Economy did not consist in dismissing a few Whitehall messengers and typists. As an example, there were crowds of functionaries on the Tigris, fattening on Government pay, doing work which the commercial community there could do better at less cost, who ought to be wiped out.

EUROPEAN TRADE—NEED OF REVIVAL.

Before the war 40 per cent. of our exports went to Europe, and neither we nor any of the Allies, nor any of the States that our joint victory had brought into precarious existence, would be prosperous and stable until the economic recovery was general and included both the vanquished and the victors. One and all would revive from the war in proportion as Germany and Austria and Russia and Hungary revived. One reason for the depression of British industry was the absence of Continental demand. It was something to the good that we were at last making a beginning towards the resumption of trade with Russia, but much more would have to be done if Europe was to find its feet. For five years Europe produced merely to destroy. As a consequence, Europe and the world were poorer. The wealth so destroyed was now represented by paper obligations from the various Governments, which meant from the people themselves. Interest on this debt could only be paid by taxation, and taxation could only be paid by production, failing which there must ensue bankruptcy or, partly or wholly, repudiation.

THE UNEMPLOYMENT IMPASSE.

We had, he continued, got into this position: higher wages and shorter hours were everywhere demanded; yet unemployment was increasing, and the Government were starting relief works at the expense of the taxpayer. Men who were not allowed by the unions to take employment at a world-economic wage the Government proposed to support out of the consolidated fund. The whole system was wrong, and was bound to end in disaster.

I am afraid I may have wearied you with a somewhat lengthy dissertation on general subjects, but as the interest and welfare of commercial and industrial undertakings are so much bound up with sound economic action on the part, not only of the Government, but of the entire community, I hope you will forgive me for expressing my views, as nothing which those who have charge of our great undertakings can do will achieve success if cardinal principles are disregarded.

We have difficulties ahead of us; financial difficulties, industrial difficulties and labour difficulties, but these will in due time be surmounted if we only steer a safe and prudent course. We are at heart, after all, a fairly sensible people.

FINANCIAL POSITION OF THE COMPANY.

As for the P. and O. Company if it was broken up to-morrow—which it won't be—if its assets were sold at very much under their market value, if its preference stock were paid in full, if its debenture stock was redeemed at par, if all its obligations were discharged, if its employees were pensioned off, if you compensated the directors generously for relinquishing their office—as I am sure you would—sufficient would remain to give the deferred stockholders to-day's market price for their holdings—and possibly a pound or two more.

It is with great regret I have to refer to what is mentioned in the report, the loss we have sustained in the death of our colleagues, Mr Williams and Lord Cunliffe. The former had been on the P. and O. board for 20 years, and Lord Cunliffe joined us only last year, taking the place of Mr Brooks. The Hon Alexander Shaw, M.P., has been elected by the directors to fill one vacancy, and Sir Charles Addis, a director of the Bank of England and the Hong Kong and Shanghai Bank, has been elected to fill the other. The election of both these gentlemen, who are present here to-day, will be submitted to you for confirmation.

In concluding my remarks I would like to express my gratitude to the commanders, the officers and the engineers of the fleet, and to their subordinates, to our agents, and our employees all over the world for their loyal co-operation and help to the board in carrying on the work of the company. We are a band of brothers, and pulling together as we do, we shall, I am convinced, hold our own. He moved the adoption of the report and accounts.

Lord Balfour of Burleigh seconded, and it was carried unanimously.

The dividends recommended were declared, and the retiring directors and the auditors having been re-elected, resolutions were passed increasing the capital of the company by the creation of £205,000 new deferred stock and authorising its distribution to the deferred stockholders.

A vote of thanks to the chairman, directors and staff concluded the proceedings.

BRITISH CELLULOSE AND CHEMICAL MANUFACTURING COMPANY, LIMITED.

THE DIFFICULTIES BEFORE THE COMPANY.

CHAIRMAN OPTIMISTIC OF THE COMPANY'S FUTURE.

The second ordinary general meeting of the British Cellulose and Chemical Manufacturing Company, Limited, was held, on the 9th instant, at the Cannon street Hotel, London, Sir Harry McGowan, K.B.E. (chairman of the company), presiding.

The secretary (Mr A. E. Showell, F.C.I.S., F.S.A.A.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—I must say I am astonished that critics, the Stock Exchange, and apparently some of the shareholders of the company, should have been surprised that our operations to June 30th last resulted in a heavy loss. It seems to me that this shows a misapprehension arising from an inadequate appreciation of the nature and conditions of our great enterprise.

It will be remembered that our large issue of capital was made under the terms of a prospectus bearing date March 1st, and the capital was not paid up in full until April 28, 1920. We derived no advantage from the new capital in the period under review, except a small sum for interest during the last few weeks of our financial year. The prospectus explicitly stated that a part of the money was to be used to discharge the liabilities of the old operating company, and, if you will turn to the profit and loss account on the liabilities side of the balance-sheet, you will see that the largest item of loss is £96,821 5s 1d, which is for interest on old loans and liabilities paid off out of the proceeds of the new capital issue. And the other debits against revenue account are almost entirely due to the cost inherent in holding a large factory idle, or nearly idle, for the greater part of the year.

I should like every shareholder to understand quite clearly that at the date of the share issue our enterprise consisted of a very large factory housed in a range of many buildings completely equipped for the manufacture of that wonderful substance—cellulose acetate.

DREYFUS METHODS.

The foundation on which this company stands is the Dreyfus methods for manufacturing cellulose acetate. With the production of cellulose acetate of good quality at a low price a vast new field of industrial enterprise is laid open.

The first use to which this process was put was to make a dope for aeroplanes and airships.

But before the end of the war we knew that no business could "live" out of aeroplanes or airships, at any rate for years to come.

However, we turned our attention to the next use with two great advantages that did not exist when the works were first started. We had proved that our foundation was sound, that the material from which everything must flow could be, and was being, made in large quantities at reasonable costs and of good quality. We had also proved our ability to apply this product to a saleable article—dope.

"DOPE AND SILK."

We came to the conclusion that the next application that promised the largest amount of business and certainty of profit was artificial silk. We started experiments, and eventually designed a small plant that produced silk which was satisfactory not only to our own experts, but to those who have since become our customers. With the knowledge gained from this plant and the increasing knowledge by then acquired of how to manipulate our material, we were satisfied that we could design and work a large plant to give us the output of nine tons referred to in the prospectus by the end of this year.

Now, carry your minds back to the position last spring. We had a large works which had been turning out immense quantities of material and employing a large staff—managerial and chemical—a large maintenance pay roll and a large production pay roll, and it is obvious that, whatever course we took, such a large concern would certainly lose money during the pause between dope and silk.

Our views were that the pause would not be so great or the loss so large as not to be soon wiped out by the profits accruing from the manufacture of silk. We, therefore, decided to keep on a large nucleus staff, thus, certainly, with our eyes open, increasing the loss, but, as we hoped, reaching the profit-earning stage sooner.

Whether we should show a satisfactory report or not depended on our silk being turned out according to our time-table, and any delay, as you see, would have a double effect, for not only does the loss continue, but no profit is made to wipe it off.

Delays have occurred, serious delays, and it is the cause of these delays that will determine whether you are to-day disappointed only or discouraged.

STRIKES AND THEIR RESULTS.

In the first place, the strikes and their effect on production, which have so interfered with the country's progress, have accounted probably for four to five months' delay in delivery of plant, despite our greatest efforts to obtain better results.

This, I submit, is a cause beyond our control. Much better progress is being made now, and our equipment looks like being complete by the end of March.

Now for the difficulties within our own control. We found when we came to work our new, and, if I may use the term, full-sized plant, that what was apparently satisfactory on the experimental unit was not perfect in the full-sized plant, and that improvements incorporated therein were later capable of further improvement. Surely, you will say, as experienced men of business, you made some allowance in your estimates for these teething troubles, that one knows always occur. Of course we did, but like many better men before us, we did not, as events have turned out, make enough, and here was our mistake. We had underestimated the difficulties of starting this new application of our cellulose acetate.

It is not that the difficulties have been new and unexpected so much as that they have taken longer to overcome than anticipated.

You must remember that we are dealing with a new factory and a new basic material, involving new processes and plant for its manipulation, and, what is more, from the size that the war left our undertaking, we were forced to do it on a gigantic scale.

It is no child's play when working against a time limit to convert eight or nine tons per day of cellulose acetate into marketable products worth, as they will be, many millions of pounds per annum.

The difficulties, partly chemical and partly mechanical, being the expected ones, are not alarming, and they are slowly but surely being overcome, but the time taken to do this is disappointing, and imposes a heavy strain and anxiety on your staff.

Finally, of course, our difficulties, as we expected, are all exaggerated by the fact that our workpeople are all new to the trade. This, however, is only a passing trouble, and not more serious than we anticipated. The position is that any moment may show the last of our difficulties cleared up, and then it is only a question of overcoming the vastly easier problem of training workpeople and getting a large works into smooth running order. From that moment we should increase our output steadily and automatically. We feel we are very close to that achievement.

COMMERCIAL ADVANTAGES OF COMPANY'S PRODUCTS.

In speaking thus, I have in mind a first output of commercially saleable silk to the amount of half to one ton per day. From that day forward our success is assured, and we shall steadily increase our output in accordance with our programme. You will grasp the fact that until one ton a day is reached we shall be losing money, and that the present financial year, therefore, will include a certain number of months during which we shall have made a loss, not a trading loss, a loss rather caused not by making silk unprofitably, but by not making silk enough.

We think, in short, that when we meet you next year we shall be able to report that your business is firmly established and a proved success.

So far, I have dealt with the troublesome side of our undertaking. There is a much brighter side. The last six months have brought to light many very encouraging facts. It appears that our product has qualities hitherto unknown to us that greatly increase its value.

We have discovered that its insulating properties are several times greater than that of natural silk—a character that opens vast fields for use in the electrical industry; its feel is far more nearly that of natural silk than any hitherto marketed artificial silk; its elasticity equals that of the natural article, and in many important qualities it is superior to all other artificial silks. As far as dyeing is concerned, when the dyers come to use it they will find it as amenable as any other material to dye treatment.

In our artificial silk alone we have the foundation of a splendid business, but our cellulose acetate is a much more wonderful substance than one limited to silk. From it, and from its components, can be established a number of businesses in themselves, the future of which it is almost impossible to estimate.

POSSIBILITIES OF CELLULOSE ACETATE.

We have the largest calcium carbide plant in this country, and, subject to Central European competition, see no difficulty in disposing at any given time of any surplus there may be after providing for our own requirements for the making of cellulose acetate.

Our aspirin plant is sufficiently large to render the country independent of foreign supplies, and of a quality that has not, we believe, been excelled by any country.

Cellulose acetate can be turned into the following additional marketable products, viz. :—

I. Non-inflammable celluloid.
II. Non-inflammable films.
III. Spondite—a substitute for glass.

I should like to refer to an item in our balance-sheet, viz., goodwill and patents, £1,884,000. This figure does not in the least affect our position to-day so far as producing silk and making a profit is concerned. Its value, as you will realise, depends entirely on whether our confidence in the profit-earning capacity of the company is justified, but its presence plays no part in making the company a success or failure.

Sir Phillip G. Henriques seconded the motion, which, after a long discussion, was carried.

BRITISH GLASS INDUSTRIES, LIMITED.

LARGE PRODUCTION FIGURES.

CONFIDENCE OF THE BOARD.

The first ordinary general meeting of the shareholders of British Glass Industries, Limited, was held, on the 8th instant, at Winchester House, Old Broad street, London, Mr C. Williamson Milne (the chairman of the company) presiding.

Mr C. G. Bowyer (joint secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman said that the rate of earnings of the combined companies for the past nine months of this year before payment of imperial taxes considerably exceeded the estimate given in June of £600,000 for the year. In the very short period which had elapsed since the two new factories at Canning Town and Charlton commenced operations they had produced no fewer than 15 million bottles.

MEETING FOREIGN COMPETITION.

As to foreign competition, the glass trade, or at any rate the bottle section of it, which constituted the largest proportion of their output, was in a more favourable position than the majority of other industries. They had plenty of orders on their books, and they were regularly coming forward in satisfactory quantities, and at fair, remunerative prices for the coming year, despite very strenuous competition from the Continent and elsewhere. As they reduced their costs of production they reduced their prices. There was not the slightest doubt that the standard bottles they were now producing compared most favourably with anything offered by any of their competitors. In a very few weeks they would possess at Canning Town and Charlton two of the best equipped automatic glass factories in the world, which, owing to their good geographical situation, were in a better position than those of any of their competitors for dealing with the export demands of the world.

The chemical, optical, and illuminating branches, Webb's group, were not in such a fortunate position as regards foreign competition, because, although they had made great strides during the war, and it was generally conceded that their quality could not be surpassed, yet it was imperative that their efforts should be fostered by the Government in the shape of inclusion in the Key Industries Bill. The directors confidently believed that the Government would afford the support needed.

The costs of the erection of the two modern factories at Canning Town and Charlton had very much exceeded the original estimates, owing to the frequent advance in wages and the accompanying increase in the cost of material. The board deemed it advisable that capital and revenue should be kept distinctly apart from one another, and that the capital charges should be provided for out of capital. The total amount required for the whole of the work was £325,000, and when the time was opportune it would be desirable and necessary to make an issue of debentures or preference shares.

The confidence the directors themselves had in the future of the company was shown in the fact that they and their personal friends had always held, and still hold, a preponderating interest in the shares of the company. He had heard it rumoured that there had been inside selling of the shares, and he wanted to give an emphatic denial to that statement so far as the board or their friends were concerned.

BIG INCREASE IN SALES.

Mr G. E. Alexander, O.B.E. (managing director), said that as regards the future of the company he was brimful of optimism. In the nine months ended September 30th the sales of the United Glass Bottle Manufacturers amounted to £1,409,658, compared with £779,000 in the previous year of 1919, which was also a good year. The actual contracts on the books of the United Glass Bottle Manufacturers were for practically one million gross (144,000,000) bottles. That meant very nearly the whole of the output for next year.

The resolution for the adoption of the report and accounts having been passed unanimously, the Chairman, replying to some questions raised in the course of complimentary remarks made by the shareholders, said that the next meeting, dealing with the accounts to March, 1920, would be held, he hoped, before the summer holi-

days. As to the fall in the price of the shares, some of the shareholders had been frightened out of them by ridiculous rumours, and it was conceivable that others in times of stringency like the present had found it necessary to place shares upon the market. Arrangements could be made for shareholders to visit the works in parties. As to any further interim dividend, he asked the shareholders to exercise patience. At present the money market was stringent, and as had been indicated, it might be necessary to make an issue at a later date, probably not exceeding £750,000, and he did not want the shareholders to think the directors were anxious to dissipate that sum at once in payment of dividends. His advice to them was to stick to their shares, and when they got an opportunity at the present low price, to average.

The resolutions re-electing the retiring directors and auditors, and proposing hearty votes of thanks to the staff and to the chairman and directors, were all passed unanimously.

SHOWELL'S BREWERY COMPANY, LIMITED.

A SATISFACTORY YEAR DESPITE DIFFICULTIES.

The annual meeting of shareholders of Showell's Brewery Company, Limited, was held, on the 9th inst., at the Grand Hotel, Birmingham. Mr James Davenport, chairman, presided.

The Chairman, in moving the adoption of the report and accounts, which proposed a dividend of 25 per cent. on the ordinary shares, and the addition of £10,000 to the reserve fund, said the balance-sheet figures, bearing in mind the reorganisation of the capital in May last, showed some important changes. Taking the liabilities side, the ordinary share capital had been increased from £5,000 to £80,000, bringing up the total share capital to £425,000. The debenture capital remained unchanged, though he might tell them that included in the trade investments were some £26,000 of the company's own debentures, which they had had an opportunity of acquiring at what seemed to them to be an exceedingly low valuation. These debentures had not been cancelled, but were held by the company as an investment. It seemed sound finance to them to acquire this debt at the heavy discount at which the debentures were offered to them, and if further debentures were offered on what they considered advantageous terms, they would probably take them. Sundry creditors and reserves were some £10,000 higher at £236,884. Their internal reserves were included under this heading. The question of E.P.D. had not yet been settled, and full provision for any possible claim was included in the item. Their ordinary trade creditors showed no material increase, and the larger part represented internal reserves which might or might not be needed. If they approved the directors' proposals the reserve account in next year's balance-sheet would be £40,000. He hoped they might all live to see this grow to an even more substantial sum.

On the assets side they would observe very considerable additions to the value of their various properties. The freehold, copyhold and leasehold properties at £590,808, compared with £453,151 a year ago, an increase of £137,000. The balance of the increase of properties arose from sundry additions, which, with their increased resources, they were able to make. He did want to make it clear that these increases in the property account were real increases, and not in any sense a writing up of book values. They still held £130,000 of Government stocks. Sundry debtors were £1,600 lower than a year ago, while the cash at bank amounted to the comfortable figure of over £54,000. The profit of the year after payment of debenture interest, and providing for taxation and other contingencies, was £41,613, as against £45,878. They looked at the results taking everything into consideration as perfectly satisfactory.

Mr J. J. Calder seconded the report, which was adopted.

EAGLE OIL TRANSPORT COMPANY, LIMITED.

PROPOSED INCREASE OF COMPANY'S TANKER FLEET.

The meeting of preference shareholders in the Eagle Oil Transport Company, Limited, was held on the 6th inst., at Winchester House, Old Broad street, London, to consider a resolution modifying their rights.

† *Branches of* THE BRITISH BANK OF SOUTH AMERICA, LIMITED.

Mr John Purdy (the vice-chairman) presided, and in moving the resolution, said: This agreement has been confirmed by the ordinary shareholders at a meeting which has just been held. Up to the end of 1919 your dividend participations were limited, so that out of the divisible profits you first received 6 per cent. on your shares, after which the ordinary shareholders received 6 per cent. on their holding. Of any profits then remaining for division you participated equally with the ordinary shareholders up to 8 per cent., the remainder of the profits, if declared as dividends, going to the ordinary shareholders. So far the ordinary shareholders have not received more than 8 per cent.

Under the agreement which you are to-day asked to ratify you will first of all receive 6 per cent., which, in any case, is guaranteed by the Mexican Eagle Company, and then, after this 6 per cent. has been paid, you and the ordinary shareholders share the divisible profits until you have received a total of 8 per cent., which is the maximum dividend payable on the preference shares. In other words, until you have received your full participation of 8 per cent., the ordinary shareholders can only get 2 per cent. on their shares.

In consequence of the enormous growth of the oil industry throughout the world, and particularly in view of the tremendous developments in the production of oil in Mexico, tankers are scarce, and our charterers have asked us to put in hand a very big building programme. We estimate that the total requirements of new tonnage to meet the needs of our charterers, over and above your original fleet, will entail an expenditure of some £10,000,000.

In order to provide this sum we are suggesting that our ordinary capital be increased by £2,000,000, which amount our charterers have agreed to subscribe. In addition they have agreed to take up at par a maximum of £5,000,000 of short-term notes, bearing interest at the rate of 7 per cent. per annum, although we shall probably not call upon them for more than £4,000,000. These notes, unlike debentures, will not be a charge upon the assets of the company, the holders being in the same position as an unsecured creditor. These measures will give us a total of £6,000,000, and the difference between this figure and the £7,500,000 previously referred to will be provided by the depreciation set aside out of the earnings of the vessels.

With a fleet of 40 vessels, including those already delivered, costing in the neighbourhood of £12,000,000, the depreciation, which will be set aside at the rate of 5 per cent. per annum on the cost of the vessels, becomes a big factor. It is this depreciation which will allow us after the vessels are paid for in full to repay the short-term notes, and the result will be that the company will in a few years' time be in possession of a very large fleet of modern vessels, costing, as I mentioned previously, about £12,000,000, while the total share capital of the company will only be £5,000,000, represented by £3,000,000 ordinary shares and £2,000,000 preference shares.

The resolution was carried unanimously, and at a subsequent extraordinary general meeting resolutions were passed increasing the capital and altering the articles.

SPIES PETROLEUM COMPANY, LIMITED.

COMPANY'S INTERESTS IN TRINIDAD.

The ordinary general meeting of this company was held, on the 6th inst., at River Plate House, London, Mr G. Grinnell-Milne presiding.

The Chairman, in the course of his address, said: We were unable to put before you any accounts. After warning from the British Mission, all our British staff were taken from Russia. Only once since then have we heard, by letter, dated March 3rd, and we are consequently not only without details of figures, but without any information to give you as to conditions there. On the other hand, you may, I think, with us, feel no anxiety as to what has taken place there. The great question in your minds, no doubt, is: When and how are we going to get back the property? I am unable to give you a very definite answer. We anticipate, however, that when commerce goes on between Russia and this country, our property will come back to us.

In these circumstances we have turned our eyes to certain opportunities which have been offered to us in the West. We are well aware that all over America there are fields—some of them untried—some of them more or less proven—from which great quantities of oil may be expected to be taken out in the future, and we have, therefore, given our attention very much to those opportunities. The whole range of the West is before us, and other people, to look into and to examine. Both North and South America show very interesting fields, but to us the most interesting from the first has been Trinidad. We have excellent options on it. We have on the spot in Trinidad an expert of world-wide reputation, so that he may make a full report on such portions of the areas at our disposal as will be found necessary before taking any action. We have decided to send out Mr Trew as head of our mission, and Mr Dabell. From Trinidad they will go on to America. What we anticipate is that we shall be able, in the period at our disposal, to examine a considerable number of propositions which have been put before us.

We do not anticipate any difficulty, when it comes to financing this business, in getting the requisite funds. If, therefore, these properties turn out to be anything like we expect, we shall be ready to face the music and to raise the money. We shall only be doing what other people have done with very great success in turning to the West. We shall endeavour, while preserving in every way and working our properties at Grosny, and carrying out to the very last moment our claim for indemnity from the Bolsheviks—which is a very large amount, and has been fully appreciated by our Government Departments, to whom we have applied from time to time—to do good new business in the West.

The report was received and adopted.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3¼% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4½% on Nov. 6, 19.9, and 5¼% on April 15, 1920. *Changed from 4¾% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

Total value of imports of gold.....	734,036	Total declared value of exports registered in the week	1,675,682

Samuel Montagu and Co. write as follows on December 9th :—

GOLD.

The Bank of England gold reserve against its note issue is £124,074,285, an increase of £906,750 as compared with last week. A fair amount of gold came into the market this week, and was all taken for New York. Gold to the value of $8,200,000 is reported as having been received in New York from London. We understand that the Netherlands East India produced in 1919 (from four quartz mines in Western Sumatra and three mines in the north of the island of Celebes) 92,600 ounces of gold, as well as 1,006,800 ounces of silver. The bulk of the last-named metal came from Western Sumatra.

SILVER.

After a short reaction upward of ⅜d on the 3rd inst., the heavy tone of the market again reasserted itself, and prices fell daily. The descent has been retarded by bear covering, and orders for shipment this week to India. The bear account of the Indian bazaars has now been largely liquidated, so that one steadying factor is eliminated. China operated both ways during the week, more as a seller than a buyer. A notable feature during the last two days has been the lack of backbone in the market of the United States, where banking difficulties in Dakota connected with wheat operations probably created uneasiness. In any case, the fact that the U.S. silver quotations have ruled at times under the London parity is a disquieting symptom. Unfortunately for the prospects of silver, a fall in the price of the metal (and of China exchanges) does not, in the present conditions of Western trade, increase to any material extent the effective demand for Eastern commodities, for the very good reason that the West has not the wherewithal to pay either in sufficiently cheap goods or in cash. Meanwhile, the anæmia which now afflicts silver must run its course until commodity markets right themselves, and its alleviation is not assisted by the circulation of rumours presaging a possible abrogation of the Pittman Act in the near future. The price for cash to-day—39¾d—is the lowest quoted since July 30, 1917 (39⅝d). At that date silver was not quoted for forward delivery. It is stated that the new silver currency of the United Kingdom (500 instead of 925 parts fine in the 1,000, the authorised quality since the reign of Queen Elizabeth) will shortly be available for issue. This is the most radical change in our currency since the establishment of the gold standard, though, of course, far less important as to its effect upon this country and upon the world at large. Its influence, however, will permeate abroad, for it is a clear indication that, in the opinion of this country,

the intrinsic value of subsidiary coinage is not of vital consequence so long as the material used is suitable. The employment of precious metal for the purpose is a mere survival of bi-metallism, which has been abandoned by every country in the world. Dr Thompson, M.P. for the Yukon, states that the recent discoveries of silver in that territory will make silver mining one of the most important industries there. From further information obtained on October 19th last, we understand that from 1,800 to 2,400 kilograms of silver were utilised daily by the Mexican Mint for coinage. The amount varied according to whether $150,000 in 50 centavos or $200,000 in whole peso pieces were produced. The present rate of working would, therefore, absorb about 20,000,000 ounces per annum out of a probable production of 80,000,000 ounces. The present issue of coins contains 12 grammes pure silver in the peso, 6 grammes in the 50 centavos, and 2.4 grammes in the 20 centavos. The fineness of the coins is 720/1,000.

Indian Currency Returns.

Reports and Notices.

Sir Thomas Lane Devitt, Bart., has resigned the presidency of the Equitable Life Assurance Society, and Sir Evan Spicer has been elected in his place. Sir Thomas Devitt has been president of the society since 1912, and remains a member of the board of directors.

Mr Herbert Hill (joint managing director of John Cooper and Sons (Beehive), Limited) has resigned his position as joint managing director of Ekins, Son, and Percival, Limited, of Wellingborough.

The Earl of Portarlington has joined the board of Thornton-Smith, Limited.

Mr William P. Rutherford, the managing director of the Tharsis Sulphur and Copper Company, Limited, has also been appointed chairman of the directors, in succession to the late Lord Glenconner.

GOVERNMENT STOCKS, &c.

COLOMBIA (CONSOLIDATED EXTERNAL DEBT).—The Council of Foreign Bondholders have received the December instalment of the debt service in respect of the half-year ending December 31, 1920.

ASSURANCE.

CITY OF LONDON RE-INSURANCE COMPANY, LIMITED.—Mr Leonard H. Brading—who for the last six years has been marine underwriter to the Motor Union Insurance Company, and, in addition, for a slightly shorter period to the United British Insurance Company and the British and Commonwealth Insurance Company—has been appointed marine underwriter to this company as from January 1st next.

BANKS.

COMMERCIAL BANK OF SCOTLAND.—The net profit for the year to November 1, 1920, after providing for rebate of discount and interest and for bad and doubtful debts, was £302,039 plus £52,631 brought forward, together £354,671. The directors recommend a dividend for the second half-year on "A" shares at the rate of 14 per cent. per cent. per annum, subject to tax, dividend on "B" shares at the rate of 10 per cent. per annum, subject to tax, applying to depreciation of investments £100,000, to officers' retiring fund £25,000, in reduction of cost of properties £20,000, carrying forward £52,171.

CONTINENTAL GUARANTY CORPORATION.—We have received the following balance-sheet from the Continental Guaranty Corporation of New York, a bank organised some five years ago to furnish a specialised service to the engineering, motor, and allied trades:—

BALANCE-SHEET, June 30, 1920.

EQUITABLE EASTERN BANKING CORPORATION.—The Equitable Trust Company of New York has announced the formation of a new banking corporation, to be known as the Equitable Eastern Banking Corporation. The company will be capitalised at $2,000,000, with a surplus of $500,000. The Equitable Eastern Banking Corporation will assume the Far Eastern representation for the Equitable Trust Company of New York through its Shanghai office. Banks represented among the incorporators are: Mercantile Trust Company of San Francisco; North-Western National Bank of Portland, Oregon. Another bank included among the stockholders is the Citizens' National Bank, Los Angeles, California. The New York offices of the Equitable Eastern Banking Corporation will be located at 37 Wall street, New York.

YOKOHAMA SPECIE BANK.—The gross profits for the half-year ended June 30, 1920, including 3,872,394 yen brought forward, amount to 150,395,803 yen, from which 135,968 557 yen has been deducted for interest, taxes, current expenses, rebate on bills current, bad and doubtful debts, bonus for officers and clerks, &c., laving 14,427,246 yen for appropriation. The directors propose that 6,000,000 yen be added to reserve, and recommend a dividend at the rate of 12 per cent. per annum, absorbing 3,982,400 yen, carrying forward 4,444,846 yen.

MISCELLANEOUS.

BLAENAVON COMPANY.—The profits for the year ended September 30, 1920, were £219,489. Deducting provision for reserves and renewal funds £34,997, reserve for taxation and contingencies £50,000, and loss on coal sold to workmen, supplied under cost of production, £38 194, there is left £96,298. Interim dividend on ordinary shares absorbed £33,500. Balance brought forward, after paying preference dividend for year ended June 30, 1920, and ordinary dividend for year ended September 30, 1919, is £67,727, making

(a) Including arrears. † Free of tax.

£130,525. The directors propose to pay on December 31st a final dividend on the ordinary shares at the rate of 7½ per cent., less tax, making 12½ per cent. for the year, leaving £80,275 to be carried forward. During year all redemptions of debenture stock required by trust deed have been made.

BRITISH INDIA STEAM NAVIGATION.—The report for the year ended September 30, 1920, shows, after providing for depreciation, an available balance (including £22,188 brought forward) of £184,898. A dividend of 8 per cent. (less interim) and special bonus of 5 per cent. (both tax free) on shares is recommended, carrying forward £25,462,

LONDON SCOTTISH AMERICAN TRUST.—The gross receipts for the year to October 31, 1920, totalled £114,063, and £21,275 was brought forward, making £135,338. Deducting interest on debenture capital, income-tax, management expenses, &c., there remains £72,447, of which £1,748, being balance of profit on realisations, has been carried to capital reserve. Dividend for second half-year on deferred stock at rate of 10 per cent. per annum (making 8 per cent.) is recommended, carrying forward £26,949.

MINES.

VAN RYN GOLD MINES ESTATE, LIMITED.—The report for the year ended June 30th last states that the net profit from all sources amounted to £87,307, which, with the balance brought forward, £37,661, makes a total available profit of £124,968, which has been appropriated as follows: written off for depreciation, £16,471; in payment of dividend No. 32, £37,500; and dividend No. 33, £37,500, leaving a balance to be carried forward of £33,497. During the year 408,430 tons of ore were crushed and treated, yielding 98,197.45 fine ounces of gold, which realised £503,248, equivalent to a recovery value of 22s 3.359d. Working expenditure amounted to £398,425 (19s 6.121d per ton), leaving a working profit of £104,823. Comparing these results with those of the last financial year, 7,570 tons more were crushed; gold realised shows an excess of £100,462, and working expenditure was increased by £57,402, resulting in an increase in the working profit of £43,060. The appreciation in the value of gold realised is due largely to the increased price at which the company has been able to sell its product as the result of the establishment of a free market in gold since July 24, 1919. The payable ore reserves at the end of the financial year, calculated at the standard value of gold, amounted to 1,147,170 tons, of an average value of 5.6 dwts, over a stoping width of 48 inches. Based on a valuation more closely in accordance with the present value of gold—the figure taken being 115s per fine ounce—a further 439,800 tons, of an average value of 3.6 dwts, are automatically brought within the limit of payability, thus increasing the ore reserves, under present conditions, to 1,586,970 tons, of an average value of 5 dwts over 90 inches. As heretofore, no credit appears in the balance-sheet for these reserves, the cost of which has been met out of past profits.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions continue favourable for outdoor farm work, and autumn sowings are almost completed. In some districts the area seeded is considerably larger than at this period last year, but it is yet difficult to form a reliable estimate of the total acreage planted, though same would appear to be fully up to average of last season. Threshings of native wheat continue on a liberal scale, but offerings at the chief distributing centres consist largely of damp and inferior samples. With ample supplies available only finest lots bring the maximum price, millers being evidently well stocked at the moment, while holding off in anticipation of a further reduction in prices of the imported variety, which also moves off slowly at late rates. Flour still meets with quiet support, bakers purchasing only to cover immediate wants owing to a possibility of future requirements at a still lower price level. English G.R. grade quoted 82s ex mill, and imported ranges from 76s 9d to 89s per 280 lbs, ex store. Maize firmer in sympathy with higher forward offers. Plate, ex ship, quoted 56s 6d to 57s, ditto landed 59s to 60s; white flat African, 62s; and Galatz-Foxanian 60s per 480 lbs, landed. In the forward market prices were advanced owing to a better Continental inquiry, and estimated lighter Plate shipments. Cargoes of Plate, afloat, sold 56s 6d, December-January 56s; American mixed, January shipment, at 53s. Parcel trade fairly active, with prices firmer, but attended by some irregularity. Plate, December-January, and January-February, sold up to 54s 9d per 480 lbs. Oats firmer, with an improved demand. English ranges from 48s to 54s per 336 lbs. Of imported Plate clipped sold 46s 6d, Black Irish 47s, white American nominally 45s, No. 3 Canadian 47s 6d, and Norwegian 59s to 60s, landed, per 320 lbs. Forward positions also firmer, though closing quiet. Danubian, f.a.q., afloat sold 36s 6d, No. 2 Canada Western afloat 43s, and River Plate f.a.q., January-February, 36s-37s to 36s 6d. Barley quiet, but steady. English malting rules from 65s to 105s, grinding, ditto, 50s to 75s; Californian, ex ship, 78s to 95s; Australian, ex ship, 90s to 95s; Morocco, landed, 75s to 81s per 448 lbs. American malting, 64s, ex quay; American feed, ex ship, 52s 6d; and Plate, landed, 65s per 400 lbs. Only small sales occurred on c.i.f. terms to outports. Beans dull at about late rates. Peas steady, but slow. English Maples, 75s to 95s. Dunns, 65s to 80s; small blues, 85s to 100s per 504 lbs. Oatmeal easier. London made, all cuts, £31; Scottish, £32 10s to £40, and imported £32 10s per ton. Lentils remain steady. Homeward grain freights were again easier, the limited amount of chartering being chiefly on Continental account. Steamers to load maize from River Plate upper ports were taken to U.K./Continent at 47s 6d, with option of unclipped oats from Bahia Blanca at 57s 6d; Mediterranean 5s per ton extra. Heavy grain from American Northern Range ports established 8s per qr to U.K., 8s Hamburg/Bremen, the latter showing a decline of 2s per qr. Gulf to Hamburg or Rotterdam paid 8s 6d, Northern Range to Spanish Atlantic 10s, Spanish Mediterranean 10s 6d, West Italy 10s 6d, with Gulf loading at 1s per qr extra respectively. Rates from India have further given way, and 42s 6d was established for wheat from Karachi home scale basis. Australia rather steadier, and 105s is now indicated for new season's loading to U.K., with options. Time charter business slow, and rates largely nominal with an easier tendency.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

Burglars attacking a safe with the Oxy-acetylene Blowpipe

Sooner or Later the Test will come—

IF *your* Safe were attacked to-night, would it withstand the most deadly of all safe breaking implements—the Oxy-acetylene Blowpipe?

A skilled man using this weapon can cut through mild steel 17" thick in 15 minutes, and the risk of every possessor of a safe from burglars using this apparatus has increased a thousandfold since the war—as an enormous number of men of all classes became proficient in its use whilst engaged in the production of Munitions of War.

Numerous authentic cases are on record where THE CHATWOOD SAFE has been attacked by expert burglars using this weapon. On every occasion The Chatwood Special "Intersected" Steel has resisted all efforts to penetrate its impregnable defences.

Take the first step to contented security *to-day*—send a card now for The Chatwood Safe Book.

Fire Proof Since 1858. **THE CHATWOOD SAFE** *Burglar Proof Since 1858.*

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says :—Conditions in the iron and steel trades have been very much mixed this week. It is a singular feature of existing circumstances that while pessimism seems to hold the field, shipbuilding, engineering, and relative connections are fairly well off for work, and are not badly provided for ahead, say, for six to nine months. There is a very large volume of tonnage in steel and iron manufactures being still turned out, and there is, comparatively, a big total yet to finish off; but it has to be recognised that the outputs are greater than the intakes, so that the balance as disclosed on the surface is adverse. Experts, however, maintain that there is a big lot of new work (assured orders) being held in suspense, and which must come out sooner or later, the period depending on who (buyers or sellers) can hold out longest. Consumers advise that the general price situation would be sensibly eased by a reduction in the cost of pig-iron, of which, however, there is no sign, and according to authorities cannot be so long as the supply of the raw article remains as restricted as it is. Further arrivals of pigs (over 2,000 tons this week) are announced on the East Coast from Belgium, but that quantity does not count for much. Of bar iron, plates, sheets, and other sections, several thousand tons have been unshipped from Antwerp, and large amounts are on the way. These arrivals have no doubt weighed with bar makers, who on Monday intimated a drop of £2 10s, making crown quality £27 10s a ton. This time last year the rate was £22 10s, and in May it touched £30 a ton, delivered stations in Glasgow. On old contracts works are still well employed. One or two steel works have this week discharged some 200 men, following on the shutting down of rolling mills. With a view to helping forward the export trade in coals, Scotch coalmasters have lowered their quotations for deliveries to allied countries by 20s a ton. For dross and duff shipment rates are down 10s a ton, and those for bunkers 5s.

Our Sheffield correspondent writes :—A complete cessation of buying, except very limited quantities for current consumption, characterises nearly all the branches of the steel trade. The financial stringency also becomes more acute, and threatens the stability of many leading houses. Recent cancellations of orders for Australia and the East, as well as France and Italy, represent a very large volume of business. Firms which six months ago had nearly a year's work on their books are now without orders. Everybody in trade appears to be marking time as regards the placing of new work. Half the open-hearth steel furnaces are standing. British basic billets have come down to £18 10s delivered, whereas Belgian and French material can be bought for £14 10s. For some purposes consumers prefer to pay £20 or more for Sheffield-made billets by reason of their superior quality. The output of pig-iron is small, and prices are irregular, and tending downwards, but there is no buying. Some Continental pig is coming into the country. Prices of wrought iron are being maintained, the limited output just about meeting consumption. The railway steel branches are busy, although orders tend to shrink. The South American railways are placing heavy contracts for stores to cover the ensuing 12 months. There is a big demand for tools used in shipbuilding, mines, building, and general trades of the country. Some descriptions of engineers' hand tools cannot be produced in sufficient quantities. The state of the exchanges militates against a revival of business, but a good many orders would be released if steel makers would take steps towards the stabilisation of prices whereby consumers would know that the bottom or thereabouts of decline had been reached. With a somewhat reduced consumption, the present output of fuels only just suffices for the demand, stocks being readily absorbed. No move has been made yet in the direction of resuming exports. Steam nuts are in short supply. Gas fuels are moving freely, while the demand for small fuels is distinctly slow. The house coal trade is more active. Current prices per ton at pits are :—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; steam nuts, 31s 2d to 32s 2d; best hard slacks, 28 8s to 28s 11d; small slacks, 23s 2d to 24s 2d; best Tyne steam, 36s; branch, 37s 2d to 37s 8d; Silkstone, 33s 8d to 34s 8d.

Our Middlesbro' correspondent's report, dated December 9, 1920, is as follows :—Pig-iron : Although reductions in the price of pig-iron have been made in other districts, our makers have had no reason to cut their prices yet. They have no difficulty in finding consumers for all the foundry pig-iron they can produce. On the other hand, stocks of forge qualities are accumulating. The position of East Coast hematite is unchanged. Makers have sufficient orders for all their prompt iron from local works There is no foreign enquiry now. Prices remain at 225s for No. 3 and No. 4 Cleveland foundry pig-iron, and 260s for East Coast mixed numbers hematite for home consumption. Manufactured Iron and Steel : Although the price of bar iron has been reduced by £2 10s, there is no change in steel prices. A reduction, however, would seem to be inevitable at no distant period, in view of the prices quoted by foreign competition. Steel ship plates, home, £24 10s; steel ship angles, £24; iron ship angles, £28 5s; iron bars, £27 10s; steel rails, £25 net. Iron Ore : The downward tendency in freights naturally causes consumers to delay accepting tonnage as long as possible, and as they have generally got good stocks on hand, they are by no means anxious about forward supplies yet.

MANCHESTER, December 9.

There has not been any increased activity in the market during the week, and in certain sections the tone has been quieter than ever. There are many adverse factors in the situation at the moment, which have the effect of restricting trade, and there is no probability of a larger turnover until there is more stability in raw cotton prices, and an improvement in foreign exchange rates. Very few bids have been met with in cloth for India, and the further decline in the value of the rupee has been a discouraging development. Operations for China have been at a standstill, but some demand has been met with for Java. European and Near-Eastern outlets have given no support whatever. More manufacturers have pressed for orders. The big curtailment of production in the spinning section has not yet had time to affect the position of spinners, and a dragging demand has been reported in both American and Egyptian qualities for home use. Isolated transactions have been put through in bundle yarns for India.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says :—Pronounced depression is still the outstanding feature in the wool textile industry, and it is becoming increasingly difficult to find sufficient new orders to keep machinery running even on the short working week now in operation. A small amount of business is being done with the Continent in wool and tops, some fair weights going to Germany and Poland, but there is not enough export trade to affect prices. Values continue to decline, and discrepancies in quotations are still very great. Average 64's tops are nominally quoted at about 4s per lb, and it is significant that for 2-48's yarn out of this quality some spinners are prepared to take as low as 6s 6d per lb, although about 7s is a more general quotation. There is no improvement in the piece trade, and stocks continue to accumulate, notwithstanding a drastic reduction in prices. Members of the trade here regard with a good deal of scepticism the proposal for an Australian association to take over the stocks of wool now held by the Imperial Government.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The position of the wool textile industry is by no means good. What is happening at the various public auctions, both in London and Australia, indicates a very limited demand for the raw material, prices moving towards a still lower level. The opening of another series of sales in the former centre last Tuesday indicated that there had been no improvement, and while superfine merino combing wool has shown up a trifle better in Sydney, and good super halfbreds have made a fraction more in Christchurch than a month ago, 90 per cent. of the wool is being taken off the market unsold, or being disposed of at less money. Perhaps the auctions in London are of most interest to the trade of this country, but the limited demand and the lower prices paid clearly indicate that the trade is not in the temper to purchase much raw wool. Disappointment is being expressed throughout the entire industry that the Government have not reduced their limits. I have stoutly maintained that their policy up to a month ago was right, but the time has now come when limits should be lowered, or, failing that, all sales should be cancelled, and the home trade allowed to satisfy their requirements elsewhere at less money. It is a real waste to catalogue 9,000 bales daily, and only about 20 to 25 per cent. to be sold.

An important feature of the week is the fact that a cable has been received from Melbourne stating that a Wool Trade Conference has decided to form a British-Australian Wool Realisation Association with a capital of £25,000,000. The object appears to be to place the current Australian clip on the market, and to request the British Government to cease offering their stocks until a more favourable occasion for realisation comes. The scheme has no doubt been formulated with a view to assisting the entire industry, particularly growers in Australia, to get through the present crisis. The trade as a whole entertains serious doubts about the scheme being workable. The British Government are to be asked to relinquish control of their present stocks on a given date, the end of the year being suggested, and to agree to an equal division of the cash and assets over an appraised rate. The association will evidently control future clips, money being raised from the wool trade in the form of shares and debentures. I fail to see how such a scheme can be to the advantage of either growers or the trade in general. The existence of the law of supply and demand is apparently forgotten, also that there are large wool-producing countries other than Australia, and that if the scheme keeps the price of colonial wool on a fictitious level, the big stocks of wool and the new clips of New Zealand, South Africa, South America, and the United States will come on to the market all the same, thereby interfering with the sale of the Australian clip. A much better plan would be to try to open out trade with Central and Eastern Europe, for if the starving millions of Germany, Russia, Austria, Hungary and the Balkan States could have access to cheap textiles the present depression would be automatically solved.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

The outstanding feature of the market for oilseeds and vegetable oils is the significant lack of demand, and except for hand-to-mouth transactions, trade has been on very quiet and narrow lines. Regarding Plate linseed, prices were for some days sustained on reports of dearer Argentine options, but this had little or no effect in stimulating business. At Hull pretty considerable quantities of linseed, both from India and South America, have come to hand within the past ten days, more than sufficient for current demand, and causing an easier tendency in spot values. Crushers confronted with a very poor demand for the cake product in particular are altogether indisposed to add further to stocks, and it is this fact rather than the slowness in oil that is militating against trading in linseed. The oil product has shown signs of steadiness, and values are about unchanged on the week, but, generally speaking, the market is nervous, and symptoms of a really firm tone far to seek.

Egyptian cottonseed, after suffering a sharp set-back to £13, at which trade was done in for spot and near, reacted to the extent of £2, but has since been somewhat lower for both spot and December loading. Old Bombay cottonseed, on spot, has been dealt in at £9 10s, but near is considered worth £1 in excess of that, and rather more still for shipment. The market has been helped by a better demand for all descriptions of cotton oils, which have advanced 20s to 40s, crude and soapmaking technical being the firmer sections. Rapeseed oil is not plentiful, but is neglected, and there is little inquiry for crude soya bean oil, which is undersold by Oriental. Crushed palm kernel oil has met a good demand, and values are inclined firmer. English castor oil has been marked down by Hull manufacturers £9 per ton for all grades.

Fairly large quantities of oilseeds are on passage, viz., linseed 59,400 tons for the U.K., and 34,300 tons for the Continent; cottonseed 23,400 tons to the U.K.; and rapeseed 15,900 tons, principally to the Continent. England's soya bean commitments, however, are very small indeed, prices having been, and still are, above importers' ideas.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The weakness in the domestic hide market continues, best ox only making 7½d to 7⅜d per lb in Bermondsey on Thursday—a fall of ⅝d—to 1d. Horse dropped 2s-3s each, and many classes of calf ⅛-¼d. Wools were also weak, and sold at 3s 6d-7s 9d each, again showing substantial declines.

The demand for foreign hides has again fallen flat, and the clearances of hides at low prices seems to have left the home demand lifeless. Sales are reported of Smithfield frigorifics at 11d, c.i.f., and Anglo-South Americans at 11⅛d. The American market is cabled as weak with best packers nominally selling at 20 cents. American horse hides are now offered in best selections at $5.

The leather market is without animation, and tanners are getting a shade panicky; there is no foreign trade doing, and even with the present limited production, the domestic trade cannot absorb the current supply of sole leather. Several of the big tanners are contemplating a shut-down until conditions improve. A few 12/14 lb bends are selling, but cuts of 4d to 5d per lb are frequent, whilst offal is being offered at prices which must show a severe loss. There is little doing in upper leathers, and the glacé kid market is upset by large sales of glacé kid, which have been held by the banks, and which they have advanced upon. Prices are now nearly as low as in pre-war days, and it is time the public had the advantage in cheaper boots and shoes. The total value of imported upper leathers for the eleven months of this year amounts to £11,534,320, Germany supplying patent to the value of £233,639, and other sorts £397,738.

The boot trade is still stagnant, and short time is being worked in all the great centres. Imports of boots and shoes to end of November were valued at £2,844,866, and British exports to the value of £6,729,353.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 10.

The quiet tone governing most markets for some considerable time past became more pronounced during the week, partly owing to the advanced period of the year. There is no revival in demand for most commodities, and prices in many cases lost further ground, particularly where sellers manifested any desire to force their sales.

SUGAR.—As regards free parcels, actual trading proved of retail dimensions, but prices moved steadily. Crystallised West India sold from 66s to 72s, as to sample; white Mauritius, 79s; American granulated, 80s; muscovado Barbadoes, 47s to 50s. Liquid glucose, spot, 45s. American syrup sold quietly. Good to fine grocery, 28s to 33s; useful dark, 21s to 22s.

COFFEE.—Market remains without new feature, demand on export account being very dull, while home-trade buyers operate with certain reserve. In auction, bold Nairobi sold, 100s; Uganda, 85s 6d to 86s 6d; and fine bold hard grey Vera Paz, 152s. Futures slow; and March sold, 51s 6d to 50s 6d; May, 51s; July, 51s 6d.

COCOA.—Market still dull and depressed. Fine Grenada sold, 59s to 60s; Trinidad, 83s; Accra, F/F quality, December-February, sold, 47s, ex quay, Liverpool.

TEA.—In auction this week 42,000 packages Indian and 23,880 packages Ceylon were offered, and, with rather quieter competition, recent rates were barely maintained in the case of the finer qualities, while common and medium ruled distinctly easier.

RICE.—Market remains in the same dull state as hitherto. Rangoon bran steady, but trade is quiet. Beans steady, and spot lots quoted £13 per ton.

SPICE.—Pepper, after a sharp decline, became steadier. Fair black Singapore, spot, sold, 4½d to 4¼d; January-March, 4⅜d; Lampong, spot, done, 4½d; Aleppy, 4½d; Tellicherry, 4¼d to 4¾d; white Singapore, 9½d; Muntok, 10d; ditto, January-March, 9d to 8⅝d. Zanzibar cloves, spot, 1s 3d; pimento, sold, 3⅝d; flake tapioca, spot, 1¾d per lb; ditto, December-February, sellers, to London, at 18s; fair Penang seed pearl, spot, 22s; small sago, spot, 25s; sago flour, January-March, 17s 6d; Japanese farina, spot, 27s; January-March, 23s 6d. Desiccated coconut, fine cut, spot, 67s 6d; medium, 72s 6d.

JUTE.—This market developed a dull and depressed tone during the week, spinners being virtually out of the market. Native first marks, assortment, new crop, December-January, actual marks, to Antwerp, sold, £38, subs quoted £32, lightning actuals £27, and subs £25. Calcutta hessians flat, 10 oz, spot, sellers, 30s; 8 oz, 28s. A twills, spot, 57s; B ditto, 80s.

HEMP.—Manila steady, but there is only a small amount of business doing. J grade, December-February, quoted £58 10s; K, £49; L, sold, £48 10s; and M, £39. New Zealand steady, quiet. Points, October-December, £52 10s; fair, £50 10s.

SHELLAC.—Market very quiet, and forward positions unsettled. Standard T N., spot, 500s; off standard, 430s; March, sold, 345s to 300s, 320s, 290s.

COPRA remained in a generally slow state. F.M.S. Straits, November-January, London, sold, £48 10s to £49 and £47 5s; December-February, £47 10s to £48 and £46 10s; January-March, £47 10s to £46; ditto, October-December, Rotterdam, sold, £50 to £50 10s. Palm kernels, December-February, sold, £30 10s to £31 and £29 15s.

MENTHOL.—Kobayashi and/or Suzuki, spot, sold, 27s to 26s; January-March steamer, 17s to 16s; peppermint oil, ditto, spot, 5s 4½d; December-February steamer, 4s 6d sellers; aniseed, spot, sold, 2s 11d; and January-March, 2s 10d. Slab camphor, spot, 5s; crude, 2s 6d per lb. Japanese wax, spot, sold, 117s 6d per cwt.

EGG PRODUCTS.—General trade was again carried on slowly. Liquid yolk, spot, 95s for new season's; old, 60s; liquid whole egg, spot, 60s per cwt.; dried yolk, spot, 6d; native dried whole egg, 8d; spray, 1s 3d; albumen, spot, 4s 2d; and December-February, 3s 9d per lb.

RUBBER.—A quiet and featureless market resulted throughout the greater part of the week. Plantation standard crepe, on spot, changed hands at 1s 1½d to 1s; December, 1s 1½d to 1s 0¼d; January-March, 1s 2¼d to 1s 0⅜d; April-June, 1s 3½d to 1s 1⅜d; July-December, 1s 5d. Smoked ribbed sheet, spot, sold, standard quality, spot, at 1s 0¼d to 11d; January-March, 1s 1½d to 11½d; April-June, 1s 2¼d to 1s 1d. Fine hard Para, spot, 1s 1½d; soft fine, 1s 1½d.

OILS.—Linseed easier. Spot, net, naked, 45s; January-April, 43s. Rape quiet. Crude, spot, 72s; refined barrels, 82s. Cotton steady. Crude Egyptian, 47s; Bombay, 44s; common edible, 58s. China wood easier. Hankow, spot (barrels), 97s; and Hong Kong, spot, 95s. Coconut quiet. Ceylon, spot, 82s; November-January, 78s; Cochin, ditto, 82s. Soya quiet. Oriental, afloat, cases, 47s; barrels, 50s; deodorised, 73s. Japan fish quiet. November-December (cases), 34s. Cod liver quiet. English, spot, 32s. Groundnut quiet. English crushed, naked, spot, 70s; deodorised (barrels), 88s. Turpentine quiet. American, spot 105s; December, 105s; January-April, 105s. Rosin easy. American, grade B, 39s; F, 40s; G, 40s 6d; K, 41s; M, 41s 6d; WW, 42s; French, F/G, 39s; H, 40s; WW, 42s; extra pale, 43s. Petroleum steady. American, spot, 2s 3¼d; and waterwhite, 2s 4¼d per gallon.

OILSEEDS.—Linseed: Market dull. Calcutta, afloat, arrived, sold, £24 10s to £24; November-December quoted £25 10s. Bombay, November-December, £26 5s; Plate, afloat, Hull, sold, £21 10s; November-December, £22; January-February, new crop, sold, £23 10s to £22 15s. Rapeseed lower. Toria, November-December, sellers, £25; real bold Ferozepore, £24; brown Cawnpore, £23. Cottonseed quiet. Egyptian, black, December, £13 15s. Bombay, spot, Hull, sold, £9 10s old, £10 new; December, £10 10s. Gingelly nominal. Chinese, November-January, to Continent, £35. Ground nuts quiet. Coromandel, January-February, machine-dried, £27 per ton.

METALS.—Tin was an easier market last Monday on a fair amount of selling, early December being sold at £218 10s, and three months £225 to £222. Active buying and an upward tendency characterised movements until the middle of the week, cash reaching £226, late February being sold at £228 and three months at £230 to £228 15s, while since registered at £229 15s, and ultimately £229 10s. A further advance was established at Thursday's meeting, while cash realised £227 10s to £229 10s; late February, £230 10s to £232 10s; three months fluctuating between £231 and £233, being finally done at £232. At Friday's session an easier tone prevailed, cash selling at £223 10s; late December, £224 to £224 10s; and three months' down to £226. English ingots, £219 to £220. Copper: After manifesting a rather easier tone at the week's commencement, respecting forward dates, the standard market improved until the middle of the week, a good business being done, when end of December changed hands at £81 to £81 10s and three months £80 10s to £81 10s. A lower range was established at Thursday's meeting, offers, however, being well met. Late December sold at £80 10s to £80, and three months down to £79 15s. Values declined at Friday's session, while cash sold at £77 15s to £78; one month, £78 10s; and three months', £79 to £77 10s, being since registered at £77 15s. Electros, £89 10s to £90 10s; best selected, £87 to £88; strong sheets, £139. Lead easier at £25 15s to £26 10s. Spelter weakened at £30 5s to £31 15s. Antimony: Regulus, English, ordinary to best, £52 to £55. Aluminium: Home trade, £165; export, £185. Wire bars, £90 to £90 10s.

TALLOW.—Messrs Colchesters and Woolner write on December 8th as follows:—The tallow market was steadier during the week, but prices were mostly unchanged to-day. There is a fair demand for good beefy kinds, which it is difficult to satisfy, as there is so little of the class offering. At auction to-day 1,398 casks tallow were offered, and 249 were sold. Quotations are:—Australian mutton: Fine, 60s; good to fair, 58s to 54s; dull to the dark, 50s to 40s; hard, 58s. Australian beef: Fine, 65s; good to fair, 56s to 50s; dull to dark, 45s to 40s; sweet, 75s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 55s; and mixed, 43½, c.i.f., London, 53s. The market letter is unchanged. Town tallow, 50s per cwt. Rough fat, per 8 lbs, 7d; melted stuff, 35s per cwt. Quotations are:—Town: 43s net cash, naked, ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 45s to 40s. Bone fat: White, none; pale, 43s; benzine, 40s; melted stuff, 39s, f.o.b.

INDISPENSABLE TO BUSINESS MEN.

The Daily Telegraph.

VICTORY ATLAS

OF THE WORLD

THE VICTORY ATLAS is essential in the office. The merchant and manufacturer must know where the new States lie, and how they can be reached by sea and land. He must familiarise himself with the new countries where new Governments and new tariffs have been set up, and new coinages and weights and measures introduced, or he will be left behind in the struggle for their markets. These new countries are shown on larger scales and in greater detail than in any other atlas in existence, and in the Victory Atlas the business man can pick out the routes and distances by sea to their ports, or he can trace out the land routes to States without a seaboard. The economic inset maps will show him where raw materials such as iron, lead, rubber, wool, silk, &c., are obtainable, and the charts of the oceans, with their steamship routes and distances, will enable him to estimate the cost and time required to bring these products into the home market.

The Victory Atlas is published in three styles of binding: Cloth, with handsome gilt lettering, £7 5s.: half-morocco, with handsome gilt design and lettering, £8 15s.: full morocco, with handsome gilt design and lettering, £10 10s.

The form of binding used for the Victory Atlas is the "guard" system, which ensures every map lying absolutely flat when the Atlas is opened, and no name or detail of any kind can be obliterated from the centre. This fact alone should commend itself to many purchasers.

For the convenience of those who prefer to have the maps bound in such a way that they can be taken out and consulted separately, the Atlas is also published in a loose-leaf binding case.

As none of the maps contained in *The Daily Telegraph* Victory Atlas can be purchased at less than 2s. a copy, and considering that there are 150 full-plate maps in the Atlas, and that the cheapest form of binding costs 39s., the advantage of purchasing the complete volume is obvious.

THE
STOLL FILM
COMPANY, LIMITED
CHAIRMAN - - - - SIR OSWALD STOLL

Copies of the Prospectus may now be obtained, offering

£200,000 in £1 TEN PER CENT. Cumulative Preference Shares.

The shares have Cumulative Preference rights, and form an investment with **permanent** high yield, as contrasted with **redeemable** and short term debentures and notes. The current profits are estimated at £65,801, covering the Preference Dividend three times. The Company holds an eminent position in the rapidly expanding cinema industry of the United Kingdom, the customers on the books (i.e., Cinema Theatres) numbering 2,590, and is actively engaged in developing export business in British films on a large scale in America, on the Continent of Europe, and in other oversea markets. The Stoll organisation is adaptable to the developments of the Film trade in any part of the world, and will be specially devoted to carrying to every corner of the globe in which business is reasonably remunerative pictures illustrative of British ideals, manners, and customs.

Copies of the Prospectus and Application Forms may be obtained from the London County Westminster & Parr's Bank, 21, Lombard Street, E.C.3, and Branches; the Stoll Offices, St. Martin's Lane, W.C.2, and Branches at Manchester, Liverpool, Birmingham, Cardiff, Leeds, Newcastle, & Glasgow; Maples and McCraith, 22, Low Pavement, Nottingham; and Henry J. Thomas & Co., 130, Bute Street, Cardiff.

THE CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

NOTICE TO HOLDERS OF SHARE WARRANTS TO BEARER.

Notice is hereby given that the Eighth Annual Ordinary General Meeting of the Company will be held at Winchester House (Hall No. 174), Old Broad street, London. E.C., on Thursday, the 16th day of December, 1920, at 2.30 o'clock in the afternoon, to receive the Directors' Report and Accounts, to declare a dividend, to elect Directors and Auditors, and to transact any other business of an Ordinary General Meeting.

And notice is also hereby given that at the said Meeting the following Extraordinary Resolution will be proposed, which, if passed (with or without modification), will be submitted to a subsequent Extraordinary General Meeting for confirmation as a Special Resolution:—

RESOLUTION.

"That the Articles of Association of the Company be altered by inserting the following new Article next after Article 121, namely:—

"121A. A General Meeting may direct the capitalisation of the whole or any of the profits for the time being of the Company, or any accumulations of profits carried to reserve or any sum carried to reserve as the result of a sale or revaluation of the assets or goodwill of the Company, or any part thereof, or any sum received by way of premium on the issue of any Shares, Debentures or Debenture Stock of the Company, by the distribution amongst the holders of the Ordinary Shares of the Company of paid-up Shares, Debentures or Debenture Stock of the Company, and the Board shall give effect to such Resolution and shall apply such portion of the profits or reserve fund as aforesaid as may be required for the purpose of making payment in full at par for the Shares, Debentures or Debenture Stock of the Company so distributed, provided that no such distribution shall be made unless recommended by the Board. Where any difficulty arises with regard to the distribution the Board may settle the same as they think expedient, and may determine that cash payments may be made to any Members in order to adjust the rights of all parties, and generally may make such arrangements for the allotment, acceptance and sale of such Shares, Debentures or Debenture Stock, and otherwise as they may think fit. Where required a proper contract shall be filed in accordance with the provisions of the Companies (Consolidation) Act, 1908, and the Board may appoint any person to sign such contract on behalf of the holders of the Ordinary Shares participating in such distribution, and such appointment shall be effective, and the contract may provide for the acceptance by such holders of the Shares to be allotted to them respectively in satisfaction of their claims in respect of the sum so capitalised."

And notice is hereby also given that an Extraordinary General Meeting of the Company will be held on Tuesday, the 4th day of January, 1921, at 12 o'clock noon, at the same place, for the purpose of receiving a Report of the proceedings at the above-mentioned Meeting, and of confirming, if thought fit, as a Special Resolution such Resolution as may have been passed as an Extraordinary Resolution at such Meeting, and also for the purpose of considering and, if thought fit, passing the following further Resolutions, with or without modification:—

RESOLUTIONS.

(1) "That the Directors be and they are hereby authorised to increase the capital of the Company to £2,000,000 by the creation of 1,000,000 new Shares of £1 each ranking in all respects *pari passu* with the existing Shares of the Company.

(2) "That the sum of £400,000 being part of the undistributed profits of the Company be capitalised by the distribution among the holders (at the closing of the transfer books on such date as may be fixed by the Board of Directors) of the existing Shares of the Company of 400,000 of the new Shares of £1 each of the Company all of which 400,000 new Shares are to be issued as fully paid at the rate of two such fully paid new Shares in respect of every five Shares held and that the said sum of £400,000 be applied in paying up in full at par the 400,000 new Shares of £1 each of the Company to be distributed as aforesaid.

(3) "That such holders shall be entitled if they so desire to have issued to them free of charge duly stamped share warrants to bearer in respect of the Shares to be allotted to them under the last preceding resolution such warrants to be issued in such denominations as the Board may determine provided that no share warrant will be issued in respect of a fraction of a share."

Holders of Share Warrants to Bearer wishing to attend or vote at these Meetings must deposit their Warrants with the Company at the Registered Office in London, No. 22 Austin Friars, E.C.2, two clear days before the dates thereof.

The TRANSFER BOOKS will be CLOSED from the 8th to the 18th December, 1920, inclusive.

Dated this 6th day of December, 1920.—By order of the Board,

ALF. W. BERRY, Secretary.

22 Austin Friars, London, E.C.2.

THE MONEY MARKET.

SHORT loans have been easy enough to get, presumably because dealers in credit have increased its supply by allowing Treasury bills to mature. The seasonal demand for cash on the part of the spending public shows a slight abatement on the corresponding figures of a year ago, when the increase in currency notes was £5,080,000, and in the Bank of England's circulation, expanded by £1,716,000, of which £600,000 was transferred to currency notes reserve; but a year ago the returns appeared

on a date two days nearer to Christmas. The bankers' clearing figures show a substantial reduction. Discount rates were steady, hopes of relaxation in the monetary position after the turn of the year being balanced by the embarrassments of industry and trade, due to the heavy fall in prices, and the consequently weak position of produce merchants, and of all who hold stocks of goods or of securities which are indirectly affected by the prevalent liquidation. This state of affairs can only be ended when retail prices fully reflect the wholesale decline, when the cost of production is brought down to meet the effective demand of consumers, and when by the provision of credit facilities the productive power, and so the buying power, of the impoverished countries can be restored. Some timely observations on this subject were made by the Chairman of the British Overseas Bank at its first meeting yesterday, reported on a later page. Schemes for this purpose are being considered in many directions, and the present deadlock in trade will stimulate their realisation. It was lately reported, for example, in Berlin, that a project was on the anvil for an Anglo-French-American bank to be set up in Germany, and apparently to take over the Reichsbank's note-issuing privilege. We understand that no such plan is, or likely to be, under official consideration in Germany, but the story may be taken as an indication of attempts by financial ingenuity to meet the problem of trade deadlock. Probably the rumour rose out of the scheme for Austria put forward by Sir Ernest Harvey, and described in the *Economist* of September 25th; but the needs of Austria, as need hardly be said, are much more urgent and serious than those of Germany. Last night's *Gazette* announces the arrival of £728,000 more Russian gold. The banks will be closed on January 1.

* * * *

The Bank return showed increases of £934,000 in the stock of gold, which is believed to be due to receipts from Paris, £825,000 in the note circulation, and £109,000 in the reserve. There was a decrease of 3½ millions in the securities, presumably due, in the main, to the repayment of Ways and Means advances; and the deposits show a similar decline, Public falling by three millions, and Other by a half-million. The circulation of currency notes rose by £4,878,000 to £359,175,500, which includes £2,799,600 for notes called in but not yet cancelled. The fiduciary issue accordingly rises to £309,126,000, or £11,474,000 below the maximum. In the period still to be passed through there was a further expansion a year ago of £10 millions. A substantially lower official maximum for the fiduciary issue in 1920, therefore, seems unlikely.

* * * *

The most marked movement of the week in the exchange market has been the sudden rise in the dollar from 3.45½ on the 10th to 3.52-3 yesterday morning. This recovery in the pound sterling has come earlier than was generally expected, and it is too soon to say whether the reaction from autumn pressure has really set in. A generally favourable influence for European rates is the evidently growing realisation in the U.S.A. that if the export trade of the country is not to suffer even more severely, further credits will have to be extended to Europe on a very substantial scale. At the same time, the immediate upward movement may be traced more probably to the large cancellations of orders which have been going on, and the consequent realisation of dollars held as cover, a movement which would be exaggerated by short selling when once the tendency had been appreciated. As was to be expected, quotations for futures have further widened, being for one month 1¾ to 2½ over spot, as compared with 1¼ to 1¾ cents a week ago, for two months 3 to 3½ cents (2½ to 3½ cents), three months 5 to 6 cents (4½ to 5½ cents). Paris, after going up, in spite of heavy realisation of securities on this side, to not far short of 60f to the pound, relapsed again during the last few days, and at 58.30f was on Friday 45 centimes lower than a week before. Funds from the new loan have helped to reduce note circulation to some extent, but the Paris market is by no means optimistic as to the immediate future. Brussels, as usual, has moved roughly in the same way, being on Friday 55.20f, an improvement of 50 centimes on the week, with a small widening in the spread between the French and Belgian rates. The quotation for futures in both centres show wider margins than a week ago, being in Paris 30 to 45 centimes per month under spot and in Brussels 35 to 45 centimes, compared with 27 to 32 centimes and 32 to 38 centimes per month respectively. Italy also, after having been up to 100.50, ended the week only very slightly higher at 99. The adverse movement of the Amsterdam rate has continued, being at 11.19 fl, some 10 cents. lower than the week before, the cause both here and in the Scandinavian centres, which, with the exception of Christiania, have moved against us, being the progressive effect of a growing restriction in imports. The Madrid rate, after going a little lower, is again moving up, and in Lisbon, where financial conditions are going from bad to worse, the rate has moved again during the week from 7½d to 6½d. After some recovery the mark has ended practically unchanged, and the difficulties of Government finance make improvement unlikely, unless, which is extremely improbable, the Conference of Reparation experts, now sitting at Brussels, should come to a settlement of outstanding questions. Among the exchanges of Eastern Europe, the Finnish mark at 142½ shows some recovery on the week, and a considerable one from the figure of 180 at the beginning of the month. It is to be hoped that the excellent step of abolishing exchange regulations in Finland is now bearing the fruits it deserves. The rate for Austrian kronen continues its catastrophic rise, and now stands at about 1,350, while the Polish mark is still higher at 2,200. The rate for Czecho-Slovak kronen remains pretty steady at a little over 300, while Bucharest is quoted at about 275. Athens, after some recovery, is back at 48. All the leading South American rates have moved slightly in our favour. The rupee, after being 1s 5½d, has ended the week slightly higher at about 1s 5d to 1s 5¼d. The yen, on the other hand, has actually weakened slightly to 2s 9½d-10d. Hong Kong and Shanghai rates have risen in sympathy with the slight upward movement in silver.

* * * *

The following table shows public income and expenditure for the week ended December 11, 1920:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	14·791	Supply Services	7·349
From Borrowing	·705	Interest, &c., on War Debt	7·335
		Increase in Exchequer Balances	·190
		Sundries	·622
	15·496		15·496

These operations increased the National Debt by the sum of £705,463, and caused the following changes, which are reflected in our table of National Debt given in another column:—

	Mln. £		Mln. £
Advances from Public Deprts.	+ 6·600	Surrenders of Bonds, &c.	— 1·011
Treasury Bills	+ 11·112	Depreciation Fund	— 1·000
Treasury Bonds	+ ·815	Exchequer Bonds	— 1·331
National Savings Certificates	+ ·300	Bank of England Advances	— 14·750
		Sundries	— 30
	+ 18·827		— 18·122

The floating debt was increased by £2,725,000. Customs and Excise contributed £5,239,000, and Excess Profits Duties £4,197,000 to Revenue.

EVENTS OF THE WEEK.

DECEMBER 11TH.—Twelve police cadets ambushed near Cork. Public buildings in Cork destroyed by fire.

DECEMBER 13TH.—New silver coins put into circulation. Time limit of five years put to Gold and Silver (Exports Control) Bill.

DECEMBER 14TH.—House of Lords reject Ministry of Health Bill. Supplementary Estimates for Navy and Air Service debated in Commons. League of Nations discusses reduction of armaments.

DECEMBER 15TH.—Mr Churchill introduces Army Supplementary Estimates. Mr Asquith moves reduction. Austria admitted to League of Nations.

DECEMBER 16TH.—Bulgaria, Costa Rica, Finland, and Luxembourg elected members of League of Nations. Allied and German finance experts meet at Brussels. Threatened tramway and shipbuilding strikes averted.

DECEMBER 17TH.—Official documents relating to Battle of Jutland issued.

FINANCIAL PROBLEMS.

To meet maturing debt, and debt presented to it in payment of taxes, should the Government tax or should it borrow? This was the chief question raised in a very interesting paper read last Tuesday before the Statistical Society by Sir Drummond Fraser, and he answered it by plumping for a bond, or several kinds of bonds, "on tap," as a solution of the problem. In ordinary times we would venture to remind Sir Drummond that to meet debt by debt is not to meet it at all, and that to pay it off as fast as possible out of taxation is the only sound and businesslike course. He did yeoman's service in war time for the country's finance by pressing the merits of day-to-day borrowing, as opposed to huge loans raised by spectacular methods, which placed them, to a great extent, in the hands of bad holders, and caused much inflation and disturbance. But the best kind of borrowing is not, in normal times, as good as paying one's way, except, of course, when borrowing is done in order to secure by enterprise a real profit greater than the interest and redemption charge. Nevertheless, the times are not normal, and Sir Drummond will carry a large part of the business community with him in his contention that the present scale of taxation is bad for industry, and that, for the time being, at least, it would be better finance, if it could be done, to meet maturing debt by the issue of fresh promises to pay. By this means industry would be taxed more lightly, and the burden of finding the money would be left to people who have a margin available, and would be paid interest for placing it at the disposal of the State. Since industry is the ultimate source of all our wealth, and industry is now in an extremely uncomfortable condition, there is much to be said for treating it as gently as possible at the expense of the interest charge involved, if this borrowing programme could really be relied on to meet the needs of the case. Sir Drummond is convinced that it could, and his authority is high; but the fact cannot be overlooked that there are at present both Treasury bonds and Savings Certificates "on tap," and that in each case the tap is more or less frostbound, and produces only an attenuated trickle, and for very obvious reasons. The stimulus of war patriotism is no more with us, the Government is no longer pouring out newly manufactured money, there is much unemployment and distress, and, above all, the great majority of the investing classes have decided that any money that they lend to the Government is likely to encourage it in wasteful extravagance. If the public could feel sure that any money subscribed would relieve it from taxation, it might subscribe readily; but after its experience in the matter of last year's Funding loan, scepticism on the point would be more than justified. As Sir Drummond pointed out in his paper, "As a matter of fact, it only raised sufficient cash (exclusive of the bank subscriptions) to balance the excess expenditure over revenue." The public's instinct has persuaded it that the only way to make the Government economise is not to let it have a shilling that can be kept out of its claws. Moreover, even if the public were inclined to subscribe to a Government bond, it is clear that terms very onerous to the taxpayer would have to be offered to the subscriber in order to secure his patronage, now competed for by many borrowers, who offer highly attractive rates, and can at least be relied on not to waste money put into their hands on the development of the bureaucratic nuisance. The general approval of the action of the House of Lords in throwing out the Ministry of Health Bill shows what the country thinks of the Government as a body fit to be trusted with money. At present the Treasury is offering 7 per cent. on Treasury bonds, and selling a quite pitiful amount of them week by week. What rate would it have to offer to secure the sum that would be needed if Sir Drummond's plan were adopted?

For reducing the floating debt he put forward the following suggestions:—

(1) The removal of the restriction of the twopenny stamp duty on cheques, which would automatically reduce the use of currency notes.

(2) The removal of the restriction which deters traders and others from investing bank deposits in Treasury bonds, such investment not being considered at present, for E.P.D. purposes, as capital employed in business.

(3) The offer of a bond of the Victory bond type.

(4) The acceptance of Treasury bonds for payment of

LONDON JOINT CITY & MIDLAND BANK LIMITED

THE CLYDESDALE BANK LTD. (OVER 160 OFFICES IN SCOTLAND)

taxes, so avoiding unnecessary accumulation of bank balances.

(5) The establishment of a *statutory* sinking fund of ½ per cent. in addition to the interest on the bond and bill debt.

In the subsequent discussion Sir Felix Schuster strongly endorsed the removal of the twopenny duty on cheques, but pointed out that if Treasury bonds are to be taken in payment for taxes the Government will be so far deprived of cash to pay its way with. The second suggestion was very severely handled by Sir Josiah Stamp, speaking with the unique experience of a former official of the Inland Revenue office and a present worker in the cause of industry. A bond of Victory bond type, to stimulate the investor who likes a spice of speculation, seems a bold venture in view of last year's failure and the present price of Victory bonds; but Sir Drummond apparently believes that the offer of such bonds "on tap" would suffice to secure success. On the whole, though his contention in favour of meeting maturing debt by fresh borrowing can only be accepted with many qualifications, he certainly showed good reasons for trying to improve the present methods of placing securities by continuous issue; and he has done good service by calling attention to the difficulties of the country's financial position, which the Prime Minister and the Chancellor of the Exchequer seek to belittle by the astonishingly airy and irrelevant contention that that of other countries is worse.

Luckily we still have Mentors who take a higher view of our financial prestige, and can look more squarely and straight at our problems. The Fourth Report of the Committee on Public Accounts [231, 3d net] calls attention to a bad blunder made, under circumstances which can only be described as highly discreditable, by the Air Ministry in 1918 with regard to a printing contract, and then proceeds to discuss recommendations made for the improvement of financial control in the Departments. To the details of this highly technical subject we hope to return later. For the present we must confine ourselves to quoting the very serious terms in which the Committee sums up the present need for public economy:—

"The imperative necessity for securing economy in every department of public (as, indeed, of private) life, if national bankruptcy is to be avoided, is not yet sufficiently recognised. Nothing will accomplish it but a return to the almost forgotten tradition established by Mr Gladstone, and carried on by Sir Michael Hicks-Beach, under whom the financial policy of the State was 'by saving numerous pence to spend effective pounds.' Since their day there has increasingly grown up a feeling that small expenses do not matter, and that it is an almost necessary sign of vitality in a public department, and particularly in a new department, that it shall constantly throw off buds of fresh expenditure which rapidly grow into shoots and branches. This tendency was caused first by the growing consciousness by the nation of its wealth in the years before the war, which made it possible to adopt a forward policy of social reform with no undue strain upon the taxpayer. Then followed the war, during which financial considerations took a very secondary place in the minds of public servants. If any proposal had a reasonable chance of helping to win the war it was, as has been repeatedly shown in evidence before us, held to be justified, almost regardless of its cost. If we are to survive as a solvent nation the habit of mind produced by a consciousness of wealth and confirmed by war methods must be entirely discarded. As prices fall, the burden upon the community of services which have to be discharged in fixed amounts of money, such as the national debt and pensions (amounting together in the present financial year to £494,000,000), will become proportionally heavier. We are no longer a nation with a wide margin of taxable capacity: this margin, indeed, no longer exists. We shall, therefore, as a nation (as will each member of it), very frequently have to say that, however justifiable, and indeed desirable, any proposed expenditure may be, we simply cannot afford it. It is only by such methods, steadily enforced over a considerable period, and by meticulous and constant reviewing even of the details of expenditure, that we can hope to win through to a position of equilibrium between expenditure and taxation."

RAILWAY GROUPING AND EFFICIENCY.

At the end of last week the Railway Companies' Association issued a statement, signed by Viscount Churchill, criticising the Government proposals embodied in a White Paper (Cmd. 787) published last June, and making a number of alternative suggestions. This week a memorandum on the same subject has been sent to the Government by the Federation of British Industries. The proposals set forth in the White Paper are dealt with by the Railway Companies' Association *seriatim*. Some are accepted with modifications, while to others strong objection is taken. As far as grouping is concerned, the Association agrees to it in principle, but an alternative system is proposed. Amalgamation of capital, it is maintained, should be optional, and not compulsory, and while the White Paper contemplates the elimination as far as possible of all direct competition between the groups, the Association point out that "it is certain that competition must take place in respect of all traffics for which alternative routes exist, either wholly or partially, by the lines of two or more groups."

The Association strongly objects to the proposal to give the workers a share in the management. In its opinion, "no servant in a subordinate position should in any circumstances be placed at any time in authority over his official chief in the conduct of the business of the undertaking," but it suggests the appointment of committees on which workers would be represented, to make recommendations to the board.

On the financial side, and the question of rate fixing, the statement shows little agreement with the Government proposals. "There is no justification whatever for the proposal that the State should share in surplus profits whilst accepting no responsibility in respect of loss of revenue due to circumstances over which the railways have no control." No objection is raised to the general principles underlying the rate-fixing machinery proposed, but it is in connection with this that one of the most important and concrete suggestions is made. On the ground that the necessary bill could not become law before June or July of next year, and that "the time required for satisfactorily adjusting the many serious problems which will arise will be from two to three years," it is suggested that January 1, 1924, be fixed as the date for bringing a grouping system into operation. But it is also proposed that the Government shall extend the present agreements and guarantee to the railways the 1913 net receipts until January 1, 1924.

As regards wages and working conditions, the Association suggest the re-establishment of the system of Conciliation Scheme Boards first introduced in 1907, instead of the permanent machinery on the lines of the two existing Wages Boards provided for in the White Paper. Strong objection is taken by the Association to the powers suggested by the Government under the heading of "Future Powers of the State in Relation to Railways." It is maintained that these proposals are "wholly incompatible with the decision of the Government that the railways shall be returned to and managed by the companies; and, in fact, place in the hands of the Minister for the time being the effective management of the whole of the railways in Great Britain."

On the whole, the arguments put forward by the Railway Companies' Association seem well founded, but the early-Victorian attitude as to the representation of the workers on the boards of management is likely to meet with bitter opposition. The arguments put forward against this overdue reform are very much out of date. Whether the railway shareholder will be able to glean any crumbs of comfort from the Association's statement seems rather doubtful. In so far as the railways ask for a continuance of guaranteed net receipts until the beginning of 1924, dividends at present rates are likely to be maintained. But it is not certain that the Government will be willing to carry on on the present basis for another three years. The railway companies, for their part, will probably stand by their argument that a new system of grouping cannot be brought into operation before that time. In the meantime, the question of rates remains a serious problem. The raising of fresh capital, which many of the companies require, is a hopeless undertaking

unless they can show a sound financial position. How much further rates can be increased without loss of traffic it is hard to say. So far, owing to the incidence of the coal strike, it has not been possible to ascertain the effects of the recent increases in rates upon the volume of traffic. But whether rates can be increased or not, there is no doubt that there is plenty of room for an increase in efficiency, and consequently in revenue-earning capacity.

America has already tackled the problem, and the New Transportation Act is similar in many ways to the proposals now under discussion here. In an article entitled "To Increase Railroad Efficiency," reprinted from the *Unpartizan Review*, Mr Frank H. Fayant, a well-known American authority on railways, shows how the war affected railway transportation in America. Before the war more than 20 per cent. of the railroad revenues was taken by capital as its share, but increases in labour and costs of material have reduced this to under 12 per cent. On the other hand, the railwaymen take 57 per cent., as against 45 per cent. before the war. "The immediate problem facing the railroad managers is that of producing more transportation. War slowed up railway growth, and to-day there are not enough tracks and trains to carry the tonnage of the country." To overcome this, a national efficiency campaign has been undertaken, with the following objects:—(1) To increase the car movement to 30 miles a day, (2) to increase the car load to 30 tons, and (3) to reduce the number of "bad order" cars to 4 per cent. Efficiency has for years been the watchword of most of the American railways, and they were able in the 10 years preceding Government control to increase wages by 70 per cent. without increasing rates. But the revenues were becoming inadequate, and the Interstate Commerce Commission was confronted by the dilemma that an advance in rates enough to keep the whole industry solvent would swell the profits of the rich roads that needed no larger revenues. The basic provisions of the Transportation Act, which was framed as a solution of the problem, are: (1) The recapture by the Government for general railroad purposes of half the profits of individual companies in excess of 6 per cent. on their property value, and (2) the forced consolidation of the weak roads with the strong into a limited number of large systems. The purpose of the latter provision is to dilute the earnings of the richer roads for the benefit of the poorer lines, and eventually set up a group of consolidated companies, with approximately equal earning power. There is also an earnings guarantee, which instructs the Commission to establish rates which will produce a "fair return" on the value of the railroads as a whole. This is fixed at $5\frac{1}{2}$ per cent. for the first two years, with an additional $\frac{1}{2}$ per cent. for improvements out of earnings. After that the Commission will determine the percentage. The Act does not guarantee the profits of any individual company, nor does it guarantee interest on any securities. "What it does do is to provide a level of rates that will enable the industry as a whole to live—but not grow fat—and give a modest reward to the most efficient and most fortunate.....Under the new order of things, rising profits will mean rising dividends only to the point the Government consider necessary to establish a firm credit foundation. After that, the bigger the profits, the lower will be the rates charged the public, because the new law restricts profits, and the quickest way to cut profits is to cut rates." This is without doubt the order of things aimed at over here, but there must be considerably more elaboration and discussion of the plans as they now stand before the object can be attained.

THE LAST OF THE OLD COUNTRY BANKS.

(BY A YORKSHIRE CORRESPONDENT.)

With the London County Westminster and Parr's-Beckett amalgamation disappears the last of the old private country banks with a note issue and publishing a balance-sheet. It is something for six generations of a family to have lasted nearly 200 years in business among the hard-headed and tough traders and farmers of Yorkshire. Beginning as a Leeds trading concern early in the eighteenth century, the enterprise of its founders soon extended to overseas ventures, and those of their friends and customers who share in these ventures were soon glad to leave their profits in the business. This constant dealing with foreign bills, money, and advices soon begat a special skill which was quickly recognised in the district, and when the fame of the firm began to be noised abroad in the surrounding countryside the farmers soon came in with money to deposit. So the banking side of the business grew, then overshadowed, and finally drove out the merchanting. It is of interest to note that although most private banks in England began by taking in deposits and then lending them out to industry, Becketts began in the old merchant venturer style, and it was their skill and pluck in business which made the reputation that attracted the depositor. Soon after the middle of the eighteenth century the firm settled down as a bank simply, and placed all the knowledge they had acquired in trade at the disposal of their customers, the friendlier because they no longer felt they had a trading competitor to deal with. From time to time the firm made partners of local men of reputation, but the conduct of the business and the control of its capital were rigidly kept in the hands of the family, whose members stuck to the town of Leeds, and were always foremost in promoting its prosperity. The business grew steadily, and survived without difficulty the many crises which troubled trade in the early part of the last century. Then came the placid days of mid-Victorian prosperity, and with them the chance of extension. The Cooke family business in Doncaster and North Notts was absorbed, and troubles in York and the North Riding offered the opportunity, at once taken, of acquiring the goodwill of Swan, Clough, and Co. and Bower, Hall, and Co., whose branches became known as the York and East Riding side of the partnership. The country area there covered quickly proved a good gathering ground, meeting well the complementary borrowing demands of industry in the West Riding. Later, branches were opened in Bradford and other West Riding towns, and soon made rapid headway. The then limits of capital probably prevented still further extension. Before long, the bigger joint-stock banks turned their attention to the district, and, either by purchase or direct opening of new branches, made a strong bid for business of which the banking world well knew the value. Becketts held on serenely, met the new conditions with new methods, and steadily improved their position wherever they had planted themselves. The war came and went, leaving them the last private banking partnership of any size in England. In Yorkshire they had come to be regarded as a fixed public institution which neither time nor tide could affect; the news of their disappearance as a separate unit is therefore received with the greater regret. It is worth inquiring—what were the qualities which, throughout all vicissitudes, have kept this bank in the prominent position it has held in Yorkshire, always with the cream of the banking business of the county? The explanation is simple. The business from the start remained in the hands of a family whose members from generation to generation devoted themselves to work and to the well-being of the district, lived in it, and understood it and its dwellers to the core. In no other fashion could six generations of a family have held together their business for close on 200 years. The partners in Becketts have always believed that strong though the tendency may be in some quarters to dehumanise business, the power of sentiment and personal treatment is as subtle a factor as ever in the smooth running of a big public institution. Their successors themselves spring from a grouping in which personal treatment has been strongly developed, and no doubt the old policy will continue. In any event, many Yorkshiremen to-day are hoping so. Perhaps the position held by Becketts in Yorkshire may best be illustrated by the story told of a little business man who inquired of a friend who banked there, "What will Becketts do for me if I go there?" and got the answer in the dialect, "Owt but wesh tha'," which, being interpreted, means "Everything but wash you." For Doncaster another story is told. An old farmer was offered a cheque drawn on white paper for stock sold, and promptly refused it. "What's wrong?" was the surprised inquiry. "What's wrong, lad; why, look at colour; all reight cheques is blue" (the Beckett colour). Generation by generation the bank has given of its partners to the House of Commons, and more recently the

names of Grimthorpe, Faber, and Wittenham to the House of Lords. It is practically the last of its kind, and with it the old order goes.

It would appear in some sense that the qualities which served the old order find small place in the new world of commerce. Perhaps the fashion will change, and mass again be treated in proper relation to quality.

The system of a few great banks in close competition is to-day accepted generally by trade and industry as convenient as well as inevitable, as being better able to deal with the huge combinations into which industry has marshalled itself, and as being well equipped to meet every kind of demand that a customer may make both for home and foreign trade. It is the latter, moreover, with all its intricate ramifications, that we have to depend on to put back British trade in its old supremacy. These great banks can build up reserves outside the deadly grip of super-tax, have no corpus for death duties to cut up, find shareholders in their customers, and hear the whisperings of every market in the world.

It is sometimes asked: Are the banking directorates as at present selected capable of running such large and complicated machines? The answer is: To a considerable degree they do not run them; they rely on their executives. The other extreme is reached in the United States and in Germany, where the executives are the directors. That would not altogether answer in this country—at least, not yet; but, without doubt, English boards would be greatly improved by a stronger admixture of men who thoroughly understand the higher technicalities of their business.

THE WORLD'S PETROLEUM.

Petroleum has rapidly become one of the foremost questions of the day. Demand is quickly overtaking supply—if it has not already done so—and this is particularly the case in the U.S.A., the chief producing and consuming country. It is estimated that the total world demand in 1921 will not be far short of 700,000,000 barrels, and of this huge demand the U.S.A. alone will consume 565,000,000 barrels—that is, 120,000,000 barrels in excess of her own production of 445,000,000 barrels. This deficit of 120,000,000 barrels will have to be made good by importation from Mexico. These figures were given by Mr W. C. Teagle, president of the Standard Oil Company of New Jersey, at the recent annual meeting of the American Petroleum Institute, held at Washington on November 17-19.

The meeting was attended by a large number of the leading men in the oil industry, including also the directors of the U.S.A. Geological Survey, the Bureau of Mines, and experts and representatives from other countries, including Mr. Richard Airey, of the Roxane Petroleum Company, representing Great Britain. The speeches reflected the gravity of the petroleum problem, and their tone was, on the whole, admirably fair and impartial, and generally optimistic. If anything, there was just a little too much emphasis on American philanthropy towards the rest of the world, and a somewhat exaggerated view of her generosity in supplying other countries with her oil and products. No one expects America or any other country to play the part of fairy godmother, or be unduly altruistic with the good things Nature has bestowed upon her; and equally, no one blames her for putting her oil industry on a strictly business basis, and making as much as she can out of it, especially in view of the undoubted risk attached to the industry, the vast amount of capital and enterprise needed, and the great losses involved in unsuccessful wild-catting. It was recently stated in an American journal that "the great heart of America cannot escape the obligation to provide Europe with coal—especially while Europe offers four times what it is worth"; and the same may perhaps be said of American petroleum.

Doubtless in the past the United States supplied the world with most of the petroleum it required—at a price; and she is still doing so; but just now she is not only by far the largest consumer of her own supplies, but also imports large quantities from outside. According to Mr Teagle, the *per capita* consumption of petroleum in the United States is no less than 220 gallons per annum, as compared with 14 gallons for the whole world. It is, therefore, rather difficult to follow the same speaker when he says: "According to British views, the U.S.A., contributing 70 per cent. of the world's current production, should be content with things as they are; this is an entirely fallacious view, the real truth being that the United States is now spending its petroleum wealth for the world's benefit in order to meet 70 per cent. of the world's present demand."

Mr Richard Airey presented the real British and European point of view in an admirable speech. While gratefully acknowledging America's help during the war in the matter of petroleum supplies, he pointed out that, with the end of the war, Great Britain could not complacently behold her utter helplessness in regard to supplies of this most valuable product, and she had joined the noble army of wild-catters by spending five million dollars in searching for oil in England and Scotland. With regard to potential oil-lands in European countries and possessions, he thought the citizens of those countries should have prior claim to concessions; but in the framing of a world policy generally very great caution would have to be exercised. The petroleum requirements of Europe, and particularly Britain, are enormous, but Mr Airey very rightly pointed out that the open-door policy, now being so strenuously advocated by American oil interests, was already in operation in the British Empire. For example, America's oil-men were developing the oil resources of Canada, and were also represented in Trinidad. He emphatically declared that Great Britain was not seeking a world monopoly. The great nations at this time cannot possibly afford to engage in commercial rivalries; and it would be in any case absurd for us to try and get such a grip of the world's petroleum, for the United States already enjoys the balance of power within her own territories and those of Mexico. There is, beside, the great difficulty of adverse exchange; it costs 100,000,000 marks to lay down a cargo of gasoline in Germany to-day, 23,000,000 francs in France, 40,000,000 lire in Italy, and £400,000 in Great Britain.

Other notable speeches at the meeting included one by Dr G. Otis Smith, Director of the U.S. Geological Survey, who said that the petroleum question is an international question of the first order, and he strongly recommended a much stricter economy in use, especially in the U.S.A., and also economy in transport. He earnestly advocated the open door policy and the pooling of petroleum resources as most beneficial to all the nations. He referred to the enormous deposits of oil shales in North America as a promising source of fuel oil, but in the opinion of other speakers the distillation of shale oil is a too costly process to compete with petroleum for some considerable time to come; this, of course, remains to be seen, and will depend on petroleum prices and the efficiency of the processes of winning and distilling shale oil. In regard to petroleum prices, Mr R. D. Benson, of the Tidewater Oil Company, was very strongly of opinion that the output of oil in the United States will depend on the price paid, and that, if a price is paid sufficient to justify the risk, then supplies of crude will be ample and sufficient. He backed up this statement with numerous figures.

The president of the Petroleum Institute, Mr Thos. O'Donnell, was inclined to be optimistic. His chief fear was not an actual shortage of petroleum, but too much Government interference, and "the foolishness and selfishness of men."

The same views were expressed by Mr A. C. Bedford, chairman of the Standard Oil Company of New Jersey. "What international trade needs is the removal of every vestige of artificial regulation and restriction, and this applies particularly to the petroleum industry."

There is no doubt that the leaders of the American oil industry are suspicious of the British Government's policy, and urge the removal of all restrictions and a perfectly open door to all, including Americans, to the oil fields, present and future, of the world. In his reply, dated November 20th, to Lord Curzon on the subject of the San Remo agreement between Britain and France *re* oil concessions in the Near East, the American Secretary of State criticises this agreement, says that the principle of the open door should be applied to mandatory territories, and argues the right of the United States to have a voice

in mandatory matters even though she has not yet joined the League of Nations. In the course of a long note the secretary observes :—" Such information as this (U.S.A.) Government has received indicates that, prior to the war, the Turkish Petroleum Company possessed in Mesopotamia no rights to petroleum concessions or to the exploitation of oil; and in view of your assurance that it is not the intention of the mandatory Power to establish on its own behalf any kind of monopoly, I am at some loss how to construe the provision of the San Remo agreement, that any private petroleum company which may develop the Mesopotamian oilfields 'shall be under permanent British control.' "

It is clear that the petroleum question, both commercially and politically, is a very difficult one, and will have to be handled with the utmost discretion and goodwill.

THE WOOL TANGLE.

A STATEMENT has been issued by the Ministry of Munitions to the effect that it is considering certain proposals unanimously adopted by a very large and representative Conference of Wool Growers held in Melbourne on December 7th. The Prime Minister of Australia has intimated that the immediate acceptance of these proposals is a matter of urgent and vital moment to the sheep industry of Australia, and to the prosperity of the Dominion as a whole. According to the official statement :—

The operations under the Imperial Wool Purchase Account up to March 31, 1919, were fully set forth in Command Paper 788, together with the main figures relating to the financial year ending March last. The profit of about £13,000,000 realised to March 31, 1919, was recently distributed, one half being paid to the Australian wool growers through the Central Wool Committee, and the other half being surrendered to the Treasury. The profits on Australian wool sold after March 31, 1919, have been very large, and the present position is that all Treasury advances for the purchase of about 7,000,000 bales of Australian wool in all have been repaid with full interest, and substantial surplus assets now stand in the books free of cost, consisting of about 1,800,000 bales of wool and a large sum in cash over and above all liabilities. The accounts up to March 31, 1920, are subject to audit, but for the purposes of the present statement the result is known with sufficient accuracy. Taking the wool at the purchase price, plus transport charges when incurred, the surplus assets of the Australian section of the Wool Purchase Account are estimated to amount to about £56,000,000 sterling.

There being no probability in the present state of the wool market of an early disposal of the large carry-over of wool, the request is now made on behalf of the wool growers that their half share of the assets shall be handed over to them on December 31st. It is proposed that these assets, whose book value, as above stated, is about £28,000,000, shall be capitalised at £25,000,000 sterling, and that a company shall be formed to be registered in Melbourne under the style of the British-Australian Wool Realisation Association. It is proposed that the said capital of £25,000,000 shall be divided into ordinary transferable shares and debentures, and that scrip for the same shall be distributed amongst the wool growers as their final dividend under the Imperial wool contracts. It is suggested that the board of directors shall consist of nine directors, of whom some will reside in Australia and some in London, their names to be submitted to the British Government for approval. The main object of the Association is to be the realisation of the carry-over wool to the best advantage, but general trading powers will be taken in the articles of association.

It is requested as a vital part of the scheme that the British Government shall hand over to the association for sale on agency terms the British half of the carry-over wool—it being understood, of course, that the British half of the surplus cash shall be surrendered to the Treasury. There being very great difficulty in making a physical division of the wool, it is intended that from December 31st onwards the property of one half of every bale of wool shall be vested in the association and the property of the other half shall remain vested in the British Government, so that all sales of old clip wool shall be on joint account, the association accounting to the Treasury for half of the proceeds of every sale.

As above stated, these important proposals are being very carefully studied by the Minister of Munitions. It is not the intention of the Minister of Munitions to recommend H.M. Government to adopt any course likely to lead to the formation of a trust or combine which would adversely affect the interests of the consumer or those of British trade.

If this last sentence is to be taken literally it would mean that the scheme will be rejected, because it certainly implies the formation of an association to hold up wool, in the endeavour to secure a huge profit for the Treasury and the wool growers, to the detriment of the consumer and of the prompt recovery of trade. But it is probably an example of official "eyewash," since it is generally assumed that the scheme will go through in deference to the wishes of Australia and the wool growers, whose views have to be treated with high consideration in view of the facts of the case. The problem has arisen because the Government bought (quite rightly in view of the possible continuance of the war) supplies of wool far in excess of what was actually needed, and now finds itself holding a vast supply, which, if too rapidly sold, would demoralise the market and seriously embarrass growers whose fresh supplies are coming forward. There is thus much to be said for a cautious handling of the position by special measures. On the other hand, we have to remember that the Treasury and the growers have made huge profits out of the past operations, and that whatever is realised by the present holding will be further profit to be divided between them. What is wanted is to get this block out of the way and into the hands of manufacturers without wrecking the market for the current produce. There would here seem to be a good opportunity for relieving a difficult position and assisting the recovery of Europe by setting up a committee of wool merchants to sell the wool on long credit to customers in the impoverished countries, whom it would select as most trustworthy, a lien on the wool being retained as in the Austrian scheme to which we referred in last week's *Economist*. By this means the gap in the world's trade left by inability of our late Allies and enemies to pay for raw materials would be *pro tanto* filled.

AUSTRALASIAN LAND COMPANIES.

LAND, mortgage, and pastoral companies operating in Australia and New Zealand have had an unfavourable year's trading. Drought, heavy taxation, and scarcity of freights each in turn contributed to the reduction in profits. The season during the 12 months under review in Australia began with a severe drought, resulting in losses of stock. Light rains eventully brought some relief. Later heavier rains fell, and better conditions prevailed. In New Zealand, however, conditions were more favourable, and better results were obtained. The Australian Agricultural Company reports that the demand for land on the Newcastle and Platts Estate continued active during the year. Building sites were in request, owing to the starting of new industries, and building operations are proceeding fast. The threatened legislation in Queensland on pastoral leases has materialised, and the Bill has now become law. The result has been that the credit of Queensland has been seriously affected.

The scheme under which the British Government purchased the Australian and New Zealand wool clip came to an end on June 30th last. But the Imperial Government undertook to pay 50 per cent. of any profits made by it on resale of the wool. This source of revenue proved of considerable assistance to many companies. For instance, the New Zealand and Australian Land Company obtained £94,600 from this quarter, to which further reference is made below. The Australian Pastoral Company anticipates a substantial income from this source, which the company states will be placed to reserve.

In the tables which we give below we have analysed the balance-sheets and profit and loss accounts of 10 representative companies, and compared them with the figures for a pre-war year. In our first table we have extracted the most important liabilities, and present them as follows :—

LIABILITIES.

	1912-13. Debent're and Loan Capital.	1919-20. Debent're and Loan Capital.	1912-13. Pref. and Ordinary Capital.	1919-20. Pref. and Ordinary Capital.	1912-13. Reserves.	1919-20. Reserves.
	£	£	£	£	£	£
Australian Agricultural	8,092	..	800,000	800,000	158,500	171,600
Australian Estates and Mortgage	2,271,626	2,072,050	465,049	942,629	160,000	152,400
Aust. Merc., Land, and Finance	1,913,340	1,898,640	520,000	520,000	400,000	611,200
Australian Pastoral	93,000	..	932,500	932,500	340,000	613,600
Dalgety and Co.	2,639,613	2,337,702	1,500,000	1,500,000	551,000	1,309,500
N.S.W. Land & Agency	160, 00	150,000	261,450	261,450	32,200	67,100
N.Z. & Australian Land	685,900	678,100	2,500,000	3,000,000	656,710	621,800
N.Z. Loan and Mercantile Agency	1,700,000	1,700,000	1,823,514	2,000,000	276,870	788,500
Scottish-Aust. Invest. ..	354,900	324,200	1,100,000	1,100,000	100,000	460,600
South Aust. Land Mort.	117,100	32,350	139,102	139,102	46,480	70,400

It will be noticed that two companies have extinguished their debenture debts. Another point worthy of notice is that there is little change in the ordinary capital when compared with figures for 1913. Only three companies have increased their ordinary capital in this period.

In the next table assets are shown :—

ASSETS.

	1912-13. Land, &c.	1919-20. Land, &c.	1912-13. Cash and Invest-ments.	1919-20. Cash and Invest-ments.	1912-13. Total Assets.	1919-20. Total Assets.
	£	£	£	£	£	£
Australian Agricultural	710,000	254,697	152,024	464,869	1,182,776	1,349,513

N.Z. & Australian Land	2,532,310	2,504,452	772,003	1,254,664	4,944,574	4,237,382
N.Z. Loan and Mercantile Agency	1,614,736	2,375,029	884,030	957,646	4,508,365	5,641,092
Scottish-Aust. Invest.	1,405,927	1,237,103	122,842	606,161	1,792,345	2,074,102
South Aust. Land Mort.	205,001	167,962	53,975	74,129	319,817	277,698

The Australian Mercantile Land and Finance Company shows "loans on land" and "property owned" as one item. Dalgety and Co.'s business consists mainly, of granting financial assistance to farmers and others; advances on land, wool, and other produce have, therefore, been shown in the above table under "Land." We have followed the same practice in the case of the New Zealand Loan and Mercantile Agency. The Scottish Australian Investment Company has investments also in Canada and the Argentine.

In the following table profits for the past year are compared with those for 1912-13. Amounts paid in ordinary dividends are also given, together with rates per cent. of distribution on ordinary capital :—

Company.	Year Ending.	Profit.		Ordinary Dividend.			
		1912-13.	1919-20.	1912-13. Am'nt.	Rate.	1919-20. Am'nt.	Rate.

* Free of income-tax.

With the exception of the Scottish Australian Investment Company, all the undertakings in our list show considerably reduced profits when compared with last year's figures. The New Zealand and Australian Land Company, Limited, had an unfortunate year's trading. The report states that "The drought of the previous year continued in Australia during the year under review with increasing severity, with the result that very heavy losses of stock occurred. Upwards of £150,000 was spent on artificial food and rental of relief country, in order to save as many as possible of the more valuable sheep and cattle, especially the breeding stock." As will be noticed above, the loss on the year's working of this company was £176,080. But £94,600 was received for "profits on the resale of wools by Government," and £320,000 was transferred from the contingency fund. This provided the company with a surplus of £241,676, and dividends were reduced only from 11 to 10 per cent. The Australian Agricultural Company was compelled to take £43,000 from various reserve accounts to assist revenue for the year. The abnormal expenditure of this company to meet conditions brought about by the drought amounted to £45,000, and the directors decided to spread this outlay over a period of three years. The Australian Estates and Mortgage Company announce that the capitalisation of a portion of its reserve has now been effected, and the capital of the company has accordingly been increased by £313,933 to £942,629. In welcome contrast to this, however, the South Australian Land, Mortgage, and Agency cancelled £12,100 of debenture stock by purchase, thus reducing its total outstanding debenture debt to £32,350.

Our final table is a table of prices and yields, showing the change since the period before the outbreak of war :—

Name of Company.	No. of Shares or Amount of Stock.	Amount.	Paid Up.	Price July 30, 1914.	Price End of Nov., 1920.	Yield.

† Free of income-tax.

There has been a considerable fall in value of these securities since our last article on the subject appeared. This downward movement is a natural result of the bad year which companies have experienced. The fall in preference shares and debentures is due more to the general fall in fixed interest stocks than to any other cause.

Business Notes.

More Supplementary Estimates.—Last week the chief feature of the House of Commons was the economy debate; this week a shower of supplementary estimates. The Air Service demands an additional £1,935,300, the Navy £6,500,000, and the Army £39,750,000, amounting in aggregate to £48,185,300. In a memorandum on the Army estimate Mr Churchill explains that £16,000,000 is due to disappointed hopes of reducing forces in the Middle East, £10,500,000 to an excess over estimate in the numerical strength of British forces, while £18,000,000 are required for adjustment of war accounts. In aggregate the supplementary Army estimate would have been £48,000,000, but a windfall in respect of wool and certain economies reduce it to £39,750,000. Mr. Churchill concludes his memorandum with the following sentences :—"In presenting a total net supplementary estimate of £39,750,000 I have not taken any margin for unforeseen contingencies. I have already warned the House, however, that it is very difficult to estimate with certainty in times like these so long before the end of the financial year, and this is particularly true of that large portion of Army expenditure which is at present incurred on behalf of the War Office by the Government of India. Several important items enumerated above are, however, still in dispute and in suspense, and after careful consideration of the whole position I feel justified in balancing the prospects of reduction against the apprehension of future increase." This reads ominously like a preparation for the introduction of a further supplementary estimate before the end of the financial year. It will be remembered that in the economy debate last week the Chancellor of the Exchequer stated that the supplementary estimates so far produced would be covered by economies elsewhere. Even so, it does not follow that these supplementary estimates are incapable of reduction. The House of Commons, as usual, has, in spite of some spirited speeches of criticism, failed to reduce any item by a single penny.

Stock Exchange Dual Control.—For the last twenty months an independent committee of Stock Exchange members have been exploring the avenues which could lead to unification of interests in the House, and they have had the advantage of assistance from Sir William Plender and Mr Payne, a director of Lloyds Bank, in arriving at a scheme, of which details were published here last May. This particular scheme meets with little support in the Stock Exchange, and, quite manifestly, Tuesday's meeting was not in favour of it. The principle underlying it, however, that the time is ripe for bring-

ing together and fusing into a single whole the conflicting interests of proprietors and members, is more likely to commend itself to members, and, although the resolution recommending it was lost, a poll is being taken which may show a different result. In 1904 the Stock Exchange made it obligatory for all new members to acquire a share or shares in the House. It is calculated that within 25 years under this plan everybody will be a shareholder, and unification of interests thus carried out mechanically. At present, there are 2,500 shareholders, and some 4,000 members, but of those who hold the 20,000 shares, there are non-members and outsiders who possess 3,255 shares, leaving 16,745 for members of the Stock Exchange. The managers, as trustees, take their stand of opposition to the scheme on the ground that they can only sell the Stock Exchange to the proposed new company on condition that a fair price is paid, and a large amount of this in cash at once. They claim that present proprietors should have the firmest possible guarantee that any new company should be able to carry out its obligation to purchase. Against this, one of the members of the committee pointed out that the position is unique, in that the Stock Exchange member would be both a seller and a buyer in the same transaction. Shares in the new company could only be held by members, who would have to buy themselves out of the present company on terms which they will have to fix for themselves. The foresight and skill of the managers is admitted by all those who have followed the fortunes of the Stock Exchange for the past half-century. This appreciation is turned to account by those in favour of dual control abolition. They maintain that, had the advantages which good management has assured to proprietors been turned to the benefit of members as the whole, the Stock Exchange of to-day would be in such a position as would give membership a far more solid worth than is represented by the fact that nominations stand about £70 each. Had the money paid in dividends been employed in building up a guarantee fund, and in other directions which would benefit the whole House, the credit of the Stock Exchange member would stand in a position almost unassailable. The power of the committee is supreme in its own particular sphere, as legal actions, especially those brought during the war, served to emphasise, and, looking to the future, the principle governing the Stock Exchange should be to put the credit of the House into a position equally sound. The chairman of the Stock Exchange Committee declared that it was to the future that present-day members should look, half-apologising for this as being altruistic, although he might have said that such altruism would, even from the commercial point of view, pay the House far better in the long run than big dividends would benefit present proprietors. It is no easy matter to set aside immediate advantages for the sake of a posterity which has done nothing for the present generation, but had the Stock Exchange managers of past days failed to pursue a sacrificing and austere financial policy at the expense of heavy distributions to proprietors in bygone years, it is certain that the House would never have become the prosperous dividend-payer, or established its financial position so securely as is the case to-day.

New Silver Coinage.—Last February, when the price of silver had risen to 88d per ounce, the Chancellor of the Exchequer passed through Parliament a Bill to permit a reduction of the fineness of the silver coins to be minted in future. The objects of the Bill were officially explained as follows:—"It is proposed by the Bill to reduce the fineness of the silver in the coins hereafter minted from .925 fine to .500 fine; with silver at 88d, the intrinsic value of a one-shilling piece .500 fine will still be considerably more than the intrinsic value of a one-shilling piece .925 fine in July, 1914." The first instalment of the new silver coins has been issued this week, and as successive issues pass into circulation the old silver coins will be withdrawn. The carrying out of this policy is not affected by the fall in the price of silver to below 40d, which has since occurred.

The Company acts as Eastern Agents for manufacturers and others, and invite correspondence with the view of developing foreign trade.

The Severn Barrage.—The third interim report of the Water Power Resources Committee issued this week (White Paper Cmd. 1,079, price 2d. net) is almost exclusively devoted to a consideration of what is known as the Severn Barrage scheme—that is, a scheme for utilising the tides of the Severn Estuary for power purposes. The report is essentially preliminary and inconclusive, but the committee were sufficiently impressed with the possibilities to recommend the appointment of a technical and scientific Commission of Inquiry. The committee outline 18 separate physiographical, engineering, commercial, industrial, and economic problems in connection with the scheme which require expert investigation. The committee feel that no estimates of probable cost can usefully be given at this stage. Although the committee strongly emphasise their opinion that the possibility of public advantage is so great as to warrant exhaustive investigation, they obviously regard such exhaustive investigation to be a necessary prelude to the incurring of public expenditure on the scheme.

Coal Output.—The figures of coal production for the week ended December 4th show that the higher level since the end of the strike is being fairly well maintained, the amount being 5,176,200 tons, as against 5,176,500 tons in the previous week, and 4,808,500 tons in the corresponding week of 1919.

Prospective Cotton Supplies.—Our Manchester correspondent writes:—At the beginning of this week the United States Government published an estimate of the cotton crop for this season, the report giving the figure as 12,987,000 bales, exclusive of linters, as compared with 11,030,000 bales last year, and 11,700,000 bales in 1918. It may be said that the acreage planted in the spring of this year was 35,654,000 acres, against 35,233,000 acres in 1919. On the statistics published it is anticipated that the total yield for the twelve months ending July 31st next will be between 13,500,000 bales and 14,000,000 bales, as compared with 12,215,000 bales in 1919-20. In view of the depression in the cotton industry in all countries and the probable reduced consumption, users have reason for believing that supplies will be plentiful for some time to come. The decision of the Egyptian Government to restrict the cotton acreage for next season by one-third has been considered by the Manchester Cotton Association and the Manchester Chamber of Commerce, and on behalf of the interests affected Mr E. F. Stockton, the president of the Chamber of Commerce, has sent a letter of protest to Lord Milner, the Colonial Secretary. The proposal if carried out may be serious for Lancashire, especially should there be a revival of demand in the near future, and it is certainly strange for there to be an agitation backed up by the British Government in favour of extending the growth of cotton, and then to allow one of our Protectorates officially to limit the output.

British Rule in Mesopotamia.—A correspondent writes:—The Prime Minister told the House on Wednesday that we cannot withdraw from Mesopotamia until we have fulfilled all our pledges to the Arabs and the League of Nations and our commitments under the Treaty of Peace. What we have done towards that end, and why the Arabs have opposed us, is set forth in the learned and exhaus-

tive report by Miss Gertrude Bell (whose experience of the country and people is unrivalled), published as a White Paper on Saturday last. Long before the Young Turk revolution, Mesopotamia had been the worst governed and most disorderly part of the Turkish Empire; afterwards its state grew worse. The administration was complicated, incoherent, and corrupt; usually lax, but spasmodically very oppressive. Under British occupation, the administration was simplified, the many superfluous officials eliminated and (as an act of grace) given small pensions, the work was begun of clearing up titles to land (all of which, under Turkish rule, was State property, unless specially assigned, *e.g.*, for pious uses)—a herculean task, complicated through the destruction by the retiring Turks of all office records, and the invariable inaccuracy of the descriptions in the deeds. Education was recast and extended, the people responding eagerly; new law courts and a provisional code were set up and welcomed; the utmost regard was shown for native law, custom, and religion; sanitation was introduced, dispensaries set up, nurses and midwives trained; municipal governments were organised; irrigation was vastly improved, much land reclaimed and cultivated, and the yield greatly increased; railways and roads were made, and eagerly welcomed; and the production was fostered of wheat, cotton, silk, and tobacco. Steps were taken early in the occupation to ascertain the popular view as to a Native State, and efforts made to prepare for it since the award of the mandate; but the delay in the award set up discontent, and the educated Nationalists of Baghdad worked for a completely independent "Islamic State." They found support among the ex-Turkish employees, and certain powerful sheikhs and disorganised tribes who stood to profit by disorder, and they worked up support among the rural masses through the "holy men" of the sacred cities, with some Bolshevik assistance. The "Islamic State," however, meant to the educated Nationalists an Arab Government, to the holy men a theocracy, and to the tribes complete freedom from taxation and control. Echoes from the English Press and Parliament, and withdrawals of troops on the northern frontier, increased the belief in an impending British withdrawal. Then came the rising, now suppressed. In Baghdad it collapsed in August, after the flight of the leaders to avoid arrest, but early in July certain predatory tribes on the Middle and Lower Euphates, and some leading sheihks, partly from self-interest, but mostly under pressure from the holy cities, broke out into revolt. The way is now clear for the erection of the Native State. Many leading sheikhs are wealthy, and, though illiterate, intelligent and eager for roads and railways; but they know only tribal organisation, and stand quite apart from the town dwellers. And until a native army is created, and Arab officials and teachers trained, the Arab State will not be able to stand alone.

Tramway Statistics.—Statistics relating to Tramways Light Railways, and Trackless Trolley Undertakings, formerly issued by the Board of Trade, but suspended owing to the war since the year 1913-14, have now been compiled by the Ministry of Transport, in respect of the year ended December 31, 1918, for companies, and March 31, 1919, for local authorities. The return presents some new features. In addition to the net receipts from the operation of tramways, particulars are now given of the income derived from other sources and the total net income available for distribution. The income and expenditure, on revenue account, of tramways which are not worked by the owning companies or authorities are also included for the first time. The statistical tables have been amplified to include for each undertaking the average number of cars in use, traffic revenue per car mile, car miles run per car per day, working expenses per car mile, fare per passenger, distance passengers conveyed for each fare, fare per mile, and number of units of electrical energy used per car mile, &c. The number of car miles run during 1918-19 was 9.59 per cent. less than in 1913-14, but the number of passengers carried increased by no less than 33 per cent., as shown in the following tables :—

Car Miles Run.

	1913-14.	1918-19.	Decrease.	
	Miles.	Miles.	Miles.	Percentage.
Local authorities ..	262,675,163	244,162,588	18,512,575	7·05
Companies	91,704,509	76,215,788	15,488,721	16·89
Total	354,379,672	320,378,376	34,001,296	9·59

Passengers Carried.

	1913-14.	1918-19.	Increase.	
	Number.	Number.	Number.	Percentage.
Local authorities ..	2,696,759,064	3,632,525,882	935,766,818	34·70
Companies	729,714,128	925,114,196	195,400,068	26·78
Total	3,426,473,192	4,557,640,078	1 131,166,886	33·01

The total capital expenditure on tramways in the United Kingdom to the end of the financial year 1918-19 was £82,842,722, an increase of £1,864,884, or 2.3 per cent., compared with the year 1913-14. The total gross receipts during the year 1918-19 were £24,635,266, and the total working expenditure £17,751,277, leaving net receipts amounting to £6,883,989. Maintenance and renewal work undertaken during the year 1918-19 was necessarily inadequate, but in spite of this the ratio of working expenses to receipts was 72.06 per cent., as compared with 64.35 per cent. in 1913-14.

Finland's Foreign Trade.—The latest figures of Finland's foreign trade give imports in September at 393,784,527 Finnish marks, and exports at 364,609,199 Finnish marks. For the nine months ended September 30th the figures (in Finnish marks) were :—Imports 2,537,976,354, and exports 1,928,441,774. Re-exports in September were 2,337,112, and in the nine months 18,932,753 Finnish marks. There was a marked increase in the import of cereals in September. Over one-half of the value of the nine months' exports is represented by wood and wooden goods, by more than one-third by paper, pulp, cardboard, &c. Cereals, sugar, coffee, leaf tobacco, raw cotton, metals and manufactures thereof, machinery, and oils and fats are the principal imports.

Rights of Preference Shareholders.—A legal correspondent writes :—It frequently happens that the memorandum of association is silent as to the rights of the various classes of shareholders as to participation in surplus assets in a winding-up, *i.e.*, where the assets show a surplus after all proper payments have been made. In recent years this had led to a good deal of litigation. The question arose in the winding up of the National Telephone Company, and was elaborately argued. Mr Justice Sargant decided that, in view of the special wording of the memorandum, the preference shareholders were not entitled to participate at all, their rights being confined to preferential payment of dividend and capital only, but he then went further, and decided in general that the mere provision giving preference shareholders priority for repayment of their capital implicitly negatives their right to participate in surplus assets. This was contrary to a decision previously given by the late Lord Swinfen, and the conflict of view has created much doubt. Two cases, however, have recently raised the same point, and in these cases Mr Justice Astbury and Mr Justice Eve have followed Lord Swinfen's view and rejected that of Mr Justice Sargant. The weight of authority is, therefore, in favour of the preference shareholders. The principle which finds favour with the majority seems to be this—in the absence of provision to the contrary, all shareholders have equal rights proportionate to the nominal value of their shares.

Mexican Railway.—The report of the Mexican Railway Company, Limited, for the half-year ended June 30th last states that as the line was handed back by the Government on June 19th, the remaining 12 days will be included in the accounts for the current half-year. The accounts up to June 19th show that the debit balance at net revenue

The Liberty National Bank
of New York

Accepts deposits drawing interest from foreign banks, firms and individuals.

Finances foreign shipments, secures customers against loss in exchange subject to approval of the transaction.
Buys and sells American and foreign securities.

120 BROADWAY NEW YORK CITY

London Correspondents

British Bank of Northern Commerce, Ltd. *Barclay's Bank, Ltd.*

account was increased from £695,400 to £804,900. From the summary of the agreement given in the report it would appear that the company is obtaining satisfactory terms with the Government in the matter of compensation. The Government agrees to pay the value of all goods and materials taken in November, 1914, and in April, 1917, less the value of goods and materials handed back in September, 1916, and in June, 1920, and of locomotives and rolling stock destroyed or damaged, and the cost of the repair and reconstruction of all stations and buildings destroyed or damaged. Claims arising out of damages caused by the revolution are to be submitted to the Claims Commission set up by the Government. The company is to accept monthly payments of $200,000 (U.S. currency), beginning in January, 1921. The Government grants freedom from Customs duties for a period of five years on all imports of materials and goods to be used for the purposes of the company. Estimated earnings from June 19 to the end of September are $832,700, and the outlook for traffics is said to be good, although the company is hampered by a deficiency in the supply of rolling stock. The report states that the country is in a more peaceful state than it has been for the past ten years.

Anglo-Persian Oil.—The report of the Anglo-Persian Company, in which the British Government holds a large interest, shows an increase of over 50 per cent. in profits for the year ended March 31st last, as compared with the previous 12 months. The profit, after allowing for depreciation, was £3,577,600, as compared with £2,287,900. Owing to a large increase in the amount issued, interest on debenture stock required nearly twice as much, income-tax rose from £125,200 to £430,400, and the estimated royalty payable to the Persian Government increased from £55,400 to £322,500, while expenses of the new issue of capital, stamp duties, &c., absorbed £233,300, and as a result the amount available was only £367,500 higher. The following table shows profits and distribution since 1913-14 :—

March 31.	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.

The preference and ordinary capital were increased during the year by £3,000,000 and £3,075,000 respectively, the preference shares being issued at a premium of 3s per share. This made the paid-up capital £5,000,000 preference and £6,075,000 ordinary, the British Government holding £4,050,000 of the latter, and the remainder belonging to the Burmah Oil Company. The preference shareholders receive their maximum dividend of 8 per cent., while the ordinary rate is raised from 10 to 20 per cent. The balance carried forward is subject to excess profits duty. The special appropriation of £50,000 is a donation to Cambridge University, presumably for the endowment of research. The balance-sheet, which is analysed in another column, shows a decrease in deposits by other companies of £1,306,500, an increase in property, refinery, pipe line, &c., of £1,748,900, of £1,488,300 in debtors, and of £592,000 in cash. Advances to associated companies, £2,977,700, appears for the first time, while a claim against the Persian Government for £272,600 has been wiped off. A number of items in the report shows how the company is expanding its activities. The company has acquired an interest in the Scottish American Oil and Transport Company, and has undertaken its technical and commercial management. "Commonwealth Oil Refineries, Limited," has been formed, with a capital of £500,000, jointly subscribed by the Commonwealth Government and the Anglo-Persian Company. Agreements have been completed for the formation of a French company, with a capital of 100 million francs, to be jointly subscribed by French interests and the company. A large interest has been taken in "The British Oil Bunkering Company, Limited," with a capital of £1,200,000, and the company has formed a subsidiary, "The Tanker Insurance Company, Limited," with a capital of £100,000. The company, through its subsidiary, the D'Arcy Exploration Company, is prospecting in various parts of the world.

India-Rubber, Gutta-Percha's Year.—The India-Rubber, Gutta-Percha and Telegraph Works Company, Limited, has just issued its reports and accounts for the year ended September 30, 1920. As will be seen in our table given below, profits have slightly improved.

September 30.	1913.	1914.	1915.	1917.	1918.	1919.	1920.

Ord. dividend	37,500 (7½ %)	25,000 (5 %)	50,000 (10 %)	70,000 (10 %)	50,000 (10 %)	50,000 (10 %)	18,750 (2½ %)
Carry forward	7,455	1,033	18,938	59,866	90,955	100,368	142,418

Only the interim dividend has been paid. The report states that, "with regard to the ordinary shares, although the accounts show a disposable book balance amply suffi-

cient to pay the usual dividend, the directors feel obliged to defer recommending the payment of a further dividend owing to the present scarcity of cash. This has been brought about by the large cash payments they have been compelled to make to the Government for excess profits duty and income-tax, and also to the higher costs of raw materials and labour which have gone to form our present stocks. The directors, however, hope it may be possible later on to pay a six months' dividend to the ordinary shareholders out of the balance shown at the end of the year, the accounts for which are now presented." The directors are pursuing a wise and prudent policy. Shares in other companies, &c., are valued at £100,599. The auditors to the company, in giving their certificate, state that it is "subject to the correctness of the value placed on the assets in France and the shares in other companies, as to which we are unable to certify." They proceed, however, to say that these are "amply provided for by the reserve fund."

Roumanian Consolidated.—The decision in the Court of Appeal reversing the judgment of Mr Justice Darling in favour of the Roumanian Consolidated Oilfield, Limited, in their claim against the British Government for compensation amounting to over £1,250,000 naturally caused a sharp fall in the price of the shares. The £1 shares, however, are no lower than 13s, and it would appear, therefore, that it is anticipated that the case will be taken to the House of Lords. Compensation, it may be recalled, was claimed for the destruction of the company's property in Roumania, which was carried out by the Allies to prevent it from being of any use to the Germans when Roumania was invaded. Lord Justice Bankes, in allowing the appeal of the Crown, said that he was of opinion that the suppliants had failed to prove any arrangements or agreement that their claim for compensation should be met or paid directly by his Majesty's Government, or that compensation should be claimed in the form in which it was now put forward. He came to the conclusion with regret, because he found the officials of the company had acted under circumstances of great difficulty, doing, as he thought, their best for their employers, and at the same time doing their duty to their country.

Transvaal Output for November. — The November statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 633,737 ounces as compared with 662,472 ounces in October and 677,970 ounces for November, 1919. The following table shows the production for a number of years past :—

	1916.	1917.	1918.	1919.	1920.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.

Oversea Correspondence.

UNITED STATES. — FOREIGN AND OTHER NEW FINANCING PENDING — CONCERTED ACTION AGAINST CANCELLATION OF CONTRACTS — SEGREGATION OF SOUTHERN PACIFIC OIL PROPERTIES.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 3.

THAT conditions are again becoming favourable for new financing is indicated by the fact that some large loans and issues of new securities are now being arranged by bankers, and in all probability will be announced shortly. These include a loan of some $30,000,000 to the Brazilian State of Sao Paulo, an offering of $35,000,000 10 or 15-year securities of the Goodyear Tire and Rubber Company, and an issue of $25,000,000 securities of the Standard Oil Company of California. Other financing is also being discussed by bankers and corporate managements, notably that in connection with the sale of the American Linseed Company to Lever Brothers, of England, and the capital readjustment of the company, while a loan of substantial amount may be made to Cuba. The proposed $30,000,000 loan to Sao Paulo, which is being negotiated through the so-called South American group of local banking interests, including J. P. Morgan and Co., the National City Company, the Guaranty Trust Company, Harris, Forbes, and Co., and Lee, Higginson, and Co., is expected to be a straight loan, that will not be secured by coffee, and will not be a part of any valorisation plan, as was at one time suggested. The Government is understood to be opposed to any valorisation project. With the exception of the recent offering of $25,000,000 Canadian National Railway securities, which were quickly taken, no new foreign issues have been floated in this market during the past fortnight or so, but some European financing is understood to be under consideration, and may be announced in the near future.

This week's statement of agricultural exports in October, issued by the Department of Commerce, throws further light on the unusually large increase in that month's total exports. It now appears that of the $146,000,000 increase over September, crude materials to be used in manufacturing, and consisting chiefly of cotton, accounted for $54,000,000, foodstuffs for $28,000,000, and manufactured articles ready for consumption $56,000,000, the latter being a new high record for the current year. Of the $120,000,000 increase in total exports over October, 1919, the principal gains occurred in the same commodities. The fact that exports of manufactures increased so heavily at a time when foreign markets were extremely weak and unsettled is one of the most surprising features of our foreign commerce in October. One explanation offered for the larger shipments is that rail transportation conditions had improved to such an extent during last autumn that merchandise which had been held up throughout the country owing to the widespread freight congestion was then rushed to seaboard and shipped abroad in that month, whereas under more normal transportation conditions the overseas movement of such goods would have taken place earlier in the season, or at least a large part of it. Furthermore, manufacturers and other producers made every effort last autumn to deliver goods to purchasers, in order to forestall cancellations. In this connection, it is interesting to note that the cancellation of contracts has reached proportions of national importance to manufacturers and wholesalers in this country, as is evidenced by the fact that textile interests, who have apparently suffered to a greater extent than others, are taking concerted action in the matter. Delegates representing practically all the leading textile associations and allied organisations east of the Mississippi River met here this week, and decided to form a National Bureau of Commercial Contracts. The avowed objects of the bureau, which, it is expected, will be organised and put into operation at an early date, are to establish a uniform type of commercial contract; to provide for arbitration of all disputes arising under such

contract; to conduct a campaign of publicity, emphasising the evil consequences arising from the cancellation or other breach of contract between buyer and seller; to endeavour to effect such necessary and desirable changes in State and national laws as are essential to the just enforcement of contracts, and to uphold the integrity of American business ethics.

The plan for the segregation of the Southern Pacific Company's California oil lands and of the separation of the stock holdings in the Associated Oil Company from the railroad properties, announced this week, reveals the cutting of a "melon" such as investors have not known for many years. The segregation plan, which in some respects is unique, may be summarised as follows:—A new company, to be known as the Pacific Oil Company, will be organised, with a capital of 3,500,000 shares of no par value, for which the Southern Pacific Company will subscribe at $15 per share, or $52,500,000. From the amount so realised the new company will purchase from the Southern Pacific Land Company, as on January 1, 1921, for $43,750,000, (*a*) about 259,000 acres of land in California now owned by the Southern Pacific Land Company, and (*b*) 200,690 shares, par value $20,067,000, representing 50.48 per cent. of the outstanding capital stock of the Associated Oil Company. By the sale of these properties, the Southern Pacific Land Company, the entire capital stock of which is owned by the Southern Pacific Company, will receive $43,750,000 in cash, and the Pacific Oil Company will retain $8,750,000 as working capital. Shareholders of the Southern Pacific Company will be given the right to purchase at $15 per share one share in the new company for each share of Southern Pacific Company held at the close of business January 14, 1921. In this way Southern Pacific stockholders will get for $52,500,000 oil properties which Government experts have variously estimated to be worth between $500,000,000 and $750,000,000. As a great deal of the land is undeveloped, however, its actual value cannot be stated definitely. The segregation plan has not had an enthusiastic reception in all quarters. It is undoubtedly disappointing to those who had expected that shares in the new oil corporation would be distributed without cash payment therefore being required. Virtually, Southern Pacific stockholders are asked to pay for something they already possess.

FRANCE.—PUBLIC FINANCE—ESTIMATES REDUCED—ARREARS OF TAXATION—REVENUE—TAX ON TURNOVER—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, December 14.

THE Finance Commissions of the Senate and the Chamber are making persistent and successful efforts to reduce as drastically as possible the Estimates that have been laid before them in connection with the Budget for 1921. The policy these two important Commissions have adopted, and the manner in which their operations have received the support of public opinion, is a further proof that, in following the example set by M. Millerand himself, who not long ago summoned the Finance Minister, M. François-Marsal, to the Elysée, and induced him to consent to substantial reductions in the Estimates, even before they took their final form, the members of the Senate and the Chamber have both resolved to do their utmost in this direction to assist in the restoration of France to her former great financial position.

The Finance Commission of the Chamber has already held over 50 sittings for the purpose of pruning the Estimates, and has so far cut down the estimated expenditure for the coming financial year by over 3,000,000,000f, which was what M. François-Marsal anticipated would be the deficit for 1921, unless fresh taxation were imposed. Both Commissions, however, like the Minister himself, have set their faces against any increase in the already onerous burden of taxation, and they have also determined that the coming year, if in any way possible, shall not only be free from a deficit, but shall finish with a surplus. To this end the two Commissions are now engaged in an effort to effect substantial reductions in the Estimates put forward by the two great spending departments—those of the Army and Navy. Here, of course, much depends upon the political situation in the Near East. One reason for the growing movement in favour of the modification of the Treaty of Sevres in favour of Turkey (for which the downfall of M. Venizelos has provided an opportunity, in view of the changed situation of Greece) is that the restoration of a substantial part of Asia Minor to Turkey (and particularly the Smyrna district) would render possible the withdrawal of the large army which France has at present to maintain in Silecia, together with a reduction of the expenditure of 800,000,000f, which the occupation of Syria and Silecia is estimated to cost during 1921.

The reductions asked for by the two Commissions have been accepted by the Finance Minister, in a statement made to the Chamber, so that it may now be assumed that the total estimated expenditure stands at 24,800,000,000f, instead of three milliards higher. The reductions effected so far have been due to the determination of the Finance Commissions of the two Houses not only to vote no new taxation, and to bring about a balance of revenue and expenditure, but also to ensure that the 30 milliards which are understood to have been subscribed to the new loan shall be devoted entirely to the development of the national economic requirements and the reconstitution of the devastated regions.

Figures issued by the Finance Department show that down to the end of November, out of a total outstanding amount of 1,698,579,000f in respect of unpaid direct taxation, 610,506,600f had been recovered. The total amount of demands issued in respect of war profits down to the end of November was 9,322,079,600f, of which 5,220,718,500f is in respect of demands made since the beginning of the current financial year. The amount payable was 4,980,199,100f, of which 4,023,620,500f has been recovered. The amount of the demand notes issued for income-tax down to the end of November was 22,594,000f, of which 10,785,100f was in respect of the general tax, 9,036,200f in respect of trade profits, 2,201,300f in respect of salaries and wages, 368,900f in connection with incomes from liberal professions, and 202,500f from agricultural profits. The yield from the liquidation of war stocks, January-November 30th, was 1,544,220,800f.

The returns showing amount of revenue derived from indirect taxation and State monopolies for the month of November, which are issued to-day, indicate that the progressive increase of receipts under these headings is continuing. The total amount received was 1,087,985,100f, or 350,160,000f in excess of the corresponding month of 1919. The total yield for the first eleven months of the year from the sources comprised in the return (which does not, of course, include the income-tax and other taxes) is now 1,705,430,000f more than budgetary expectations, and 3,766,667,400f more than the yield for the corresponding period of last year.

The growing difference between the expected and the actual yield from the tax on turnover (*taxe sur le chiffre d'affaires*) is beginning to excite some alarm, as this form of taxation had been relied upon to afford the possibility for relief under other headings in the future. The deficit on the yield for November (which was derived from transactions during October) was some thirty millions less than that for the previous month. The total yield for the four months since it came into force has been 732,717,500f, or 54 per cent. less than expected by the Finance Minister for that period. Much of this difference is to be accounted for, of course, by the fact that the public has largely restricted its purchases owing to the continued high prices of all commodities. There are rumours, however, that methods for "getting round" the new tax are being adopted in many transactions, and already proposals are being put forward for its modification in the direction of a heavier tax on transactions connected with imported goods, with corresponding relief in the case of transactions in French-produced goods.

The heavy depression from which every phase of French industry has been suffering has, unfortunately, very strongly marked the French Bourse this week. In view of the commercial situation there has been a considerable amount of realisation of securities, and in consequence a

general fall in prices. The pound sterling has appreciated during the week from 57.58 to 58.66. Banks have shown a fairly serious decline, Crédit Lyonnais dropping from 1,550 to 1,384, Banque de Paris from 1,550 to 1,435, Union Parisienne from 1,040 to 970, and Crédit Mobilier from 504 to 492. Railways have shown little animation; thus Nord, which was at 910, is now 880; Orléans, which was at 815, is now 801; but P.L.M. is stronger at 735 as against 720. Electrical undertakings are rather weaker, Thomson-Houston standing at 850 as against 906, and Société Générale de l'Electricité at 940, as against 975. Metallurgical shares are weaker, Longwy dropping from 1,460 to 1,425 and Micheville from 1,490 to 1,460, but there have been exceptions, St Nazare rising from 1,475 to 1,185 and Creusot from 2,800 to 2,825. Despite the fact that minerals are rather stronger, mines for the most part have dropped. Thus Tintos are at 730, as against 760, and Penarroya at 1,088, against 1,188. Petrol has not escaped the general tendency, and Mexican Eagles, after violent fluctuations, closed at 626 as against 630. Royal Dutch also dropped, and fell from 34,050 to 32,300, while Shells fell away from 366 to 356.

The returns of the Bank of France for last week, the previous week, and the corresponding week of 1913 are as follows :—

GERMANY.—CABINET TROUBLES—EXCHANGE AND BOURSE — SHIPPING—FOOD SUPPLY — LAW AGAINST ENTAILS.

(FROM OUR CORRESPONDENT.)

BERLIN, December 11.

THE Fehrenbach Cabinet has survived a new crisis, this time caused by its unwillingness to grant the full demands of officials for salary increases and family allowances. The German-Nationals, who are not represented in the Cabinet, proposed in the Reichstag Commission an extra "high prices allowance" of 10 per cent. for certain classes, as well as large allowances for children; and there was a risk that this demand would be pushed with Socialist support, thereby putting the Cabinet in a minority. The conflict has been peacefully settled in part, owing to the refusal of the German Officials' Union to countenance a strike. With the present depreciation of the mark as against gold, officials receive only between a third and a sixth of their pre-war salaries, the higher ranks being worst off, but the cost of living has risen less than the mark's gold value has fallen. The Cabinet is in further difficulties through its drastic measures taken against breakers of the food laws. A Berlin hotel director was lately sentenced for this offence to nine months' imprisonment, and since then there have been numerous raids on hotels and restaurants, abundant evidence being found that food products are illicitly bought and sold, and that the ration and price restrictions are universally violated. In protest against raids, prosecutions, seizures of books, and other measures some of the biggest Berlin hotels and restaurants have suspended business, and further stoppages are threatened. In the hotels guests remain, but get no food. The Government measures, which are strictly legal, threaten widespread unemployment, and they are criticised on apparently good grounds, chiefly that these offences are universal; nearly every citizen either practises or encourages them. The Food Minister, Dr Hermes, last week admitted that the State's authority in enforcing rationing and maximum prices is steadily declining, and added that the consumers themselves help sellers in violating the law. The Berlin Statistical Bureau regularly includes in its typical family budgets a proportion of expenditure on goods bought illegally in "Schleichhandel." The Government lately submitted a Bill increasing the penalty for this offence to 15 years' penal servitude. Prosecutions mean that a handful suffer for what the majority practise with impunity. Hotels and restaurants, everyone knows, conduct their food business illegally; but behind them, down to the farmers, who evade sale at legal prices, is a long chain of intermediary law breakers. The Government's own policy acts as an incentive to these offences, as prices are fixed for relatively long periods on a basis of supposed reasonable profits, but the headlong inflation soon makes it impossible to sell at these prices without loss.

The foreign exchanges in the past week again rose, but so little that no visible influence was exerted on the Bourse. The other Bourse influences were partly favourable, partly unfavourable. The Reichsbank report for the week ending November 30th is again bad, showing an increased credit strain and heavily increased paper circulation. The Bank's holding of bills rose by 5,792,400 marks to 55,574,600,000 marks, as against 34,226,286,000 marks in the same week of 1919, while deposits increased by 4,232,559 marks to 17,339,931,000 marks. The circulation of notes and Kassenscheine rose during the week by 1,679 millions. Savings bank reports show a continuing decline in the rate of growth of deposits. The increase in deposits in October was 250,000,000, as against 700,000,000 marks in September and over a milliard a month in the summer. The total deposits in 315 savings banks at the close of October were 16,051,000,000 marks. The industrial capital market is again, as a result of the trade revival, very active. In November, according to a private bank report, ordinary and preferred stock and debentures were issued to a total of 1,574,000,000 marks, as against 652,000,000 marks in October. The November total is not far short of the total issues in all three last months of 1919. The movement in favour of issuing preferred stock with double or more the usual voting power, with the aim of preventing the gaining of control by foreigners, is still increasing. In 1920 over 600 companies have taken this step. Many critics condemn this policy. The latest, the Berlin *Boersen-Zeitung*, declare that a restoration of the national industry is possible only if foreign investments provide funds for the import of raw materials. A favourable factor is the increase of employment. The number of publicly supported unemployed on November 15th was 349,243, a decrease of 11,826 since 1st of the month. The coal output is slowly increasing. Production in October is reported at 11,869,000 tons, of brown coal 10,492,000 tons. Figures for the first ten months of the year are 107,606,000 tons and 91,614,000 tons respectively, as against 95,806,000 tons and 77,614,000 tons in the same months of 1919. Considerable effect on the Bourse was produced by a pessimistic forecast by Privy Councillor Kloeckner, the head of a vast metal and coal trust which has grown out of the

Lorraine Smelting and Mining Company. Herr Kloeckner predicted that the business crisis which has struck America will also soon affect Germany, and implied that in the iron branch France, owing to a better coal supply, has badly beaten Germany.

The Bourse during the week had no marked trend. The average quotations of the loans and stocks usually chosen for comparison was on December 4th 15,625 marks against 15,664 marks on November 27th, and 9,557 marks on June 1st. Iron and coal stocks mostly declined a little; stocks of certain engineering and mechanical concerns rose, also electrical and aniline stocks, the latter though the English Bill for licensing of dyes imports was taken unfavourably, and led on the 10th to considerable selling. Oil stocks were active, the main cause being that the Deutsche Erdoel Company, which owns Germany's only mineral oil field (Wietze in Hanover), and which leads in the rapidly growing brown-coal oil distillation industry, is about to treble its capital. The other chief oil concern, Deutsche Petroleum, is also raising its capital. Rumours of combinations concerning these companies and certain Dutch capitalists have kept the oil stocks market in sharp fluctuations for a couple of months past. Federal loans mostly declined during the week, the 4 per cent. from 66.90 to 66.75, the 3 per cent. from 67.40 to 67.10, the Colonial 4 per cent. from 76 to 74.30. The 3½ per cent. Federal Loan rose from 59.10 to 59.75, and the 5 per cent. War Loan remained unchanged at 77.50.

As a result partly of the American deals of the Hamburg-American and Norddeutsche Lloyd lines, partly of chartering, and partly of home building, German shipping is beginning to look up. The building of big ships is retarded by coal shortage, but the supply of iron and steel to the yards has been improved by the entry of nearly all important building concerns into the trusts of Stinnes, Thyssen, Krupp, and other "Schwerindustrie" magnates. The question of compensation to the companies for lost shipping has not yet been settled. The compensation sum proposed is 17 milliard marks. The companies have nearly all increased their capital, but not sufficiently to meet the greatly increased cost of building. Ships are mostly being built on serial lines. Some yards are building big sailing ships, with auxiliary motors. The tendency in general is to build middle-sized freight steamers and motor-ships, sometimes with simple passenger accommodation. All the more important steamship companies are now making regular tours, mostly with chartered ships. In the West African service are the Woermann, Ostafrika, and Hamburg-America companies; in that with the east coast of South America, the Hamburg-South America, and Hamburg-America lines, the latter using Harriman vessels, and the Norddeutsche Lloyd with two new ships of its own. With North America is the service of the Hamburg-America line in collaboration with Harriman, and the Norddeutsche Lloyd in collaboration with the U.S. Mail Company; with Spain and Portugal the Hansa Company; and the Oldenburg-Portuguese Steamship Company; with the West Mediterranean the Sloman Company, and with the East Mediterranean the Levante Line, which has chartered two new Hamburg-America vessels; with British India the Hansa Company; and with the Dutch Indies the Austral Line, working with the Rotterdam Lloyd and Nederland Company. The Hamburg-America Company has established a service with Cuba and Mexico, with small steamers of its own. The services to East Africa, East Asia, and Australia have not yet been resumed.

The food question is causing increasing trouble. Re-estimates of the harvest of bread grains put the total as low as 5.7 million tons, and the Federal Breadstuffs Department declares that at least 2,520,000 tons must be imported. The former Minister, Dr August Müller, this week declared to the "Reichswirtschaftsrat" that the present system of State management cannot be maintained. Despite the large imports, which heavily burden Germany's foreign payment balance, bread continues to be bad, and in West Germany sometimes contains only 20 per cent. of rye or wheat. The Government plan for the coming year foresees the use of large quantities of maize and barley. The farmers persistently evade delivery of their legal quota, and sell bread grains illicitly, or use it to feed stock, which (as maximum meat prices were abolished on October 1st) is an indirect way of getting a higher price than the legal maximums of 1,400 marks a metric ton for rye and 1,540 marks a ton for wheat. The Food Minister complains to the Reichstag that whereas 1,116,000 tons of breadstuffs were delivered by farmers by December in 1919, this year the deliveries so far are only 288,000 tons. Bread made of foreign flour, added the Minister, costs the State 15.25 marks per 1,900 gramme loaf, while the sale price of this loaf is only 4.50 marks. At that rate, the total cost of the "bread-cheapening subsidies" up to August, 1921, will be 9½ milliard marks. During the past year a "price-cheapening subsidy" of 19-21 marks per lb has been paid on margarine. The Government has again refused to abolish State control over and trading in breadstuffs, butter, sugar, and milk. It declares, however, that the abolition of control of other food-products has been entirely a success.

Prussia has got through a law providing for practically complete abolition of entails, and for dissolving great estates. The death of a tenant for life after April 1, 1921, means that entailed land becomes free land in the hands of his heir. After April 1, 1923, the compulsory gradual dissolution of great private land funds will begin. With the dissolution of entailed estates will be compulsory provision for female members of the last tenant for life's family; and in special cases remoter relatives will be compulsorily provided for. Provisionally, tenants for life will be allowed to dispose of property without consent of the heirs if they get official permission, which will be granted when dissolution of an estate favours land settlement. Provision is made against the cutting up of such entailed forests as constitute economic wholes, and against dispersions of art collections which are part of the entail. For all these purposes are created special "Dissolution Boards," consisting of three jurists, a representative of the Ministry of Agriculture, and a representative of the interested private individuals.

AUSTRIA. — DR GRIMM'S SPEECH — AUSTRIAN HUNGARIAN CONFERENCES IN BUDAPEST — THE AUSTRO-HUNGARIAN BANK.

(FROM OUR CORRESPONDENT.)

VIENNA, December 8.

THE new Minister of Finances, Dr Grimm, in a speech in the National Assembly on December 3rd, explained his plans and proposals. It is rather curious, he said, to speak of proposals and measures for clearing up the State's desperate financial situation at a time when the deficit is about 25 milliards of crowns. In January, 1920, the Budget anticipated a deficit of 10 milliard crowns, but the rising of foreign exchange, and the continuing increase in the prices of coal and foodstuffs in the National States had doubled this sum. Dr. Grimm pointed out that though economy is absolutely necessary, the imports of foodstuffs and coal are essential to life in this country. The imported foodstuffs, together with the products of Austria, in the best case will only give the smallest ration of food. The imported coal will only ensure part of the necessary gas and electric light, and the work of a very small proportion of some industries. It is clear, he added, that real help for reconstruction of financial and economical life can only be brought by means of foreign credits given in money, foodstuffs, and raw material. But Austria herself wishes to do her best. The capital levy, or a considerable part, will come in during the next few months, and every effort will be made to employ the proceeds solely for diminishing the increasing inflation of banknotes, for consolidating the State's credit, and for paying back some old and very urgent debts of the Government. Besides, he promises some increase of the Government's income by means of the monopolies (tobacco, sugar, mineral waters, &c.).

The Minister of Commerce has been at Budapest trying to arrange good relations with the Hungarian Government, and a commercial agreement for the exchange of foodstuffs and industrial articles between the

two countries. But—as it seems—his travel has not been very successful.

On December 18th there will be in Vienna an extraordinary session of the Austro-Hungarian Bank. The General Council wishes to get the consent of the shareholders to continue the purely banking business of the bank, while the issue department, in agreement with the Peace Treaty, is to be liquidated. There is some hope that out of the well-regulated organisation of the bank, by means of foreign capital, a new institution will arise which will get a new privilege for issuing banknotes in new Austria.

SWITZERLAND.—BALANCE-SHEETS AND GERMAN ASSETS—ELECTRO-CHEMICAL INDUSTRY.

(FROM OUR CORRESPONDENT.)

GENEVA, December 9.

As we approach the end of the year, the Swiss mortgage banks having investments in foreign, chiefly German, mortgage securities have considerable headache as to the dressing of the balance-sheet. Last year the Federal Government helped at the last moment by granting them the right of creating an artificial technical asset item called currency-depreciation, which has to be written down within 20 years. In the last year's balance-sheet several important Swiss mortgage banks showed in their assets German mortgages in "goldmarks." These are not the famous goldmarks invented by the Versailles Treaty, but a remainder of the time when the German currency was still unstable before 1866. For traditional reasons some elder Swiss banks continued to grant mortgage loans to German debtors only in goldmarks. Now, the German courts lately made decisions, which are from the German point of view only logical. They simply denied the correctness of mortgage debts in currency other than German, and consequently gave the German debtor the right to redeem his obligations in ordinary paper marks, involving his Swiss creditors in a loss of 90 per cent. Then the Swiss Government interfered, and there were diplomatic negotiations. After long deliberations, the German Government agreed to prohibit the redemption of goldmark mortgage debts by paper marks for at least ten years, under the condition that the Swiss creditors do not ask back their money before the German mark has a value of 50 Swiss centimes. This arrangement protects the Swiss creditors against individual abuse by German debtors, but does not give any material advantage to the Swiss banks in question. The depreciation remains a matter of fact, but a term of 10 or 15 years is granted for amortisation.

The production of calcium carbide and of the organic products of it, chiefly alcohol, vinegar, and various acids, suffers from the very dear coal. For example, the Lonzawerks, the biggest Swiss producers, declare in their annual report that the output of alcohol, vinegar, and calcium carbide out of imported coal and limestone no longer pays. Fortunately for the works in question, there is a keen demand for electric energy in all parts of the country, so that they find their profit in simply selling their electric current. But it is a pity that the high prices, which Switzerland has to pay for foreign coal, practically annihilates the results of years of scientific and technical research.

DENMARK. — FOREIGN TRADE — COMMERCIAL NEGOTIATIONS WITH ENGLAND—LOWER FOREIGN EXCHANGES.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, December 10.

THE figures for imports and exports show no great change for the month of October, the former being nearly twice the amount of the later; exports amounted to 156,000,000 kr, and imports to 301,000,000 kr, the aggregate of the former up till the end of October being 1,448,000,000 kr, and of the latter 21,686,000,000 kr, but matters are somewhat better than they were in 1919.

The result of the Danish Government delegation's visit to England is stated to have been satisfactory, and a second more industrial delegation will shortly visit England in order to endeavour to arrange an agreement for trade between the two countries. The British Government is understood to have shown a clear conception of what was in the interests of the two countries, which applies both to the export of British coal to Denmark and to abolition of restrictions in the matter of import into England of Danish produce, which restrictions are likely to be removed in the near future. In the meantime Danish industries are faring none too well; foreign competition is being keenly felt, and buyers are holding back in anticipation of lower prices.

Foreign exchanges, more especially £, $, and gulden, have experienced rather a sharp set-back, £ being yesterday down at 23.10, $ at 671.00, and gulden at 205.00. but a reaction seems already to have set in, and to-day exchanges were respectively 23.25, 676.00, and 206.50. Francs are 40.25, and marks at 9.35. The foreign exchanges quoted on the Copenhagen Stock Exchange will for the future include those of Rome and Madrid.

Letters to the Editor.

TRADE AND MODERN LANGUAGES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The chief commercial language of the world, outside the British Empire and the United States, is undoubtedly Spanish, and it is also true that one of our main objects, to-day, is to secure foreign trade.

I was, therefore, surprised to be informed that the parent of a boy attending a London commercial school, belonging to one of the City companies, on making recent inquiry concerning the Spanish language, received the reply that the curriculum of the school authorities was already filled without it.—Your obedient servant,

101, Piccadilly, W. J. LANDFEAR LUCAS.

Books and Publications.

REVIEWS.

"Income-tax, Weights and Measures, Stamp Duties, and Coinage, 1920; British, Colonial, and Foreign." (London) National Bank of South Africa, Limited.

THE world-wide statistics on income-tax given in this book would be sufficient reason in itself for us to commend it to our readers. There is, however, one reservation we should like to make. Events are transpiring so rapidly in matters of taxation throughout the world that any writer on the subject will find it an impossible task to keep pace with the rapid changes in an annual publication. The illustration of the various coinages of the world should prove most useful to travellers. Weights and measures and stamp duties are exhaustively dealt with. Interesting details are given of the progress of the metric system movement in this country. Naturally, special attention is paid to the Union of South Africa in the course of its pages. This is a handbook which should be found in every busy office. The only improvement which we could suggest would be a better index to this mine of information.

"The Revival of Marxism." By J. Shield Nicholson, Sc.D., LL.D., Professor of Political Economy in the University of Edinburgh. John Murray. 6s net.

"POPULAR feeling has been, and is, excited by the fortunes made in the war and by the glaring extravagance of the new rich. The 'war fortune' is certainly one of the chief contributory causes of the revival of Marxism. From this point of view it is unfortunate that the special taxation of 'war fortunes' is considered to be impracticable." This view that the social effects of the profiteering during and arising out of the war have helped to revive the popularity of the Marxian doctrines often recurs in the pages of this timely little book, in which these doctrines are subjected to searching analysis. Professor Shield Nicholson is able to show from quotations from Marx's own followers

how inconsistent his teaching was, and how slender and shifting was the foundation on which he built, and he also provides plenty of sound criticism of his own, especially in his contrast between the effects of any attempt to put Marxism into practice with the more constructive reforms that have improved the lot of Labour in the last century.

"Interim Report on Methods of Freezing Fish, with special reference to the Handling of Large Quantities in Gluts." Published by H.M. Stationery Office. Price, 1s 6d net.

PRESENT methods of travelling and distributing fish in this country have long been recognised to be wasteful and inadequate, and this report on the subject by a strongly manned committee is worthy of the attention of all who are interested in the subject. The proposals put forward in the report are ingenious, and very carefully worked out. But the last paragraph on page 41 raises doubts :—"It is certain that a plant capable of freezing large quantities of fish will not pay if it be used only in times of glut." Will it pay at all? Experience shows that the public does not love frozen fish—a fact which suggests that solution lies less in the direction of artificial conservation than in improving both the range and speed of distribution methods. A suggestion that, at times of exceptional glut, municipalities should arrange to take over surplus catches and sell at cost, plus expenses, is possibly worthy of consideration, in spite of some obvious objections. But here again speed is the all-important matter, and a great improvement on present distributive methods would be essential.

BOOKS RECEIVED.

The Economic Journal. December, 1920. (London) Macmillan and Co. 5s net.

Those interested in current financial problems will find the December issue of the *Economic Journal* well worthy of attention. Three important articles are included by writers who are acknowledged authorities. Professor Pigou writes on "Some Problems of Foreign Exchange," Mr Wyse deals with the "Selling and Financing of the American Cotton Crop," while Mr Siepmann discusses "The Brussels Conference."

Pax Economica. Par Henri Lambert. (Bruxelles) Maurice Lamertin; (Paris) Felix Alcan.

The sub-title may be translated—"International Free-trade the necessary and sufficient foundation of universal and permanent peace."

Le Nouveau Contrat Social, ou l'Organisation de la Democratic Individualiste. Par Henri Lambert. (Bruxelles) Maurice Lamertin; (Paris) Felix Alcan.

Autobiography of Andrew Carnegie. (London) Constable and Co., Limited. 25s net.

Coal. By J. H. Ronaldson. With Maps and Diagrams. (London) John Murray. 6s net.

Prepared under the direct on of the Mineral Resources Committee of the Imperial Institute. This is an interesting description of the origin and growth of the coal industry in each country, and of the great progress made in the chief producing countries during the last 50 years. There are also general tables giving the annual coal production for recent years of the principal countries of the world, domestic consumption, imports and exports, and actual and probable reserves; also a table of coal reserves shown by continents, the British and foreign totals being separately tabulated.

BARCLAYS BANK
LIMITED

(with which has been amalgamated the London Provincial and South Western Bank Ltd.).

Head Office: 54, Lombard Street, London, E.C.3

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with
THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 29.	December 30.

For most practical purposes, the week just ended is the last in which business could be expected to come to the Stock Exchange this year. The House is closed on Christmas Eve, and the week following will consist of four business days only. This is fully recognised by people who have stock to sell. The banks are still pressing customers to pay off their loans at the end of the year. New York has been in an irritable and an exciting mood. The franc has fallen to a level at which it is worth barely more than 4d. These are influences which made for erratic and depressed markets, few departments escaping from the effect of one or the other influence. There is some little talk of money becoming easier in the New Year, but this had no effect upon the gilt-edged list, where prices have been frankly flat. The War Loan is at the lowest level touched since the stock was issued. The various stocks of the sevenfold corporation loan have marked out their own particular paths, and the Bournemouth Sixes are nearly up to their "par" price of 95½, while Rotherham Sixes and Bootle Sixes stand about 93. English Railway debentures and preference stocks remain steady, marked with a fair amount of inquiry, for the debentures in particular, round about a 6 per cent. basis.

With the value of the franc so low, French Fives and Fours gave way again, but a few buyers came in at the lower prices, and there is still talk (rather than hope) of some part of the recent French 6 per cent. Loan being offered on this side in order to give holders of the present bonds a chance of subscribing on the same favourable terms as those which governed the recent issue in France. The tendency of the foreign market has been dull to heavy, with Brazilians, Chinese, Argentine, and Japanese sterling bonds mostly lower. A further marking down of Russian descriptions occurred, and Peruvians, with Rio Tintos, suffered with the rest.

Home Railways ordinary stocks could not withstand the prevailing influences, and in the absence of investment demand prices quietly sagged. Districts have been flat, and Underground income bonds lost their previous improvement. Scottish stocks are lower. Grand Trunk guaranteed is quoted ex the half-yearly dividend; the market for the junior stocks is a little firmer. Mexican Rails are heavy, and in Argentines a little offering of stock on behalf of holders, obliged to realise something in order to meet engagements elsewhere, has resulted in mild declines. Nitrates are still oppressed by the fear of some of the producing companies having to suspend operations next month.

Raw rubber has gone a little below 1s per lb. The mid-monthly settlement in Mincing Lane, which had been anticipated with no little apprehension, has passed without disclosure of any particular trouble, but the share market is none the better on this account. Rubber companies are passing their dividends too frequently for confidence to be encouraged in regard to the immediate outlook for the industry, and the

leading shares are distinctly flat. Oil shares came under the influence of the New York Stock Exchange, which has been dealing very largely in Mexican Eagles, Royal Dutch, and, less extensively, in Shells. Some in the Stock Exchange recall the days of the Yankee market, and point out that America is once more a live factor in the London Stock Exchange for the first time since the outbreak of war. Oil prices have been run up and down in accordance with the speculative feeling literally of the hour. Reports of financial trouble in Paris are still rife. Announcement of the Mexican Eagle bonus of one new share to be offered at $10 in respect of every two old shares now held was followed by a sharp dip in the price. It is, of course, this particular issue which has buoyed up the hopes of holders for weeks past who had looked to its announcement as a probable means for sending up the price of the shares. Dunlops gave way on heavy selling, which came from various directions, London and provincial. Courtaulds have gone below 40s, and other textiles are none too bright. The market for catering and stores shares is a little apprehensive of what may be the outcome of the present financial stringency. Liptons are taking powers to issue new capital, and the price has fallen to a shade below £1 ex dividend. In the shipping list P. and O. deferred is quiet, ex the dividend and stock bonus. Indo-China deferred gave way, in consequence of the slump in silver, and the same cause brought down the prices of various Far Eastern banking shares. The banking list, as a whole, is unstable and nervous. The insurance market is little better off so far as buying orders are concerned, and most of the prices show falls, small in extent, on the week. Of the various lately issued notes, those of the Ebbw Vale company gave way to 7¾ discount. Dealings have begun in the shares of Jute Industries, Limited, a discount being quoted on the 10s paid-up. Amongst armaments, iron, coal, and steel shares Consett Iron exhibit a fair amount of firmness, but other prices are mostly heavier. Electric manufacturing shares are dull, in consequence of the passing of the final dividend by the India Rubber and Gutta Percha Company. Marconis gave way, on sales by stale bulls, and even the cable group shows an inclination to ease off here and there.

The first batch of Kaffir dividends has now been announced, and no fault can be found with the distributions so far, all of which come up to favourable expectations formed in advance. But the market has derived no benefit. The November crushing and labour returns are far from satisfactory. Paris has been a seller of most things, and until a modicum of Cape buying assisted the list the market was in a stagnant and depressed condition. De Beers have been down to 12¼ before recovering to 13. They were 33 at one time this year. The spurt which occurred last week-end in Chartered proved to be short-lived. Other Rhodesians are dormant. Mexican mining shares gave some little sign of activity at first, but the passing of the preference dividend by the Camp Bird company cast the list into despondency again. The Zinc Corporation has also passed its preference dividend, and this served to deepen depression in Broken Hills. Burma Corporations gave way with other silver-affected shares, though there was a rally from the worst. The company's debentures, however, have dropped several points. West Africans are all but asleep, and the Ashanti Goldfields meeting, at which the chairman made an interesting appeal for the premium on gold to be turned into a permanent rise in the price of the metal, had no influence upon the price of the shares. There has been little doing in Malayan or Cornish tin varieties, and Russians, where they moved at all, gave way to a slight extent.

Stock Exchange shares keep about 103, and a Nomination, expiring next month, changed hands at £60 last Monday.

The Stock Exchange will be closed on Friday the 24th instant.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

	£	£
April 1 to December 11, £3,945,000	300,000 ..	300,000

5-15 Year Treasury Bonds (Series B).—Repayable a par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Jute Industries, Limited.—Authorised capital £7,000,000, divided into 4,000,000 9 per cent. cumulative participating preference shares of £1 each and 3,000,000 ordinary shares of £1 each, of which 3,000,000 preference and 1,500,000 ordinary shares have been issued. This is a statement issued to comply with the regulations of the London Stock Exchange. The consideration money is given as £4,473,810, "and interest on portions thereof at 6 per cent." Preliminary expenses (excluding certain commission) is stated as £80,000, and are payable by the company. No debentures or charges (other than the usual charges required by bankers for temporary loans in the ordinary course of business) may be created without the sanction of preference shareholders, but the preference shares carry limited voting powers. When the recent issue of preference shares was made, the "offer for sale" gave net assets as £8,158,217. We pointed out at the time that "investors should note that this is an 'offer for sale,' and not a prospectus, and that promotion profits are not disclosed." Although the disclosure of the purchase price puts a better complexion on the offer, we are not enthusiastic about the shares.

British Tobacco Company (Australia), Limited.—At a meeting to be held in Sydney, Australia, of this company, it is proposed to increase the capital to £7,250,000 by the creation of 1,250,000 additional ordinary shares of £1 each, ranking *pari passu* with existing ordinary shares. It is further proposed that 839,511 of these shares shall be offered to existing ordinary shareholders at par, in the proportion of one share for every five shares held. The present quotation of existing £1 ordinary shares is round about 28s 9d. At this price the yield, based on the last complete year's dividends, works out at approximately 8¾ per cent. The company recently made an issue in the proportion of one share for every ten shares held. Shareholders who exercise their option may find a small margin of profit.

The Isle of Man Steam Packet Company, Limited.—Authorised capital £600,000, in shares of £1 each, all of which are issued and fully paid. This is an issue of £300,000 6 per cent. registered first mortgage debentures, redeemable at par on or before January 1, 1931. These debentures are secured by a trust deed, being a first specific charge on freehold land, offices, and warehouses in the Isle of Man, and on "steamers which will be specifically mortgaged to the debenture trustees." A curious point in the prospectus is that a Statute passed in 1691 prevents payment of a higher interest than 6 per cent. in the island, but the company intends forthwith to promote a private Bill which will enable them to pay 6 per cent., free of income-tax up to 6s in the £1. The prospectus does not disclose much

information about the past history of the company beyond the facts that the Isle of Man Steam Packet Company, Limited, was established in 1830, and that in 1919 £400,000, "part of the undistributed profits of the company," was capitalised and distributed by way of bonus shares. According to the balance-sheet of the company for December 31, 1919, steamers, buildings, land, &c., were valued at £950,509, after depreciation had been deducted. The security, therefore, is good, but it would have been better if the company had waited for the Bill to pass before making the issue. Life is short, and time is fleeting, but Parliaments are not inclined to hurry over private Bills. Meanwhile, we suppose the investor will only get 6 per cent., less tax.

The Waller Housing Corporation, Limited.—Authorised capital £320,000, divided into 70,000 10 per cent. cumulative participating preference shares of £1 each, and 200,000 ordinary shares of £1 each. Of the ordinary capital £200,000 has been issued. This is an issue of the whole of the preference shares at par, and of £60,000 10 per cent. four-year credit notes at par, redeemable on December 31, 1924, at 110 per cent., or at any time at the same premium on the company giving three months' notice. The company was formed in December, 1919, to develop the "Waller System of Building Construction," which presumably is a patented method. The company has obtained substantial contracts. The statement of assets is somewhat vague, as is also the estimate of profits. On the information offered we do not advise an investment, either in the notes or shares.

Akim Alluvials, Limited.—Authorised capital £150,000 divided into 600,000 shares of 5s each. This is an offer of 300,000 shares at par. The company has been formed "with a view to turning to account rights and interests in parts of the gold properties belonging to the Goldfields of Eastern Akim, Limited, and the diamond properties belonging to Akim Diamond Fields, Limited." It would be interesting to know why it is necessary to promote a further company to develop these properties. We dealt with the prospects of the Akim Diamond Fields, Limited, in April of this year (see the *Economist* for April 24, 1920, page 871). We notice that that democratic monarch—the King of Eastern Akim—who, in association with "his chiefs and people," is largely interested as a shareholder in the Akim Diamond Fields, Limited, and who was a director of this company, is not a director of the new undertaking. As the festive season draws near, many of us are inclined to unloose our purse-strings, but we should imagine that the average investor will easily find other avenues for his surplus cash than to send it in this direction.

C. H. Nuttall and Co. (1920), Limited.—Authorised capital £250,000, in ordinary shares of £1 each. This is an offer of the whole capital at par. There are no debentures. The company has been formed to acquire the business of C. H. Nuttall and Co., Limited, cotton spinners, of Stalybridge. Surplus assets are valued at £250,000, nothing being included for goodwill; land, buildings, fixed and loose plant, machinery, engines, boilers, horses, carts, &c., are all lumped together as one item and valued at £246,669. It is true later on that independent valuation for two different mills are shown, but we venture to suggest that a little more information should be given as to the values of separate items. It must be assumed that values are taken at to-day's inflated prices. The purchase price has been fixed at £250,000, and is payable in cash. No promotion money has been paid, and the issue is not underwritten. The past financial history of the undertaking is not given. We have extracted this information from the advertised prospectus. On the meagre information offered we cannot advise an investment in the shares.

The Sutton District Water Company.—This company is advertising the sale of £25,000 7 per cent. debenture stock at par. This stock will fall due for redemption on January 1, 1931. The *Stock Exchange Year-Book* states that, "For 45 years to December, 1918, the dividend" on the ordinary stock "was at the rate of 10 per cent. per annum." For 1919 7½ per cent. was paid. These debentures are a trustee security, and capital and interest are well covered. But regard should be paid to the confined market for so small an issue.

Bridlington Amusements, Limited.—Authorised capital £80,000, divided into 58,000 10 per cent. preference shares of £1 each, and 88,000 ordinary shares of 5s each. This is an issue of 48,000 of the above 10 per cent. preference shares and 24,000 ordinary shares at par. Applicants for preference shares are entitled to purchase one ordinary share at par for every two preference shares subscribed for. The company has been formed to acquire "the premises and ground known as the amusement centre" at Bridlington, Yorkshire. An independent valuation shows that the property is worth £65,000. The purchase price has been fixed at £65,000, of which £25,000 is payable in shares and the balance in cash. Preliminary expenses are estimated at £5,500, exclusive of underwriting commission and brokerage. Optimistic estimates of profits are given, and the company may or may not prove successful. Local investors may be able to judge better on that point than the general investor, who is not recommended to subscribe to this speculative venture.

Naparina Oilfields of Trinidad.—The capital of this company has been increased from £200,000 to £500,000 by the creation of 300,000 ordinary shares of £1 each. This is an offer to shareholders only of 50,000 shares, in the proportion of one share at 30s per share for every four shares held. The issue is underwritten by the Culloden Consolidated Company, Limited, for a commission of 10 per cent. on the issue price. According to the Stock Exchange Supplementary List for December 16th dealings have taken place in the old £1 shares, fully paid, at 31s 3d. The company was registered on May 5, 1920, with an authorised capital of £200,000, and the purchase price was £100,000, in fully-paid shares. We do not consider the shares attractive.

The Issuing and Underwriting Corporation, Limited.—Authorised capital of £20,000, divided into 12,500 12½ per cent. participating preference shares and 7,500 ordinary shares of £1 each. The vendors take the ordinary shares in full settlement, and the preference shares are offered for subscription at par. After the preference shareholders have received 12½ per cent., the ordinary shareholders receive the remainder up to 12½ per cent., any surplus profits to be divided as follows: 40 per cent. to be placed to a reserve fund, 40 per cent. to preference shareholders, and 20 per cent. to ordinary shareholders. The prospectus, which was published in July last, stated that the corporation had been formed to carry on the business incidental to financial corporations throughout the British Empire and abroad, but as to the more detailed intentions of the corporation the information offered was vague. Apparently the flotation was not very successful, for an unstated number of ordinary and preference shares are now being offered by the British Development Syndicate, who are promoters of the Issuing and Underwriting Corporation, Limited. The original prospectus stated that "the vendors prove their confidence by taking the ordinary shares in full settlement." What are we to think, however, when the ordinary shares are being offered for sale by the promoting syndicate? Our comment at the time of this issue was that: "If seeking an investment in an undertaking of this description investors should favour those companies which have (1) capital of sufficient amount to handle any financial proposition which may come along, and (2) a board of directors composed of well-known city financial experts." If these acid tests are applied investors will look elsewhere for an investment.

COMPANY MEETINGS, &c.

THE BRITISH OVERSEAS BANK, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR'S WORKING.

DEVELOPMENT OF BUSINESS BETWEEN GREAT BRITAIN AND POLAND.

LARGE PROPORTION OF LIQUID ASSETS.

The first annual general meeting of the shareholders in the British Overseas Bank, Limited, was held, on the 17th inst., at the Cannon street Hotel, London, E.C., the Governor (the Right Hon. Viscount Churchill, G.C.V.O.) presiding.

The acting secretary (Mr. A. E. Thorne) read the notice convening the meeting and the report of the auditors.

The report and accounts as submitted were taken as read.

The Governor said: Ladies and gentlemen,—Our report and figures for the year are now in your hands, and I feel sure you will consider that, in the first year at least, the bank has justified its existence. I will deal with these figures later. In the first place I would like, if you would allow me, to remind you of our general policy and to describe briefly how that has developed in practice during the past year.

With such an audience I need not dwell upon the unusual difficulties with which all bankers have been faced since the Armistice, difficulties which have applied with exceptional force in our own case. We have had to elaborate an internal organisation many sided and elastic enough to meet any development of these uncertain days, and at the same time to build up from nothing connections all over the globe with countries in which conditions are so different from before the war that previous knowledge of them is of little or no value.

From this, as you will readily understand, we felt it a matter of absolute necessity that we should acquaint ourselves as rapidly and as effectively as possible with the changed world in which we were starting our career. We have accordingly devoted special attention to the formation of an intelligence department, with the object of ascertaining conditions affecting the countries with which we have to deal, and of following and taking advantage of the general trend of economic development. The department has already justified its existence in the help it has given on questions of the bank's general policy and on the many points of difficulty which arise in our daily working. As far as the service of our clients and the public is concerned, its work has been largely of a preparatory nature, but memoranda have been circulated on economic conditions in most European countries. Progress has also been made in the building up of credit information, and our files, which are rapidly increasing in number, already contain details as to the standing of some 25,000 firms.

As the next step in obtaining definite and reliable information on these new conditions, it was realised that it was essential to establish one or more posts in Central Europe. As soon, however, as we began to consider the execution of this project, we found that the abstract complexities of the position were considerably added to by practical difficulties. The larger banks in almost all these countries were in a position of extreme difficulty owing to their pre-war obligations abroad, the repayment of which, as far, at least, as London was concerned, had become almost impossible as the result of the great fall in the value of their currencies in relation to the £ sterling. In many cases, too, such banks found it equally impossible, through political obstacles, to realise their claims or assets in neighbouring States, while, owing to territorial changes, many of their branches were, after the war, situated in countries strongly antagonistic to them, or at best unfriendly. The result was that in almost every case no satisfactory estimate of the financial position of these institutions could be reached, and connections which might otherwise have been desirable were made impossible.

POLAND.

It was decided to establish the first of these posts in Warsaw. From time immemorial the capital of Poland has been a great distributing centre, and although the coming of railways, constructed as they were from strategic rather than commercial motives, has to some extent interfered with her position, she still remains a city of great possibilities. There was, too, a further general factor influencing our decision. Poland has for many years been divided into spheres controlled by Russia, Germany, and Austria. As a result, one finds to-day a considerable diversity of outlook and feeling in different sections of Poland. While this makes the problems before the Polish Government extremely complicated and difficult, the previous trade relations of the Poles with these neighbouring States give them a knowledge of these countries which is quite exceptional. After mature consideration, we felt that the point of view and the information to be obtained from going to Warsaw was sufficient justification for facing the considerable hazards which such a step involves.

In the firm of Messrs A. Peretz and Co. a banking house was found which had escaped the difficulties in which most other banks had become involved. Its senior partner, Mr Adolphe Peretz, was perhaps the best known theoretical banker and authority on foreign exchange in Poland (being chairman of the official Exchange Committee). Mr Peretz agreed to become a member of the board of management for one year, and, although he now no longer takes an active participation in the business, he will continue to act as consultant, and his advice will always be available when required by the British manager.

CENTRAL AND EASTERN EUROPE.

Up to the present, although we have received many proposals from most varied quarters, we have refrained from establishing ourselves or acquiring interests in other disturbed areas in Central and Eastern Europe. At the same time, we have followed up each of these propositions with great care, and have, we hope, acquired experience that will stand us in good stead when the time for definite action arrives. The reasons for delay have varied with each country concerned. In Austria, for instance, the present situation is very unstable. Proposals have been made by the Reparation Commission for assistance to Austria over the next five years, which, if adopted, may enable the country to be self-supporting again by the end of that time. Should, however, the Allies refuse further assistance, it may be impossible to prevent the disintegration of Austria through the breaking away of its various provinces and their adhesion to one or other of the neighbouring States, a process which may easily result in new wars in this region. This uncertainty as to Austria's future has a very close bearing upon Czecho-Slovakia; while, in addition, it still remains to be shown whether or not the Czech Government will be able to reconcile to its control the other races assigned to them by the Treaty of Peace. In Jugo-Slavia the outlook is perhaps more promising, as it is in the main an agricultural country, with powers of speedy recuperation; but until very recently the solution of its disputes with Italy and with Austria were by no means clear. I may say, however, that here, as in other parts of Central Europe, we have made temporary connections which have so far been fully satisfactory for our own needs and those of our clients.

In the case of Russia, we have received many propositions for trade with one or other of the various conflicting elements. Here, too, we have gained useful experience, but we have not felt justified as yet in entering upon actual business. At the same time, we have taken various steps to prepare ourselves to play our part in any ultimate development of the vast possibilities which Russia contains.

With Germany our relations have so far been satisfactory, and our sources of information with regard to conditions in that country have proved particularly valuable. We have followed developments there with close attention, and we have become increasingly convinced of the necessity of restoring normal economic conditions for the sake both of ourselves and still more so of our French neighbours, who are, paradoxically enough, suffering even more severely from the uncertainty of Germany's prospects.

The importance both of Russia and Germany is forced upon us in relation to the present rapid spread of stagnation and the threat of economic collapse in every part of the world. While large areas cannot obtain the goods of which they are in urgent need, other parts are suffering from over-production. Until the political problems underlying our relations with Russia and Germany have been solved, the necessary basis of credit on which production and interchange depend cannot be restored. Until Russia has been brought back into the comity of nations, and until the position of Germany has been settled, the world will go backward rather than forward. And it is for us, as a bank, whose prosperity depends upon friendly intercourse beween nations, to march warily and bide our time.

BELGIUM.

I have refrained until now from reference to Belgium, the second country with which we have established intimate connections, as this country forms a welcome relief to the gloomy note upon which reference to most parts of Europe is bound to be

pitched. Of all European countries engaged in the war, the recovery of Belgium has been the most rapid. The main factor in this recovery, and the one that gives most hope for the future, has been the indomitable energy and capacity for work displayed by the Belgian people as a whole. No one who has visited Belgium recently can fail to have been struck by the vigour with which the whole country is working, and by the absence of that reaction from war strain which in almost every country, neutral as well as belligerent, has manifested itself in a slackening of effort among all classes and in an alarming increase in general unrest. There have been labour disputes in Belgium since the war, and they are not yet finished. But comparatively little time has been lost, and both sides have shown a remarkable tendency towards a reasonable settlement.

In view of this, I think we may congratulate ourselves on having turned towards Belgium, and that we may look to far-reaching consequences both for ourselves and for our new friends in that country. During last summer we entered into arrangements with the Banque de Bruxelles, the head of one of the most powerful banking groups in Belgium, under which this bank and its affiliated institutions represent us in Belgium, while we perform the same service for them in this country. Up to the present the scheme has developed even more rapidly and more satisfactorily than we anticipated, and we are thoroughly content with the connection thus established. This feeling, we have every reason to suppose, is reciprocated by our friends in Brussels.

In this brief survey, I have not dealt with those parts of the world where conditions have remained more normal. With the United States, and with our own colonies and dominions, with the East, with South America, with Holland and Scandinavia, and in other parts, we have formed connections which, generally speaking, have given us satisfaction at the present stage of our development, and the business which we have been able to do there has already expanded more readily than we could have hoped.

Before I deal with the figures in the balance-sheet, a few words of explanation may possibly not be out of place.

THE YEAR'S WORKING.

The policy laid down on the establishment of the bank has been strictly followed. The only departure from our original scheme, if departure it can be called, has been in the rapidity with which our business has developed. This has placed a very heavy strain upon our executive officers and the general staff, and it has only been with considerable difficulty that the standard of efficiency we regard as necessary has been maintained. Our difficulty has been increased by limited office accommodation, but we hope to have improvement in this respect shortly.

The rapidity and completeness with which we have been able to establish an efficient service, and, as its essential foundation, a network of reliable connections over the whole world, reflects the greatest credit upon our management, who have not only had to bear the burden of organising these connections, but have also performed a great duty in advising our clients how these connections could best be utilised. I feel that the thanks of the shareholders are due to the managers and to every member of the staff, that we should so quickly have been able to meet and overcome the many difficulties that are inseparable from the creation of a new bank, especially one dealing with a phase of banking hitherto largely monopolised by foreigners.

FOREIGN EXCHANGE.

As stated originally, our efforts were first directed to the establishment of a comprehensive and thoroughly efficient service of foreign exchange, and in both respects progress exceeds our expectations. This has enabled us to form intimate connections with the leading banks and bankers in all parts of the world, which are already of the greatest value in making it possible for us to offer good services to our constituent banks and clients in many other directions than in foreign exchange alone. Under such conditions as have obtained during the past year it has obviously been essential to carry out our dealings in the most conservative manner, and I feel you will not be surprised to know that safety rather than large profits has been our primary object. Our wide ramifications, especially on the Continent, have enabled us to secure immediate covering for both spot and forward transactions, and to deal freely even when the London market was particularly difficult. The volume of business was large, and our turnover has reached the utmost limits of our present facilities for handling it. Dealings on this scale, with the large settlements involved, naturally necessitated the maintenance of large cash reserves.

CREDIT.

We did not feel it wise, until we had established our position and gained experience of the actual working of our organisation, to go in largely for acceptance or credit business, but, as will be seen, the substantial figure of £1,621,000 was outstanding at the date of our balance-sheet. This figure also shows a more rapid growth than we had thought probable at the beginning of the year.

CURRENT AND DEPOSIT ACCOUNTS.

Current and deposit accounts stand at £1,402,000. It will be remembered that, while we had power to take deposits, open accounts, grant loans, &c., and, indeed, do all the business appertaining to a fully constituted home bank, we did not propose to compete for this class of business with our constituent banks. We have maintained this policy, and the figure of £1,402,000 represents for the greater part the balances of foreign clients, or of clients who are accumulating funds in anticipation of the maturity of credits. For this reason it is naturally subject to somewhat violent fluctuations, which again demonstrates the necessity for a strong liquid position. The small proportion of permanent deposits, of course, precludes us from advancing freely on loans, and most of our direct advances are consequently connected with overseas trade in one form or another.

CASH POSITION.

For the reasons I have already given our resources in the form both of cash and short market loans are very strong. They are, however, as I have said, subject to heavy calls, and we felt that the general conditions of the past 12 months demanded extreme prudence.

INVESTMENTS.

As you will see from the balance-sheet, our investments in Government securities consist of National War Bonds, maturing 1922, while other investments consist of our capital participation in the Anglo-Polish Bank, to which I have already referred.

ISSUES.

While power was taken in our articles to act as an issuing house, we did not propose to exploit this field until we had established our general organisation and completed our connections abroad. Our experience, however, in this sphere has been similar to our general experience, and a certain amount of business has been proposed to us which we thought it expedient to undertake. Our most important operation in this connection has been the issue of £3,000,000 secured notes for the Explosives Trades, Limited, which we undertook in collaboration with Messrs Helbert, Wagg and Co., Limited, and, as you are no doubt aware, the issue, although made at a trying time, was signally successful.

SUPERANNUATION AND PROVIDENT FUND.

In the course of the year a superannuation and provident fund, on a contributory basis, was established on lines of which some of the associated banks have already had experience. We fully anticipate that the beneficial results in their case both to the bank and to the staff will also be our lot.

NEW PREMISES.

The shortage of office accommodation to which I have already referred has been a matter of considerable difficulty. While we had reason to congratulate ourselves on securing the reversion of the lease of the Anglo-Austrian Bank in Lombard street, the accommodation furnished was so obviously inadequate for our prospective needs that we felt it to be one of our first duties to secure a site. This, I am glad to inform you, we succeeded in doing, and early this year bought the freehold and other interests of Nos. 33 and 35 Gracechurch street, where we propose to commence the erection of bank premises at the beginning of 1921. We subsequently bought the freehold rights of 36 Gracechurch street, but the other interests in the premises prevent this site being immediately available for rebuilding. At the same time, it is satisfactory to feel that at some future date we shall come into full possession.

ALLOCATION OF PROFITS.

I shall now turn to our profits, amounting to £19),744 6s 2d, which I trust you will regard with as great satisfaction as your council. They have been derived chiefly from the volume of our foreign exchange business, although I am glad to say that all our departments have contributed to the total, and that lack of office space is our chief difficulty in preventing their even more rapid development.

The first item that the council consider should be dealt with out of this total is that of our preliminary expenses, a sum amounting to £39,015 19s 3d. It is recommended that this amount should be written off. I have already mentioned our participation in the Anglo-Polish Bank. This amounts to £32,442 11s 5d, and, as investments of this character will have to be made from time to time, it is felt that a reserve fund ought to be created. The council accordingly recommend an allocation from profits for the purpose of £10,000 on the present occasion. This leaves us with £150,728 6s 11d, and the council recommend the payment of a dividend on the "A" shares from the date of subscription until

October 31, 1920, at 6 per cent., less income-tax. As you will see from the report, this will leave us with a balance to carry forward to next year of £81,488 6s 11d, out of which income-tax and corporation tax will require to be met.

I trust that the "A" shareholders present will not consider the payment of a dividend to them a departure from the conservative policy laid down. It is only after the most careful consideration that the council feels justified in recommending this payment.

I now move the following resolution:—"That the report and accounts as audited and certified by the company's auditors, now before the meeting, showing the position of the company's affairs as at October 31, 1920, be approved and adopted, and that the dividend recommended to be paid by the governing council in their annual report of 6 per cent. per annum on the "A" ordinary shares for the period to October 31, 1920, from the date of subscription, be approved. The dividend to be paid to such shareholders as appear on the register of members at the closing of the books on November 22, 1920."

I will call on Sir Arthur Haworth to second that motion.

VIEWS OF SIR ARTHUR HAWORTH.

Sir Arthur Haworth: My lord and gentlemen,—I beg to second the resolution which has just been moved by our noble chairman in, if I may say so, a most interesting and comprehensive speech. The one point that I would wish to endorse is this: I think the shareholders are to be congratulated upon, and the directorate most heartily thanked for, the very excellent result placed before our first annual meeting. (Applause.)

In the absence of question or comment, the motion was put to the meeting and carried unanimously.

THE GOVERNOR'S APPOINTMENT CONFIRMED.

Mr R. H. Benson: My lord and gentlemen,—I rise to propose a resolution, which I conceive is not the least important part of the business that we have to do to-day. In the organisation of this bank the function of the Governor is far from being the least important. The Governor of an organisation such as this is not merely a distinguished figurehead, though I should be sorry to underrate the value to the bank of the present appointment on account of hereditary distinction, and the services which bearers of the name of Churchill have already rendered to King and country, and in the present instance have already rendered in smaller spheres than that of world finance and world economics such as are now being applied practically to world reconstruction. I conceive, gentlemen, that when the Council, assisted by their admirable intelligence department, which is somewhat of a new feature in the banks of the city of London, have done their initial work—not, perhaps, so much for business that is merely profitable as for business which is of world-wide importance to get trade moving again—then, I take it, the managers come in efficiently to carry out what their superiors have initiated. Even then, somehow or other, we are liable to find that a sticking point arises Politics, we know, is first cousin to gossip, and in these days, when the self-government of men is being enlarged by the self-government of women, who can tell where and how difficulties may arise. This is the point where, I imagine, the Governor comes in, and can meet officials and the heads of departments, and Cabinet Ministers, and even the Prime Minister himself—I was going to say, perhaps, even King Tino himself, but I will draw the line there—(laughter)—and by the intervention of the Governor all goes smoothly. I wish to congratulate my fellow shareholders that we have persuaded Lord Churchill to accept this post, and I would move, "That the election of the Right Hon. Viscount Churchill, G.C.V.O., who was appointed as Governor of the Council since the last general meeting, be confirmed, and that he be elected a member of the Council, and that his remuneration as Governor be at a rate double that paid to a director of the company."

Mr S. Ray Marshall seconded the motion, and it was carried unanimously amidst applause.

THE GOVERNOR'S ACKNOWLEDGMENTS.

The Chairman: Gentlemen,—I am extremely obliged to you, and thank you most sincerely for the honour you have done me in electing me Governor of the British Overseas Bank. I thank the proposer of the motion for the very kind words referring to myself in which he has introduced me to you. I can assure you that it was a very great surprise to me when I was asked to take this honourable position upon myself. I do not mean to say that I know much about anything, but I felt that the one thing about which I knew less than most things was practical banking and foreign exchange. It was, however, explained to me that that was one of the chief points in my favour as a candidate for the position—(laughter)—I could only conclude that the eminent gentlemen on our Council, who are all men of great knowledge in that sphere, wanted to have an independent person—an ordinary man of common sense—to keep order in their violent discussions. (Laughter.) Well, gentlemen, it has been my privilege to attend most, I think, of the board meetings as well as the Council meetings since I have been here, and I can only say that I felt as much at home in the friendly and able discussions which have taken place as I am amongst my old friends—my shareholders and the board at the Great Western Railway meetings at Paddington. There we are a very happy family, and the shareholders are—and I say it in the broadest term—friends of mine, and I only hope that I shall be able to prove the same to you, if you give me your kind support in the manner they have done.

I thank you for the honour you have done me.

Mr Miles Ashworth: I have much pleasure in proposing "That Sir Arthur A. Haworth, Bart., and Mr Edgar Horne, M.P., who retire by rotation, be elected as members of the governing council."

Mr A. Galloway seconded the motion, which was carried unanimously.

Mr Laurence Currie: Lord Churchill and gentlemen, I have much pleasure in moving, "That elected members of council be paid as remuneration for their services at the rate of two hundred and fifty pounds per annum." These are our elected representatives; of course, the others are nominees of the banks. Up to now they have been working without any remuneration at all, and I feel sure that it will be the wish of the meeting that they should be paid a small honorarium for their attendance.

Mr R. T. Hindley seconded the motion, which was carried unanimously.

Mr D. C. Lee: I beg to move: "That the thanks of the meeting be accorded to the retiring auditors—Messrs A. W. Tait, C.B.E., A. S. Macharg, and A. Pilling, chartered accountants—and that they be re-elected as auditors of the company for the current year at a collective fee of five hundred guineas."

Mr J. A. Salter seconded the motion, which was carried unanimously.

The Chairman: Gentlemen, that terminates our business. I am very much obliged to you for coming here this morning.

Dr. A. A. Brockett: Gentlemen, I have been asked to perform a very pleasant duty, namely, that of proposing a hearty vote of thanks to Lord Churchill for his kindness, and for the manner in which he has occupied the chair at our first annual meeting. We shareholders are extremely fortunate in that, and can congratulate ourselves upon the balance-sheet which has been placed before us, and on the speech from our chairman, to which we have just listened. I think we are fortunate in having as chairman one who possesses the experience and powers which he has. I beg to move formally that a cordial vote of thanks be accorded to our chairman for presiding.

The vote was carried by acclamation.

The Chairman: In thanking you for the vote, gentlemen, I should like to say one word. Although I am chairman of the meeting, your thanks are really entirely due to my friend on the left, Mr Gairdner, who is the chairman of the bank, and to whose knowledge and wisdom, backed up by the rest of the staff, I think the successful position in which we find ourselves to-day is entirely due.

Mr A. C. D. Gairdner: My lord, I wish to thank you for your very kind remarks, and also to thank you, gentlemen, for the way in which they were received. It is all too flattering. The fact of the matter is "Union is strength," and union is what we find in the working of the British Overseas Bank.

The proceedings then terminated.

CITY OF LONDON RE-INSURANCE COMPANY, LIMITED.

REVIEW OF THE COMPANY'S POSITION.

The annual general meeting of shareholders in the City of London Re-Insurance Company, Limited, was held, on the 15th instant, at Winchester House, Old Broad street, London, the Right Hon. Lord Morris, P.C., &c. (the chairman of the company), presiding.

The Chairman said: Dealing first with the business which we inherited from our predecessors, this has been dealt with in our report, and I do not desire to say anything more on this point, save, perhaps, to add that the result arose from abnormal conditions over which your board had no control.

Dealing first with the business which we inherited from our predecessors, this has been dealt with in our report, and I do not desire to say anything more on this point, save, perhaps, to add that the result arose from abnormal conditions over which your board had no control.

As to the revenue figures, as stated in the report, it was only in March last that our negotiations with the Tariff Committee were completed, and consequently our accounts show only about six months' working under the new arrangement.

The net premium from the business written since the reorganisation of the company amounts to £31,133 17s, the claims thereon

amount to £9,208 1s, and we have reserved 40 per cent. of the net premium for unexpired liability.

This, considering the circumstances of the times and the extreme care with which our business has been selected, is, I think you will agree, very satisfactory, especially in view of the fact that we had to find additional premises with better accommodation and in a more suitable locality than our old offices in Queen Victoria street. In view of the present difficulties incident to procuring offices in the City of London, we consider ourselves fortunate in having secured the suite of offices in Warnford court, Throgmorton street, where our underwriting department is carried on.

With a completely reorganised staff, under capable managers and with offices well situated and equipped, the business of the company is proceeding satisfactorily.

In the interests of the shareholders we have considered it essential to adopt a cautious and conservative policy, making sure, as far as is humanly possible, that the business we undertake is sound, and not merely seeking to build up a large premium income. It may surprise you to learn that the business we have declined far exceeds that which we have accepted. It would have been easy for us to have shown a premium income many times greater, but we prefer to err on the side of caution in the selection of risks.

We have established some first-class agencies and entered into several very favourable contracts with leading fire companies.

We are convinced that the policy we have adopted is the correct one, and we are satisfied that we have laid the foundation of a sound and remunerative business, which should eventually make the company a prosperous and dividend-paying concern.

MARINE INSURANCE.

You are perhaps aware that during the past few months some of the largest companies have made arrangements with other offices to underwrite marine business on their behalf; your directors have had similar proposals before them, to which they have given very careful consideration, but in their opinion it will prove more satisfactory to undertake such business through an underwriter of their own.

It is not an easy matter to-day to obtain the right man for such an important position, but we have great pleasure in informing you that we have been successful in securing the services of Mr Leonard H. Brading as marine underwriter, who will enter upon his duties as from January 1st next.

Mr Brading, as most of you know, has for the past six years been marine underwriter to that most successful office the Motor Union Insurance Company, and in addition to this, for a slightly shorter period to the United British Insurance Company and the British Commonwealth. Prior to his appointment to the Motor Union he was deputy underwriter for ten years to Sir Edward Mountain, of the British Dominions.

The results of the marine underwriting year by year of all these companies have been most successful. The marine departments of these offices have been, without exception, exceedingly well managed, and there appears to be no question but that their marine results have been an important factor in the success of these companies.

We consider we have now made such arrangements, in this and other directions, as will enable us to be in a position to command a fair proportion of the highest class of business, especially as they had the greater part of their working capital intact, and had, in addition, a large reserve of uncalled capital.

Whilst we do not hold out the immediate prospect of a very large premium income, we do believe it will be possible, step by step, so to build up the company that it may command the confidence of the insuring public all over the world.

The report and accounts were adopted. The retiring directors having been re-elected, the proceedings closed with a vote of thanks to the chairman, directors, and staff.

The

DORMAN, LONG, AND COMPANY, LIMITED.

SPLENDID RESULTS FOR 1919 AND 1920.

INCREASED PROFITS.

THE CHAIRMAN OPTIMISTIC AS TO COMPANY'S FUTURE.

The thirtieth ordinary general meeting of Messrs Dorman, Long and Co., Limited, adjourned from December 16, 1919, and the thirty-first ordinary general meeting were held, on the 14th instant, at the company's office, Zetland road, Middlesbrough, Sir Arthur J. Dorman, K.B.E., in the chair.

The Chairman said: This year we have been able to present to you the accounts for the two years ending September 30, 1919, and September 30, 1920. You will remember that last year it was necessary to adjourn our meeting owing to the impossibility of completing the accounts for that year; consequently, I propose to-day, first to take the 1919 adjourned meeting, and to ask you to pass the accounts for that year. We will then proceed with the 1920 meeting. I propose this course, as I think it more convenient to deal with the two years together, but the fact that you have passed the 1919 accounts will not preclude discussion upon them.

I call upon the secretary to read the notice convening the 1919 adjourned meeting, and will then ask Mr Nancarrow, of Messrs W. B. Peat and Co., to read the auditors' report on the accounts for that year.

I beg to propose "That the directors' report, balance-sheet, and accounts of the company for the year ending September 30, 1919, submitted to this meeting, be, and the same are, hereby approved and adopted."

Sir Hugh Bell, Bart., seconded, and the resolution was carried unanimously.

The Chairman, continuing, said: "That completes the 1919 meeting. We will now hold the ordinary general meeting for the year 1920." The secretary read the notice calling the meeting, and Mr Nancarrow read the auditors' report on the accounts for the year 1920.

A COMPARISON.

The Chairman: I will now deal with the accounts for the two years, and will compare them with those for the year ending September, 1918, during which year, you will remember, our profit was £416,266 7s 9d, which, together with £234,235 1s 9d brought forward, amounted to £650,501 9s 6d.

The profit for the year 1919 amounted to £511,860 15s 2d, which, with the sum of £206,468 12s 10d brought forward from the previous year, made a total of £716,329 8s, which has been dealt with as follows:—

£38,537 was applied to the payment of interest on debentures; £204,000 for a dividend of 8 per cent. and a bonus of 4 per cent., free of tax, on the ordinary shares; £97,500 for the dividend on the 8 per cent. preferred ordinary shares; £22,103 13s 3d for interest on calls on shares paid in advance; £4,000 for directors' fees; £5,859 15s 2d expenses *re* the issue of the ordinary and preferred shares; £10,477 for the redemption of 5 per cent. debentures, £130,000 to the general reserve, leaving a balance of £205,851 19s 7d to be carried forward to the following year.

The profit for the year 1920 is £743,077 4s 4d, which, together with the balance brought forward from 1919 of £205,851 19s 7d, amounts to a total of £948,929 3s 11d, which your directors propose to deal with in the following manner:—

£37,371 5s interest on debentures; £295,000 dividend at the rate of 8 per cent. and a bonus of 2 per cent. free of tax on the ordinary shares; £120,000 for dividend on the 8 per cent. preferred ordinary shares; £10,939 1s 11d interest on calls on the new ordinary shares paid in advance; £4,000 directors' fees; £12,124 8s 7d stamp duties and other expenses *re* the issue of the 3,000,000 ordinary shares; £20,954 for redemption of 5 per cent. debentures; £200,000 to the general reserve; and a balance of £248,540 8s 5d to be carried forward to next year.

CONSERVATIVE POLICY.

It will be seen that the profit for the year 1920 is sufficient to maintain the dividend of 12 per cent. paid in 1919 and still to allow a large amount to be placed to reserve, but in view of the difficult times through which we are now passing your directors feel sure that the conservative policy proposed by them will be approved by the shareholders.

I will now ask you to follow me through the balance-sheets. During the year 1919 the share capital was increased by the issue of £1,500,000 ordinary shares, bringing the total authorised capital up to £4,500,000, of which, including £360,269 8s for calls paid in advance, £3,959,639 4s only is included in the balance-sheet, the remainder of the amount of £4,500,000 being represented by the balance of calls on that issue of ordinary shares which did not fall due until after September 30, 1919.

During the year 1920 the share capital of the company was further increased by the issue of £3,000,000 ordinary shares of £1 each. The amount paid on application and allotment shares was £599,783 16s, and £599,286 8s was paid in advance of calls, which sums, together with the calls in respect of the 1919 issue, which were not paid until the year 1920, makes the total amount paid up on share capital account, as stated in the 1920 balance-sheet £5,699,070 4s.

The company's holding in their 4 per cent. first mortgage perpetual debenture stock, which in 1918 consisted of stock to the nominal value of £19,290, was increased in 1919 to £23,090, and in 1920 to the value of £51,765.

The 5 per cent. sinking fund mortgage debentures were reduced during both the years under review by the amounts required to be paid off and cancelled under the terms of the trust deed, the total debentures cancelled up to September 30, 1920, being £74,100.

LOANS FROM GOVERNMENT.

The amount of the secured loan to the company by the Government which stood at £627,782 in 1918 was increased to £794,943 in 1919, and further increased in 1920 to £1,138,475. This loan was made to the company by way of advances from time to time as the work at the blast-furnaces, steel furnaces, and plate mill at Redcar proceeded. When I addressed you on March 30th last on the resolution authorising the issue of the 3,000,000 ordinary shares I referred to this loan and to the fact that one of the objects for which the additional capital was required was for the repayment of this loan. It is not anticipated that the amount of the loan will be further increased, and, as a matter of fact, we have since the date of the balance-sheet repaid £200,000 of the amount.

The debts due by the company amounted to £1,271,381 0s 11d in 1918, in 1919 to £1,351,474 7s 3d, and in 1920 to £2,603,157 18s 5d. The large increase in 1920 is mainly due to the increased provision for taxation.

The reserve accounts, which in 1918 amounted to £262,951, were increased in 1919 to £383,911, and in 1920 have been further increased to £524,388, and it is proposed to add £200,000 to general reserve, and £20,954 to reserve for redemption of 5 per cent. debentures out of the balance at credit of profit and loss account at September 30, 1920, bringing the total reserve accounts of the company to the substantial sum of £745,342.

I have already dealt with the disposal of the balance at credit of profit and loss account for each of the two years.

THE ASSETS.

We will now turn to the assets side of the balance-sheet. The capital expenditure on land, buildings, plant, and machinery at Britannia Works, Redcar Iron Works, sheet works, wire works, Kilton Mines, London Girder Yard, and Melbourne Yard, which stood at £992,942 6s 1d in 1918, was increased in 1919 to £1,000,198 7s 11d, and in 1920 to £1,027,955 18s 1d. As this account has, since 1905, been written down by the sum of £634,000, and now stands at a very low figure, your directors do not consider it expedient to write it down further at present. It will be observed, however, that they have decided to add £130,000 for 1919 and £200,000 for 1920 to the general reserve of the company.

The suspense account, as the balance-sheet shows, comprises the balance of special expenditure on plant under arrangements with the Ministry of Munitions at Redcar Steel and Iron Works and houses and other buildings at Dormanstown. This account stood in 1918 at £858,657 5s 9d, was increased in 1919 to £1,534,145 9s 3d, and further increased in 1920 to £2,099,065 1s 5d. As it has not yet been possible to arrive at a settlement with the Government Departments concerned, this amount has not been transferred to capital account.

INVESTMENTS.

As regards the investments of the company. In 1918 the shares in Sir B. Samuelson and Co., Limited, Messrs Bell Brothers, Limited, and the North-Eastern Steel Company, Limited, stood at £2,080,009 10s.

In 1919 that amount was increased by £200,000, owing to the purchase of the £200,000 unissued ordinary share capital of Messrs Bell Brothers, Limited. The amount was also further increased in 1920 to £3,285,407 12s 10d by the amount paid for the

whole of the preference shares and the ordinary shares, with the exception of 27 of the Carlton Iron Company, Limited.

In 1919 the company purchased National War Bonds, Funding Loan, and Victory Bonds at a cost of £488,530. The company's holdings in these securities were reduced in 1920, particularly by the realisation at the price of issue in payment to the Carlton Iron Company, Limited, for the shares in that company, and partly at par in payment of Excess Profits Duty. Since the date of the 1920 balance-sheet the remainder of the National War Bonds have been realised at par in payment of Excess Profits Duty, leaving the Victory Bonds, which stood at the date of the balance-sheet at below market price.

The shares in the Channel Steel Company, Limited, and other investments, stood at £345,421 os 9d in 1918, and were increased to £353,308 17s 5d in 1919 and to £380,074 os 5d in 1920, included in which figures are the company's holdings in the Bowesfield Steel Company, Limited, Messrs Wade and Dorman, Limited, South Africa, and Messrs Dorman, Long, and Co.'s 4 per cent. debentures.

The stocks on hand in 1918 were valued at £931,637 15s 7d. This amount was increased in 1919 to £1,315,852 6s 2d, and further increased in 1920 to £2,113,615 18s 1d. This increase is due to some extent to increase in value, but mainly to increase in the volume of our business through the expansion of our Redcar Works and to transport difficulties. I am glad to say, however, that during the miners' strike the railway company was able to supply us with more trucks, and we have been able to reduce very considerably our stocks of finished material.

The debts due to the company, which in 1918 stood at £807,869 3s 10d, were slightly reduced in 1919 owing to the temporary effect of the railway strike in September, 1919, to £783,648 18s 1d, but have increased to £1,699,894 18s in 1920, the increase arising mainly from ordinary trade debts. Had it not been for the effects of the railway strike, the difference between the figures for 1919 and 1920 would have been less apparent than they are.

The cash at bankers and in hand in 1918 amounted to £141,039 11s 9d, and in 1919 to £139,318 2s. This item in 1920 stands at £226,268 7s.

ALLIED COMPANIES.

On previous occasions I have drawn your attention to the fact that included in our profits are dividends on the shares held by us in our allied companies, who in those days consisted of Messrs Bell Brothers, Limited, and the North-Eastern Steel Company, Limited. Since then we have acquired the share capital of Sir B. Samuelson and Co., Limited, and the Carlton Iron Company, Limited. Therefore, in future, a larger proportion of our profits will consist of dividends derived from our allied companies. I think it is not out of place to mention here that before any dividends are declared by our allied companies full deductions are made for depreciation and reserves. In other words, in addition to Messrs Dorman, Long and Co.'s reserves, very substantial reserves are being accumulated by the allied companies.

The two most important matters of interest which have taken place during the last year have been the issue in March of 3,000,000 ordinary shares to the existing shareholders of the company, and the purchase of the shares of the Carlton Iron Company, Limited.

With regard to the issue, I have only to say that the whole of the share capital was taken up by either existing shareholders of the company or the staff and employees of the company. It is interesting to note that the shareholders in the company at the present time number 14,200, and of those 860 are members of the staff and employees of the company, holding amongst them, excluding shares held by directors, 293,000 shares. The issue was not underwritten, consequently the company have saved all underwriting expenses, and the whole cost of the issue amounted only to £12,124 8s 7d, of which £7,500 was paid for stamp duties.

A NOTE OF CONFIDENCE.

It is a matter of regret to your directors that our shares stand at such a low figure in the market, but we are satisfied that this is due to outside causes, which have affected every security, and not to anything within the company. In March last I told you I was confident that, given normal working conditions, we could earn profits sufficient to pay a fair dividend on the increased capital, and I had no hesitation in recommending our shareholders to take up all the shares to which they were entitled. Nothing has occurred to make me alter that opinion, and, with our new properties and plant coming into operation, I am confident that we shall pay a fair dividend on our increased capital.

With regard to the Carlton purchase, your directors are entirely satisfied with this property and their policy in purchasing it. The shares of the company were acquired as from January 1st last, and the nine months' working has resulted in the company being able to pay a dividend to Messrs Dorman, Long and Co., Limited, amounting to £65,813 5s, after, of course, making provisions for taxation and allowances for depreciation. The nine months' working, therefore, not only gives a satisfactory return on our capital invested in the shares of the Carlton Iron Company, Limited, but, what is of much more importance, has assured to Dorman, Long and Co., Limited, a regular supply of ferro-manganese and coal.

I would go so far as to say that had it not been for the coal which their colliery was able to provide us with, it would not have been possible for us to have kept our works running to the extent they have done throughout the year. By the developments which they are now carrying out at the Mainsforth Colliery we expect to get a largely increased output in the future.

Both Messrs Bell Bros., Limited, and Sir B. Samuelson and Co., Limited, are proceeding with the development of their mineral properties and the erection of coke ovens, to which I referred last March. The issue by Messrs Bell Brothers, Limited, to us of the remaining 200,000 of their ordinary shares was necessitated by these developments, which are proceeding satisfactorily. Both these companies show good returns on their operations. They have supplied us with all our requirements of pig-iron, and have kept their works fully employed throughout the year.

It had been considered desirable that the financial year of Sir B. Samuelson and Co., Limited, should be made to coincide with the financial year of Dorman, Long and Co., Limited. This alteration has resulted in Dorman, Long and Co., Limited, receiving from Sir B. Samuelson and Co., Limited, dividends for 18 months, instead of 12 months.

NORTH-EASTERN STEEL WORKS.

The North-Eastern Steel Works were shut down in April, 1919, for extensive alterations and repairs, which, I am happy to say, are rapidly nearing completion. The mills were restarted in November, 1919, and the battery of 60 Simon Carves coke ovens with by-product plant for 120 ovens in August last, and are giving most excellent results. We propose to blow in two of the blast furnaces next month, and at the same time to start the first of the new open-hearth tilting steel furnaces, which, you will remember, I told you we were building to take the place of the basic Bessemer plant.

The remainder of the steel furnaces will follow on as soon as they are ready, meanwhile we shall keep the mills supplied with ingots from our other works. The North-Eastern Steel Works have been practically rebuilt, and I am confident will give a good return on the capital expended.

The demand for corrugated sheets is at the present time very slack. With that exception the whole of our mills at Britannia, Clarence, North-Eastern Steel Works, and Redcar are in full operation, and have orders which will last them for some months; the same applies to the wire works and contructional yards, both in Middlesbrough and London. The depression in the corrugated sheet trade gives us a good opportunity—of which we are taking advantage—of pushing on with the remodelling of the Ayrton Rolling Mills, to which I referred last March.

GOOD RESULTS AT REDCAR.

Our new plate mill at Redcar is working most satisfactorily—we have already got up to an output of 3,000 tons per week of finished plates. Mr Ennis is confident that the maximum output has not yet been reached; he believes that next year it will be nearer 4,000 than 3,000 tons, and Mr Ennis is a man who is not given to prophecy unless he has good grounds to go upon. There has been considerable delay in the completion of our second mill, but we have had it running round and expect to be rolling plates in the early part of next year. We have every reason to believe that this mill will be as successful as the one now in operation.

With regard to Kent, we exercised our option to take up the lease of a large coal area in the neighbourhood of Betteshanger, as the option period would otherwise have expired during the year, and we are taking the necessary steps to prepare for the development of this area. Apart from this, we have not felt justified in proceeding with the active development of our other holdings in the Kent area in view of the excessive cost of labour and materials at the present time, coupled with the uncertainties engendered by the existing form of Government control of the mining industry.

I am pleased to say that our production departments have been almost entirely free from disputes and differences during the past year—a state of affairs which is particularly gratifying when there is so much trouble and unrest in other directions. This applies generally to the iron and steel trade, and, I think, is largely due to the very wise policy which has been faithfully followed by the Blastfurnacemen's Association, the Iron and Steel Trades Confederation, and the Employers' Association, of adjusting their differences by local negotiation, or, if this fails, by arbitration. By this means a fair hearing is assured and all differences can be impartially and equitably dealt with without the crippling effect caused by recourse to strikes or lock-outs.

PAYMENT BY RESULTS.

We have also benefited—both employers and employed—by the

tonnage or output system of payment by results, which, together with the sliding scale based on the selling price of the finished material, has been in operation in the producing departments for many years.

I am glad to say that during the year we have been able to extend this principle to a large proportion of the craftsmen engaged in our engineering departments on the maintenance and upkeep of our plant, so that the number of our men who have now a direct interest in output is considerably increased. I believe that the additional benefit to the men will result in greater output and efficiency.

The system of payment by results is equitable both to the employer and employed. On the one hand, it enables the worker to get higher earnings for his labour, while, on the other hand, it reduces the cost of production by ensuring that costly plants are worked to their full capacity. I feel sure that if it were extended to other trades it would go a long way towards solving the many difficult problems with which the country is now confronted.

THE OUTLOOK.

During the past year there has been a considerable change in industrial conditions, and there is no doubt that we are entering upon a period of depression which promises to be severe so long as it lasts, and to cause a certain amount of hardship and unemployment. It is difficult to say how long it will last. My opinion is that it will not be of long duration, for the fall in wholesale prices which has set in will soon reach the retailer. That in its turn will lower the cost of living, and cheapen the cost of manufacture. When that comes about the world, which has refused to buy beyond its absolute necessities at the high level of prices ruling since the armistice, will come in again. It must be remembered that development has been at a standstill since the beginning of the war, and that the world's wants are still large and unsatisfied.

As for ourselves, we are to-day well equipped with thoroughly modern plant, with greatly increased output capacity, and with the help of our able and efficient staff, I am confident that we can face the situation before us and meet any competition. But if we are to keep our order books full and ensure steady employment for our men, we need the whole-hearted co-operation of every man in our works. From the spirit I see around me to-day I feel sure we can count upon this.

I now beg to propose : "That the directors' report, balance-sheet, and accounts of the company submitted to this meeting be, and the same hereby, approved and adopted."

Seconded by Sir Hugh Bell, Bart.

The Chairman invited any questions, after which the resolution was put to the meeting and carried unanimously.

A dividend at the rate of 8 per cent. per annum, less tax, on the preferred ordinary shares, a final dividend of 4 per cent. and bonus of 2 per cent. on ordinary shares Nos. 1 to 3,000,000, and a dividend at the rate of 8 per cent. per annum and bonus of 2 per cent. on ordinary shares Nos. 3,000,001 to 6,000,000 was declared.

Sir Hugh Bell, Bart., Mr C. Arthur Head, Mr Charles Dorman, and Lieut.-Colonel Maurice L. Bell, C.M.G., were re-elected directors of the company, and Messrs W. B. Peat and Co. were re elected auditors.

A vote of thanks to the Chairman concluded the meeting.

AMALGAMATED COTTON MILLS TRUST, LTD.

COMPANY'S SOUND FINANCIAL POSITION.

COMPLETE ORGANISATION REACHED.

WORLD-WIDE REPUTATION OF COMPANY'S PRODUCTS.

The second annual general meeting of the Amalgamated Cotton Mills Trust, Limited, was held, on the 14th inst., at Essex Hall, Essex street, Strand, London, the chairman, the Right Hon. Lord Fairfax, presiding.

The secretary (Mr S. Hutchinson) having read the notice convening the meeting and the report of the auditors,

The Chairman said : Ladies and gentlemen,—Those of you who were present at the extraordinary general meeting of the company, held on March 30th last, will recollect I announced that the directors had acquired the shares of the well-known business of "Haslams," including the control of the subsidiary companies, which I will give in detail. This purchase was duly completed, and I am glad to announce that we were successful in acquiring the balance of the ordinary shares of all the subsidiary companies at a satisfactory price, thus giving us either by virtue of holding the whole of the ordinary shares in John Haslam and Co., or by the purchases just mentioned, the complete ownership of these companies.

These companies have proved a most satisfactory and profitable investment in spite of the abnormal conditions now ruling, not only in the Lancashire trade, but in trade the world over. During the past six months we have been busy welding these fine businesses into our amalgamation, and beyond the completion of the purchase of the businesses just referred to, your directors have thought it inadvisable to extend their activities, with one exception, viz., the Wardle Cotton Company, Limited, of Rochdale, which they obtained on extremely advantageous terms just before the close of our financial year.

This last acquisition consummates the policy which your directors have been endeavouring to develop for a considerable time, namely, to use all their waste products, but of course no time has elapsed in which to receive any income from this last addition to our investments.

FUNCTIONS OF THE TRUST.

Perhaps I had better now explain the functions of the Amalgamated Cotton Mills Trust, Limited.

The trust was formed for the purpose of acquiring share holdings in old and well-established cotton manufacturing and merchant businesses in Lancashire.

No company formed in recent years has ever assembled such a combination of businesses, whose ramifications reach all corners of the world and whose trade marks and reputations have an unrivalled standing.

I cannot emphasise too strongly the fact that we must not be looked upon as an ordinary cotton spinning concern—the companies whose shares we hold represent far more. Such respected names as Horrockses, Eckersleys, Haslams, and Hyde Buckley, which have taken more than a hundred years to build up, are as well known on the Continent and other parts of the world as they are in England.

It has been our invariable practice when acquiring control of a property by the purchase of shares to stipulate for the continuance of the existing management, and in all cases we have been able to do this. This preserves the goodwill of the companies, and I take this opportunity of tendering the thanks of the directors to the management and staffs of the various companies for their loyal and efficient services.

SCHEME FOR EMPLOYEES' PARTICIPATION.

Since I last adressed you I have many times been to Lancashire and personally visited the Mills of Horrockses, Eckersleys, Acme, Hyde Buckley's, Ashworths, Mill Hill, Thomas Moss, and Chorley, and it is my intention to visit the remainder of our mills at an early date. Everywhere I was impressed by the enthusiasm and loyalty of our executive, and in my conversations with the operatives I formed the opinion that everything that could be done for their welfare was receiving attention, and I came away quite satisfied that everyone throughout the organisation was conscientiously doing their utmost.

You may also remember that at our meeting in March last it was stated that we were anxious to bring about some scheme whereby the employees might participate in the prosperity of the company. These schemes are, I believe, generally arranged by the issue of shares, carrying very special rates as to dividends, which may be subscribed for to a limited extent by the employees. We went very fully into this matter, and concluded that the most satisfactory arrangement would be for the various companies to receive loan money from the employees at a rate of interest equivalent to the rate of the dividend paid on the ordinary shares of the Amalgamated Cotton Mills Trust, Limited, with a minimum of 5 per cent. per annum, free of income-tax.

The scheme has been in operation only a little over a month, and in spite of the fact that the mills are working on short time, the operatives have already made deposits amounting to over £35,000.

TRADE CONDITIONS.

Regarding trade during the twelve months under review, all our plants were kept running at their full capacity for the first eight months, and the demand for our goods was enormous. During the past four months, however, trade slackened off considerably, and in common with other concerns, we are, unfortunately, running on short time. All the evidence we can obtain leads us still to believe that stocks of finished cotton goods in many markets are practically exhausted, but the difficulty of finance, coupled with the sensational drop in raw cotton, has caused buyers to hold off. There are various causes that are operating against the confidence

of buyers the world over, one of the most important factors being the state of foreign exchanges, which is undoubtedly a most serious feature resulting from the effects of the war. The resumption of trade, however, can only be deferred for a period, when buyers will find it necessary to satisfy the demand for goods in their respective countries. This latent demand has also been intensified by the great shortage of goods resulting from four years' reduction of output during the war, and decreased production through reduced hours of labour.

The question of the present cost of raw materials is one which is receiving serious attention from the trade. To-day the price of cotton in Liverpool is well below the actual cost of growing and transporting it there. The law of supply and demand must eventually operate, and adjust prices to such a level as will be remunerative to cotton growers and those who handle the raw material, and this should in time bring about an improvement. It is difficult to forecast trade prospects for the ensuing twelve months, as although we know for a fact that cotton goods are badly needed the world over, we also realise that money must become easier for the home trade and foreign exchanges more stable before foreign buyers can resume purchasing in large quantities, or even for their absolute needs.

The lack of buyers during the last four months has necessarily increased our stocks, and causes us a certain amount of anxiety, but it will be satisfactory to the shareholders to know that during this period of unexampled depression in the cotton trade, and in spite of our stocks accumulating month by month, the whole of our concerns have been able to work on a profitable basis.

This is particularly satisfactory, inasmuch as I am assured by Col. Seddon Brown that the whole of the cotton in our warehouses is paid for, and that our stocks at cost, or at the low market price of to-day, represent a value of more than seven times our total indebtedness to the bankers of all our companies, after the payment of the final dividends.

In fact, our combined overdraft, after we have paid out the dividend to-day proposed, will be equal to very little more than one full week's turnover of all our concerns. I am further assured by our selling organisations that when the moment arrives for buyers to resume purchasing, our stock is of such a liquid nature that we shall be able very quickly to pay off our overdraft, and to be in credit.

NO MORE INVESTMENT IN OTHER BUSINESSES.

I may also definitely inform the shareholders that it is not the intention of your directors to purchase further businesses of any description, as we are of the opinion that we have now a complete organisation.

We propose to pay a final dividend of 1s 6d per share free of income-tax, making 4s 6d for the year.

You will observe that the directors propose to carry forward a balance of £117,523, which is equal to rather more than another 6d per share, free of income-tax, on the ordinary share capital of the company. The question of dividends received the very careful consideration of your directors, and after full discussion it was deemed advisable not to divide the profits received up to the hilt, but to carry forward a balance which will be available for distribution when conditions become more settled.

The directors feel sure that in these abnormal days, this conservative policy will meet with the entire approval of the shareholders. I should, however, emphasise that in addition to this balance of £117,523 which the Amalgamated Cotton Mills Trust, Limited, is carrying forward, the total net profits of the companies for the year, after making very liberal reserves for excess profits duty, corporation profits tax, income-tax, depreciation, and the creation of all necessary reserves, amount to considerably more than the sum declared by them in dividends, and this additional retainable profit will, therefore, remain invested in their businesses as further working capital, and our assets are thereby correspondingly increased in value.

COMPANY'S SOUND POSITION.

At our first annual general meeting, I informed you that only approximately 50 per cent. of the divisible profits of the companies whose shares we then owned had been distributed in dividends, resulting in an equivalent amount being retained by the companies as extra working capital.

This year, although more than 50 per cent. of the divisible profits have been distributed, the amounts retained by the companies aggregate some hundreds of thousands of pounds.

The directors recommend the shareholders to sanction the payment of a final dividend of 1s 6d per share, free of income-tax, in respect of the year ended October 31st last on the existing 4,650,000 ordinary shares. An interim dividend of 3s per share, free of income-tax, was paid on March 30th on the ordinary capital then issued.

The report states that the trading stocks taken at cost, or market price, which ever was lower, exceed £7,000,000. and that the net liquid assets exceed £5,000,000, after providing for all liabilities and after reserving over £1,800,000 for taxation, all of which we hope we shall not have to pay. In this respect I cannot help pointing out to you that this taxation represents about 8s per share on the entire 4,650,000 ordinary shares outstanding. This demonstrates very forcibly the great burden of taxation we have to bear; but, notwithstanding this, I can inform you that the net liquid assets of the companies at to-day's low prices are more than sufficient to pay off the debentures of Horrockses, Crewdson and Co., and the preference capital of this company. There would then be left, as security for the ordinary shareholders, the whole of our mills, which are mostly freehold, and the valuable merchant and other businesses we possess, to say nothing of the enormous goodwill of the great firms we own or control. For the eleven months of this year the exports of yarn and cotton manufactured goods from this country amounted to £375,000,000, out of the total exports from the United Kingdom of £1,040,000,000, or roughly 36 per cent. of the total. You will therefore observe that such a vast trade is one of the foundations on which the commercial supremacy of this country rests—but it is up to our politicians, bankers, trade union officials, working and all other classes, to see that none of the foundations are permitted to be destroyed. The commercial community is going through a very critical time, and it is hoped that the Government will approach this difficult problem in a statesmanlike manner, and endeavour to restore confidence in the business world. A great step in this direction would be the abolition of the unfair excess profits duty, which has done so much to ruin the business of this country.

The output of production in return for wages paid in the cotton trade is one which reflects great credit upon cotton operatives, and if only workpeople in other trades would follow their fine example, and give a greater production, it would be one of the first steps towards national financial rehabilitation, and their own well-being.

I formally propose that the report and accounts be received, approved, and adopted.

Mr Ormrod seconded the resolution.

COMPANY'S PROPERTIES' WORLD-WIDE REPUTATION.

Colonel N. Seddon Brown: When I last had the pleasure of addressing you, our directors had recently contracted to purchase the shares of the well-known undertaking of John Haslam and Co., Limited. This contract was duly completed, and we now have added to our numerous companies this large group. John Haslam and Co., Limited, includes, firstly, the great merchant house of Haslams, Limited, which is one of the best-known merchant houses for cotton goods not only in Lancashire, but all over the world, and which has a large number of departments selling a very great variety of cotton cloths. It also includes the Cellular Clothing Co. This company is a huge organisation, having several making-up factories equipped on most modern lines, its own bleaching plant, and laundries, and its warehouses, &c., for the distribution of its goods. The Cellular Clothing Co. is particularly famous for its Aertex Cellular Clothing, which it manufactures and sells to the public as a finished article. The firm of John Kershaw and Co. (Bolton), Limited, which is entirely a weaving firm making many varieties of fancy cloths and brocades, &c. The Riversdale Mill Co., Limited, another weaving firm, and the Haslam Weaving Co., Limited, which again is a well-known and well-equipped weaving mill. The Haslam Spinning Co., Limited, which owns three large mills, spins very high-class yarns chiefly from Egyptian cotton. The Bolton Heald Co., Limited, are makers of healds and reeds. These healds and reeds are important articles used in every weaving mill in the world, and the Bolton Heald Co. is able to supply all requirements in this direction for our various weaving concerns, and also has a valuable outside business, not only at home but abroad. The above-mentioned businesses, which comprise John Haslam and Co., Limited, brought into our organisation a great addition to the many qualities of cloths and yarns which we had for sale. They have necessarily very much extended the scope of our operations, and now that we have welded them into our organisation, enable us to increase our activities in many directions.

Horrockses, Crewdson and Co., Limited, is the largest and, I think, the oldest of our branches. It is a marvellous organisation, which has taken 130 years to build up. It has a wonderful group of absolutely modern spinning and weaving mills, with their own dye-works and their own huge warehouse in Manchester. Its merchant business alone is world-famed. It weaves nearly every kind of cotton cloth for almost every market.

To turn to Eckersleys, Limited, this again is a firm which has taken well over 100 years to build up. It now owns 10 large and modern mills, and it produces yarns and cloths chiefly for the Eastern and foreign markets, and its trade-marks, particularly the "Cat Head," are known and appreciated throughout the whole world. Robert Hyde Buckley and Sons is also an old-established business, and produces very high-class single, double, and gassed yarns. They are also makers of the best quality of voiles and similar cloths. The demand for their cloths was so great that

at the end of last year it was found necessary to purchase the Victoria Mills, at Chorley, in order to enable them to increase their cloth production. The Acme Spinning Company, Limited, own two modern mills, the electric power for driving the same being generated on the premises. These mills spin medium counts American yarns, and have often been quoted as examples of well-designed and efficient cotton mills. John Ashworth (1902), Limited, also own two mills, and are spinners of very fine super-combed yarns, with a big reputation for their products. Mill Hill Spinning Company, Limited, who have two mills in Bolton, are spinners of fine Egyptian yarns, with a very old-established business. Thomas Moss and Sons, Limited, are engaged in weaving only. This firm alone owns 4,400 looms, and makes high-quality cambrics, embroidery, cloths, &c. Redmayne and Isherwood, Limited, is a very well-known waste manufacturing and waste-dealing business. It owns excellent mills and warehouses, and deals with the waste products from our various spinning and weaving mills.

ARRANGEMENTS FOR UTILISING WASTE.

Having acquired these properties and organised them, so that they each hold their respective place in our huge amalgamation, the directors felt that we had practically completed our organisation. It was, however, realised that although we had made one step in the direction of dealing with our waste products, through our firm of Redmayne and Isherwood, we had not yet succeeded in dealing with all the waste that we made. With this object in view, we carefully considered as to whether we should extend the works of Redmayne and Isherwood, but owing to the great difficulty in obtaining machinery, and the enormous cost of building, we looked around to see if we could get over this difficulty in some other way, and I am glad to say that we were successful in finding a complete waste spinning plant and in acquiring the whole of its shares in October last. This property is called the Wardle Cotton Co., and is a most excellent waste spinning plant containing some 14,000 spindles.

We have now got an organisation which starts with the raw cotton. We purchase almost every kind of cotton, whether Egyptian or American. We spin it at one branch or another into almost every conceivable kind of yarn, from the very coarsest to the very finest, from the softest to the hardest, and we weave such a variety of cloths that there are few fabrics made from cotton that are not produced in either one branch or another. Further than this, we have our own dye-works. We do a certain amount of bleaching, we own factories for making-up garments, and we even go so far in some instances as to launder our own goods and finish them ready for wearing.

During the past year we have kept the whole of our plant up to concert pitch. We have never hesitated to explore every possible channel for outlets for our goods, and as evidence of this I would inform you that at the present moment we have two of our own staff paying visits to America, we have one paying a visit to South Africa, and another to Sweden, and members of our staff have recently returned from business trips to Switzerland, Germany, Austria, France, Spain, and the Balkan States. Quite apart from our spinning and weaving business, we own a very large amount of property, such as cottages, land, shops, dye-works, bleaching works, merchant warehouses, waste spinning plant, heald and reed making plants, and our total spindleage now has reached the huge figure of two and a-quarter million mule-equivalent spindles. The major portion of our property is freehold, and, where leasehold, is held on long lease.

The report and accounts were unanimously adopted, and the usual formal business was transacted.

CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

LARGE INCREASE IN PROFITS.

PROPOSED ESTABLISHMENT OF IRON WORKS IN NORTH CHINA.

CAPITALISATION PROPOSALS.

The eighth annual ordinary general meeting of the Chinese Engineering and Mining Company, Limited, was held, on the 16th instant, at Winchester House, Old Broad street, London, E.C., Mr W. F. Turner (the chairman) presiding.

The secretary (Mr Alfred W. Berry) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen.—The report and accounts for the year ended on June 30th last show that the anticipations which were formed a year ago in regard to the then current year's business have been fully justified, and were it not for the enormous demands which are made upon us for excess profits duty, corporation profits tax, and income-tax, there would be nothing left to be desired. Stated in the simplest terms, the result is that we have made a profit of £1,100,000, of which the Government takes 57½ per cent., and we keep the remainder.

The net profit of the Kailan Mining Administration, after providing for interest on our 6 per cent. Kailan bonds, redemption of bonds for the year, reserve for depreciation, and the profit to which the Chihli Government is entitled, amounts to $8,917,456. This is a remarkable advance on the net profit of the preceding year, which was a trifle under six million dollars, and is due to a very large increase in the sales and to higher prices. Our share of this profit amounts to $4,581,804, compared with $3,162,910 last year, which is an increase, in round figures, of about 45 per cent.

FAVOURABLE EXCHANGE.

We have had the further advantage of a marked rise in the rate of exchange. The average rate of our remittances for the year ended June 30th last was, in round figures, 4s 10½d, while the average rate for the preceding year was 3s 9¾d, an increase of over 1s per dollar. Consequently, our proportion of the working profit in China works out at about £240,000 more than it would have done had the average rate of exchange been maintained at the same figure as in the previous year, but in that case our liability for revenue taxes would have been reduced accordingly. The rate reached its highest point in the month of February last, and by the end of June last it had declined to about 3s 8d per dollar. Important as this is, it is secondary to the fact which I have already stated of the great increase in the trading profit in China.

PROFIT AND LOSS ACCOUNT.

The amount brought to the credit of our profit and loss account, inclusive of interest in China, is £1,169,824; interest in Europe amounts to £41,895. There are other items, which amount to £4,643, the total credit being £1,216,363.

The expenses on the other side of the account do not require any comment, except that we must look for a substantial increase in the London expenses during the present year, as the increase in the work necessitates much larger offices and staff. There is one item, however, which arrests attention, and that is the loss on the sale of 4 per cent. Funding Loan, amounting to £86,315. The 4 per cent. Funding Loan was issued at 80 per cent. in the month of June, 1919, about eight months after the Armistice. The object was to convert the War Loan, Exchequer bonds, and National War bonds then outstanding and to raise fresh money, and you will recollect that every possible pressure was put upon the public by the Government to induce conversions and subscriptions. At that time we held £665,000 of the various series of War bonds.

We converted £514,000 into the Funding Loan, £150,000 was retained and applied in payment of excess profits duty, and we subscribed for £100,000 of the Funding Loan at 80 per cent. All I need say is that we did this in response to the strong appeal of the then Chancellor of the Exchequer, Mr Bonar Law, because we considered it was the right and patriotic thing to do, and if we found ourselves in such a situation again, which Heaven forbid, where the same considerations arose, we should take the same course. There is a kind of consolation in the thought that this loss is due to national and not individual or sectional causes, and that had we not sold when we did our loss would have been still heavier.

COMPANY'S TAXATION BURDENS.

The balance carried down as net profit for the year is £1,112,412, which compares with £652,873 for the previous year. The balance brought forward from the preceding account was £285,100, which makes a total credit of £1,397,512. Out of this sum £636,654 goes in taxation. First and foremost comes excess profits duty, estimated at £542,000, but we had a credit balance on this account of over £17,000, which reduces the debit in the account to £524,000. I am not going to say anything on the merits of this particular tax, for it is now universally condemned, and it remains for each one of us to use whatever influence we possess towards ensuring that it shall not reappear in the Budget of the next financial year. Corporation profits tax amounts to £21,000, the tax being operative only in the second half of our financial year. Income-tax was

£90,952. The final balance was £760,857, as against £493,846 in the previous year.

BALANCE-SHEET ITEMS.

I need not detain you by going through the balance-sheet in detail. It will be sufficient to point out that the creditors amounted to £105,000, as against £234,000 in the previous balance-sheet, the explanation being that the arrears of coupons have been greatly reduced, and the position is gradually becoming normal in this respect. The reserve for excess profits duty and corporation profits tax amounted together to £563,000. On the other side, the cash, Treasury bills, and War Loan amounted to £1,219,000, so that from a financial point of view the position is quite satisfactory.

An interim dividend of 10 per cent., free of income-tax, was paid on May 15th last, which amounted to £100,000. We propose that a further dividend be declared of 20 per cent., free of income-tax, which will make a total of 30 per cent., free of income-tax, for the year (the equivalent of about 43 per cent., subject to income-tax), and that the dividend be payable to-morrow (December 17th). The further remuneration to which the directors are entitled under article 83 of the articles of association is £18,962, and the balance to be carried forward is £441,894. This balance represents an accumulation of profit which has been going on month by month and year by year during the eight years of this company's existence.

CAPITALISATION PROPOSALS.

It is, in fact, employed in the business, and it will continue to be so employed; therefore we have come to the conclusion that the bulk of it should be converted into share capital. We propose to capitalise £400,000 of it, and to issue to the shareholders *pro rata* 400,000 fully-paid shares of £1 each. You have learned from the terms of the notice of the meeting the steps that have to be taken to effect this. There will remain a balance of £41,894 to be carried forward. Out of this sum we propose to provide for the duty on the increase of capital and the stamp duty on the share warrants to bearer, in which form the greater part of the £400,000 of capital will have to be issued. I may mention here that there will be an enormous number of these bearer certificates. The printing, preparation, and signing will take a considerable time, so that we do not expect to be in a position to begin to deliver them for about three months.

The next paragraph refers to the high rates of exchange during the past year, with which I dealt in my opening remarks.

INCREASED SALES OF COAL.

The sales of coal for the year amounted to 4,010,980 tons, being an increase of 882,303 tons over the preceding year, which is about 28 per cent. The paragraph states that the demand for our coal continues unabated, but I will refer to the prospects of the present year later on.

I wish to say here a word about the unfortunate explosion which occurred at one of the mines in the month of October last, which was reported in the newspapers. We have not yet received the technical report, but everything points to the accident being due to the miners tampering with the Davy lamp, which is in use throughout our mines, and, indeed, throughout the world. The quantity of fire damp at present in our mines is comparatively slight, and we have been remarkably free from explosions. It is a significant fact that cigarettes were found concealed on the bodies of some of the unfortunate victims. There is no possible question as to the care and efficiency with which these mines are run. The promptest measures were taken to deal with the situation and minimise the loss of life, and the utmost consideration was shown in every way to the families of the deceased.

You may also have seen a reference in the Press to a contract having been made for the sale of our coal to Europe. That was an isolated transaction which took place on the Continent. It is not likely to be repeated, for the satisfactory reason that we have in China and the Far East a market for all the coal we can produce.

I might mention here that the investigation of the Tatung Coalfield, to which reference was made at the last general meeting, has been restricted owing to the pressure of other work, but will be resumed when circumstances permit.

IRON ORE ON THE YANGTSZE RIVER.

The next paragraph deals with an entirely new subject. Some considerable time ago it came to the knowledge of the Kailan Mining Administration that there existed a large deposit of iron ore on the Yangtsze River, which was owned by a Chinese company, and it was suggested that in view of the administration's exceptional position in regard to the supply of coal the deposit might be worth investigating with a view to the establishment of iron-works in North China. An examination was made and a preliminary option was obtained for a sufficient period to allow of an expert being sent out from Europe to examine and report upon the deposit. For that purpose we engaged the services of Mr Frank Merricks, the president of the Institute of Mining and Metallurgy, who visited and reported upon the property. He found that the deposit contained about 4,000,000 tons of workable ore, that it was of high grade, that the situation was favourable, being only about 11 miles from the Yangtsze River, that the deposit could be worked by open cast, that there was abundant labour, and that conditions generally were satisfactory.

A contract was therefore made by the Kailan Mining Administration securing this supply of ore on suitable terms. Investigations and negotiations are proceeding with regard to supplies from other sources. The intention is that the works shall be located at Chinwangtao, which is the port controlled by the Kailan Mining Administration and the seat of its export trade. Borings have been made for the purpose of locating a suitable site, and the results which have recently come to hand are being studied. Mr F. W. Harbord, of Messrs Edward Riley and Harbord, president-elect of the Institute of Mining and Metallurgy, is acting as our technical adviser. He is preparing plans for the general lay-out and detailed designs of the blast furnace plant and preliminary estimates of the expenditure which will be entailed by the scheme.

There are many matters still under investigation, and it is much too early for us to give figures as regards profits or capital expenditure. Major Nathan, whom we are glad to see here to-day, has made a protracted visit to London in connection with this scheme and other matters. He is returning to China at an early date, and will in due course submit the entire project in the form which it has now assumed to the board of the Lanchow Mining Company, who are our partners in the Kailan Mining Administration, and will discuss the subject with them from the technical, commercial, and also the financial point of view. All we can say to-day is that the question of the establishment of an iron industry in North China is one of the greatest importance, and that the Kailan Mining Administration, in the immense resources of the Kaiping coalfield, the facilities it possesses in the Port of Chinwangtao, and in its technical and commercial organisation, and in the cheapness of the labour available, has every possible advantage for creating a profitable enterprise.

INCREASE OF CAPITAL.

The next paragraph states that we propose to increase the authorised capital of the company by the creation of 1,000,000 shares of £1 each. Four hundred thousand of these shares, as I have already stated, will be required for capitalising £400,000 of accumulated profit, and there will remain 600,000 shares available for issue as and when required. You will notice that this increase of capital is proposed not only with regard to the ironworks scheme, but also in view of the capital expenditure which will be required for the development of the existing business of the Kailan Mining Administration. At the general meeting last year I told you that, in view of the ever-increasing demand for our coal, it was proposed to develop the output capacity of the existing mines—the mines now in operation—to enable them to produce up to 4½ million tons per annum, and then to proceed to open a new mine on a scale which, when in full working, would produce a daily output of about 5,000 tons, or, say, 1,500,000 tons per annum. This would make a total of 6,000,000 tons per annum, the period required to accomplish it being about five years.

SHIPPING FACILITIES AT CHINWANGTAO.

The shipping facilities at Chinwangtao are already inadequate, and it is necessary that they should be largely and rapidly increased to enable the increasing business to be handled efficiently. After much study the conclusion is that the best means of attaining the object is to build an entirely new breakwater outside the existing one, and to provide in the first instance five additional berths, making twelve in all. This work will be spread over a period of about three years, and it will be undertaken by the staff of the Kailan Mining Administration.

There is considerable capital expenditure which will have to be undertaken for other purposes, incidental to the large increase of the business, which I need not go into on this occasion.

You have seen from the balance-sheet that we are in a strong financial position; therefore, we do not anticipate having to make any further capital issue in the near future, but the existence of the 600,000 reserve shares will place us in a position to act whenever circumstances require.

CURRENT YEAR'S PROSPECTS.

Now, as regards the prospects for the current year. It is stated in the report that the demand for our coal continues unabated. The actual sales for the first five months of the year, however, show some slight falling off. That, however, is due not to any slackening of demand, but to difficulties in regard to delivery, owing to the interruption of railway traffic and the inadequate supply of trucks caused by the recent hostilities in North China. I cannot do better than read you some remarks on this subject by Major Nathan in a report which he has prepared for the information of the directors. He says that: "Since the close of the financial year under review our sales have been limited only to the amount of coal it has been possible to carry by rail.

"The party struggles in China have led to the railways being utilised for the carriage of hordes of undisciplined soldiery. It is well known, and has been experienced in the war in South Africa and in the late Great War, that control of railways under military organisation is extremely difficult. In China such control is far more difficult to exercise than with a disciplined European army. The railway staff, material, and traffic become rapidly disorganised, a disorganisation which takes a considerable period to recover from.

"As a result of the struggle for power in North China our position has become exceedingly difficult; on the one hand, pressing demands for coal from all sides, on the other inability to meet them, not because of restricted output, or through any fault of our own, but due to inability to obtain the necessary means of conveying the coal by rail. As a result, while at the present moment we have many hundreds of thousands of tons of coal to deliver against contracts, we are obliged to stock coal at the mines at the rate of several thousand tons a day. Matters have improved lately, but we are still not able to transport the full output, and arrears of supply are increasing rather than diminishing.

"Generally the position with regard to sales of coal is still as satisfactory as I anticipated in my last report," extracts from which I read at the last meeting. "There are three difficulties in the way," he continues, "of the absolute free development of our trade—namely, shortness of output, restricted railway facilities, and insufficient port accommodation. The opening of the two new mines now in process of development will remedy the first; the second will be remedied by the doubling of the railway between the mines and Chinwangtao, a work that, in view of the pressure likely to be brought on the Chinese Government, cannot long be delayed. The last difficulty will be overcome by the scheme for the extension of the harbour at Chinwangtao, to be commenced next spring. When these three causes of check to our development have been removed the expansion of our business should be rapid and continuous."

I need only add to that quotation that the sales for the last five weeks reported by cable show a steady increase, from which we infer that the difficulty in regard to transport is being overcome, and that we shall shortly reach our former maximum.

CONTRIBUTIONS TO NORTH CHINA FAMINE FUND.

There is one other matter to mention. You will have seen in the newspapers report of the famine in North China, affecting five provinces and 15,000,000 people, whose condition is beyond description. The board have felt it their duty to vote a sum of £5,000 to the relief fund which is being opened at a meeting at the Mansion House this afternoon. A cheque for that amount has been sent to the honorary treasurer of the fund, together with a cheque for £1,000 as a personal contribution from the board of directors.

I now move: "That the directors' report and accounts to June 30, 1920, be and they are hereby received and adopted, and that a final dividend be declared of 20 per cent., free of income-tax, making 30 per cent. for the year, free of income-tax, payable on December 17, 1920."

Mr Félicien Oattier formally seconded the resolution, which was then put to the meeting and carried unanimously.

The Chairman next moved: "That the retiring directors (the Chevalier E. de Wouters, Mr Emile Francqui, and the Right Hon. Lord Southborough, G.C.B.) be and they are hereby re-elected."

Colonel H. A. Micklem, C.B., C.M.G., D.S.O., seconded the motion, which was unanimously agreed to.

The auditors (Messrs Annan, Dexter and Co.) were reappointed, on the motion of Mr Sledge, seconded by Mr Arnold.

CAPITALISATION OF PROFITS.

The Chairman: I now move the resolution, which you have heard read in the notice convening the meeting, for the necessary addition to the articles of association in order to provide for the capitalisation of profits, as has been explained to you, namely:—

"That the articles of association of the company be altered by inserting the following new article next after article 121, namely:—

"121a. A general meeting may direct the capitalisation of the whole or any of the profits for the time being of the company, or any accumulations of profits carried to reserve or any sum carried to reserve as the result of a sale or revaluation of the assets or goodwill of the company, or any part thereof, or any sum received by way of premium on the issue of any shares, debentures, or debenture stock of the company, by the distribution among the holders of the ordinary shares of the company of paid-up shares, debentures, or debenture stock of the company, and the board shall give effect to such resolution and shall apply such portion of the profits or reserve fund as aforesaid as may be required for the purpose of making payment in full at par for the shares, debentures, or debenture stock of the company so distributed, provided that no such distribution shall be made unless recommended by the board. Where any difficulty arises with regard to the distribution the board may settle the same as they think expedient, and may determine that cash payments may be made to any members in order to adjust the rights of all parties, and generally may make such arrangements for the allotment, acceptance, and sale of such shares, debentures, or debenture stock, and otherwise as they may think fit. Where required a proper contract shall be filed in accordance with the provisions of the Companies (Consolidation) Act, 1908, and the board may appoint any person to sign such contract on behalf of the holders of the ordinary shares participating in such distribution, and such appointment shall be effective, and the contract may provide for the acceptance by such holders of the shares to be allotted to them respectively in satisfaction of their claims in respect of the sum so capitalised."

Mr Edmund Davis seconded the resolution, which was passed unanimously.

The Chairman: That, gentlemen, concludes the business of the meeting, and I have only to thank you for your attendance.

VOTE OF THANKS TO THE CHAIRMAN AND DIRECTORS.

Mr Micklem: Gentlemen, before we separate I think we ought to pass a vote of thanks to the chairman and directors for their successful management of the company during the past year. I have much pleasure in moving that.

Mr Edmund Davis: I do not rise to second that resolution—it would not come very well from me—but I do wish to congratulate the shareholders on Mr Turner having been elected chairman of this company. Mr Turner devotes practically the whole of his time to our affairs, and there is no better or more suitable person in the City to assume this most important office.

The vote was accorded by acclamation.

THE CHAIRMAN'S REPLY.

The Chairman: Gentlemen.—These observations are quite unexpected. I am much gratified that you concur in them, and it would be ungracious on my part on this occasion if I were not to mention, as I did last year, the services of Major Nathan in China. It is years now since he was able to attend one of these annual meetings. On the outbreak of the war he exerted himself to the utmost to get over to this side to take part in it in some capacity or other, but it could not be done. He had to remain in China in order to attend to this company's business, but he contrived to do valuable work in Tient-sin from a military point of view, and I am pleased to say that that work has been recognised by the authorities here, and that he has received a suitable reward. We hope we shall have the pleasure of seeing him here again on another occasion before long.

The proceedings then terminated.

THE EASTERN TELEGRAPH COMPANY, LIMITED.

A RECORD YEAR'S RECEIPTS.

The eighty-ninth ordinary general meeting of the Eastern Telegraph Company, Limited, was held, on the 15th instant, at Electra House, Finsbury pavement, London, Sir J. Denison-Pender, G.B.E., K.C.M.G., chairman of the company, presiding.

The secretary (Mr A. R. Hardie) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—When I had the pleasure of meeting the stockholders last year I remarked that our gross revenue had reached a figure considerably in excess of any previous year in the history of the company, and was no less than £1,438,000 more than the pre-war year 1913; but the gross revenue shown in the accounts now before you exceeds that of last year by £694,000, the total of the year under review having amounted to £4,059,000.

Gentlemen, these are remarkable figures, but we must not overlook the fact that this large income has not been earned without a very considerable increase in the working expenses, which were approximately £653,000 more than for the year 1918.

NET REVENUE.

Notwithstanding these exceptionally heavy expenses, our net revenue amounted to £1,851,883, or £40,426 in excess of last year. Therefore, after providing for income-tax and excess profits duty payable in England, which I am glad to say is £430,977 less than the preceding year, and interest and dividends on debenture and preference stocks, there is, with the amount brought forward, an available balance of just over £1,316,000. So that, after deducting the amount required to pay a dividend of 10 per cent., free of income-tax, on the ordinary stock for the year ending December 31, 1919, which, I may incidentally remark, is 2 per cent. more than the dividend and bonus paid during pre-

vious years, there is a surplus of £916,000, out of which we have carried to the general reserve fund £500,000, the same amount as last year. No doubt we could have carried a larger sum to this fund and reduced the amount carried forward to the next accounts accordingly; but, as explained in the report, we have decided to carry forward the exceptionally large sum of £416,000, in view of the additional heavy taxation, &c., which we shall have to meet in 1920.

You will no doubt remember that I stated at the last meeting that the amount paid and due to the Government by the Associated Companies for income-tax and excess profits duty for the five years totalled to no less a sum than £6,000,000. The general reserve fund has been debited with £573,264 in respect of a new cable between Porthcurnow and Gibraltar, and the partial renewal of some of our main-line cables, &c.

As foreshadowed at our last meeting, we have in contemplation a heavy programme of cable laying and renewals, and this was further referred to at the special meeting called to authorise the increase in the ordinary capital of the company by £1,000,000. During the current year we have expended about £1,200,000 on additional cables from Malta to Alexandria and from Aden to Bombay, part of which will be charged to capital expenditure, as the new capital was specially provided for this purpose; but when the whole of our present programme is carried out a considerable sum will be charged against the general reserve fund according to our usual policy. I regret to say that the sucurities in which our reserve funds are invested show a further heavy depreciation, in common with other concerns holding gilt-edged securities, and we have considered it advisable to allocate a futher sum of £200,000 from the general reserve fund to the special fund set aside as a provision for this depreciation, which now amounts to £840,000. The value at which the investments appear in the balance-sheet may be taken as the approximate actual value as at December 31, 1919.

Every effort has been made on our part to re-establish such a service for commercial correspondence as was generally acknowledged to be second to none in speed, secrecy and freedom from errors in transmission. I am now glad to be able to report that a great improvement has already taken place, and when the whole of the additional cables ordered by this company and the Eastern Extension Company are laid and working we fully anticipate that our public service will be even better than it was before the war.

Gentlemen, it is due to our staff that I should again refer to the commendable part taken by them in assisting us to meet the difficulties under which we laboured, and for so manfully bearing the hardships many of them had frequently to undergo, and for willingly performing the extra work, especially in trying climates, on account of the great increase in the volume of traffic at a time when circumstances over which we had no control made it impossible to supply additional men to assist them.

WORK FOR THE STAFF.

Every effort is being made to overcome the shortage of staff, so as to relieve our present employees and reduce the amount of overtime which they are now called upon to perform.

The problem of dealing fairly with the claims of capital and labour is a somewhat troublesome one, as it depends to a great extent on the earning powers of their combination in specific cases. We have, in the interest of all concerned, to consider the future. In the meantime, we are making temporary payments in the form of bonuses and allowances to meet the adverse conditions existing, and these abnormal conditions will be considered by the board from time to time as they arise.

You are aware that a pension fund for the staff was established some years ago, to which the company and the staff contributed annually an equal percentage on the salaries. In order to assist the staff the company has relieved them of this burden, and now contribute the whole amount—the annual cost appearing under the heading "Staff Pension Fund," on page 4 of the revenue account being £35,552, or over £12,000 more than last year.

By the desire of a large number of the staff an associated companies' "Widows' Pension Fund" is also in progress of formation. It will be supported by annual contributions by the staff themselves. It was found, however, on actuarial examination that the annual premiums required to secure a pension of £100 to the widow or certain dependents of a deceased member of the British staff, especially in the case of the older members, would have been more than they could have conveniently spared. The boards of the associated companies have, therefore, decided to assist those members of the staff who elect to join the scheme by making an initial payment of £38,000 to the fund, this company's proportion being £20,000, and the companies will, further, also assume certain responsibilities in future, so as to endeavour to assure the solvency of the fund.

Mr Francis Alexander Johnston seconded the motion, and, no questions being asked, it was put to the meeting and carried unanimously. The usual formel business terminated the proceedings.

WESTERN TELEGRAPH COMPANY, LIMITED.

"A VERY SATISFACTORY STATEMENT OF ACCOUNTS."

The eighty-seventh ordinary general meeting of the Western Telegraph Company, Limited, was held, on the 15th instant, at Electra House, Finsbury pavement, London, Sir John Denison-Pender, G.B.E., K.C.M.G., the chairman, presiding.

The secretary (Mr E. Steer Hodson) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—It is with much pleasure that the board submit for your consideration what we feel sure you will agree is a very satisfactory statement of accounts. From this you will observe that the revenue from all sources has increased by a little over £719,000, and it is gratifying to know that this represents a greater volume of traffic with all the States of South America which are served by the company's system of telegraphic cables. The large increase of revenue has not been earned without a corresponding extra cost. The net increase in working expenses amounted to £276,000, and income-tax, excess profits duty, and corporation profits tax were more by £151,000. The result is that after paying quarterly dividends amounting to 10 per cent., free of income-tax, for the year (in place, I would remind you, of 8 per cent. paid for some years previously), there has been transferred to the general reserve fund £450,000; to provision on account of investment fluctuations, £145,000; to maintenance ships' reserve fund, £50,000; and to land and buildings depreciation fund, £50,000. Although £450,000 has been credited to the general reserve fund, I must remind you that £317,000 has been debited to that fund, being part of the cost of new cables and renewals and loss on sale of investments. The realisation of these investments was necessary to pay for the new cable manufactured prior to the recent issue of new share capital. The net increase in the general reserve fund is consequently only about £133,000. The provision on account of investment fluctuations represents the difference between the cost and the market value as at the close of our financial year.

ADDITIONAL SHARE CAPITAL.

Referring to the additional share capital, 103,965 shares of £10 each were offered to the shareholders at par, being at the rate of one new for every two old shares. Of these about 96,000 were accepted. The balance was offered to the staff at par up to a maximum of 20 shares per member, to be held for not less than three years. About 5,500 shares have been accepted on these terms by the staff. The Eastern Telegraph Company, with whom we are so closely associated, and with which company an interchange of staff at times takes place, issued also a million pounds additional capital, the unaccepted balance of which was less than that in our company. This balance was also offered on similar terms to its staff, which staft far exceeds in number the employees of the Western Company, and their applications were greatly in excess of the amount available. The balance of the Western shares have, therefore, been offered to the Eastern Company for allotment to its staff. The Eastern Extension Company, also with a smaller staff than the Eastern Company, had a surplus, after meeting the applications of its staff, and have dealt with that surplus in a like manner, but even with the help of that company and our company the Eastern will not be able to meet fully the limited applications for shares from its staff.

NEW CABLE FROM NORTH BRAZIL TO FLORIDA.

Our new cable from North Brazil to the Island of Barbados, to which I referred at our last general meeting, was laid in September last. A short time before an expedition started to lay the connecting cable, owned by our American friends the Western Union Cable Company, from Barbados to Florida, there to join up with the best landline system of the latter company in the United States. At almost the last moment, however, we were all surprised to learn that the American Government refused to permit the Western Union Company to land its cable on American soil, the objection being that the Western Union intended working in conjunction with us, a British company, said to hold exclusive rights from the Government of Brazil for submarine cable communication. I would impress upon you the fact that we, the Western Company, hold no exclusive privileges for international cables. It is hoped that communication will shortly be made, and these two sections joined up, and the new service be then opened between Brazil and the United States, but it may not be carried out by the route originally contemplated.

At the last general meeting I referred to the continued interruption of the original cable between St Vincent, Cape Verd Islands, and Pernambuco; we have two cables connecting these points; a large portion, amounting to nearly 1,000 miles, was last month very successfully renewed, and the cable is again in good working order.

NEW CABLES TO BE LAID.

In the near future we are committed to lay additional cables on the Brazilian coast between Pernambuco and Maranham, Pernambuco and Maceio, Victoria, and Rio de Janeiro, and Rio de Janeiro and Santos. We intend also to afford additional facilities to Santa Catharina and Rio Grande do Sul. These places I have mentioned are all along the Brazil coast, and will form collecting grounds for our main cable, as well as carry local traffic. An order has been placed for the necessary cable to renew the older section between Lisbon and Madeira; the existing cable has been laid some years, and would have been renewed before had not the war prevented our carrying out the work. This programme, with cable for stock, will entail a further expenditure of close on £1,000,000.

About 12 months ago a freehold house and 10 acres of land on the bank of the Thames at Twickenham were purchased on behalf of the Associated Cable Companies. This has been converted into a club house and recreation grounds for the staff. The capital sum necessary to inaugurate the club is about £52,000, and has been borne by the three chief companies, the Western share of which is one-fourth. The club was opened last summer, and one of the conditions is that it shall be self-supporting after being handed over in a thoroughly efficient state. It is managed by committees appointed by the staff, and has been hailed as a great boon..

SPLENDID WORK OF THE STAFF.

There are one or two matters which I consider should be brought to the notice of shareholders—namely, the admirable manner in which the staff continue to assist in meeting the difficulties under which we still labour owing to the abnormal amount of traffic with which we have to deal, and the way in which the boards have recognised their loyal and hearty endeavours to cope with the work. I am very glad to say that of late we have been able to reduce considerably the delay in the transmission of telegrams.

The proceedings terminated with a cordial vote of thanks to the chairman, directors, officers and staff of the company.

EASTERN EXTENSION, AUSTRALASIA AND CHINA TELEGRAPH COMPANY, LIMITED.

SATISFACTORY YEAR—LARGE INCREASE IN GROSS RECEIPTS.

The ordinary general meeting of the Eastern Extension, Australasia and China Telegraph Company, Limited, was held, on the 14th instant, at Electra House, London, Sir John Denison-Pender, G.B.E., K.C.M.G. (the chairman), presiding.

The Chairman said that it was hoped to hold the next meeting at a much earlier date. The enforced delay this year did not prevent the payment at the usual time of the final dividend for 1919, the total distribution being 10 per cent., free of income-tax, against 8 per cent. for 1918. The accounts were highly satisfactory. The gross receipts were roundly £2,446,000, against £2,070,000, an increase of £376,000, notwithstanding the fact that in 1918 the revenue was £562,000 more than in 1917. Compared with the pre-war year 1913 the revenue of the past year showed an increase of over 300 per cent. For the current year the traffic was being well maintained. There had been a considerable addition to the working and other expenses, which amounted to £961,000, against £620,000 in 1918, or an increase of £341,000. This absorbed most of the additional revenue, but the reduction of excess profits duty from 80 per cent. in 1918 to 40 per cent. in 1919 reduced the expenditure on this account by £455,000. The balance now to be dealt with was £1,041,000, with £41,000 brought forward from 1918. They had distributed £300,000 in payment of the 10 per cent. dividend, and they proposed to transfer £350,000 to general reserve fund, to make a further provision of £200,000 on account of investment fluctuations, making up the depreciation shown at the end of 1919 within a few thousand pounds, and to carry forward £232,000. The retention of this large sum was due to the uncertainty regarding their taxation liability and the large expenditure required in the near future for developing and improving the company's service in the Far East.

The additional cable they had arranged to lay between Madras and Singapore, of large carrying capacity, was now in manufacture and was expected to be laid and opened for traffic early next year. The existing two cables between Madras and Penang were at times taxed to their utmost capacity. The Great Northern Telegraph Company's through route to the Far East materially assisted in carrying the China and Japan traffic up to 1914, when it became interrupted and was not yet restored. Consequently this company's cables were still carrying this traffic in addition to the large increase in other directions, and additional capacity was now much needed. When the Great Northern route was again working they would be relieved of some of the traffic, but in any case the new cable would benefit the telegraphing public. They had, therefore, no hesitation in incurring the expenditure for the additional cable between Madras and Singapore.

All the new shares had been allotted, with the exception of 2,165 representing the fractional shares. These would be disposed of, for the benefit of the shareholders entitled to the same, when the directors considered the time favourable for the purpose.

The Chairman concluded by moving the report and accounts, and that the dividend of 10 per cent., free of income-tax, paid in respect of the share capital of the company for the year ended December 31, 1919, be approved.

Col. the Hon. Arthur G. Brodrick, T.D., A.D.C., seconded the motion, which was carried unanimously; and resolutions were afterwards passed re-electing the retiring directors, Mr J. C. Denison-Pender, M.P., and Sir A. J. Leppoc Cappel, K.C.I.E., and re-appointing the auditors, Messrs Deloitte, Plender, Griffiths and Co.

A cordial vote of thanks to the chairman, directors, general manager and staff terminated the proceedings.

ASHANTI GOLDFIELDS CORPORATION, LIMITED.

LARGE AMOUNT OF ORE RESERVE.

NEED FOR INCREASED GOLD OUTPUT.

The twenty-third ordinary general meeting of the shareholders of the Ashanti Goldfields Corporation, Limited, was held, on the 14th instant, at the Holborn Restaurant, High Holborn, London, Mr Jeremiah Colman, J.P., presiding.

The secretary (Mr Horace Morgan, A.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, after referring with deep regret to the great loss which they had all sustained by the tragic death of their chairman, the Earl of Bessborough, said that the share capital had been increased last January by the issue of the balance of the authorised capital which was offered *pro rata* to the shareholders—namely, 132,308 shares of 8s each, and the balance of 14,635 shares at 21s each. As a consequence of this operation the reserve was increased to £155,000, the share premium of the issue having been carried to that account, while the company's cash was strengthened by a sum of £67,010. The other items in the accounts presented very little change from last year, with the exception of the total profit, which was less by about £30,000, due largely to the increased working costs and to the shortage of labour.

ORE RESERVES.

The ore reserves position was extraordinarily strong, notwithstanding the fact that they had suspended shaft-sinking for about three years. Lateral developments on the Ashanti mine showed that reserves had been decreased by only 24,000 tons, of a gross value of £282,000, although in the meantime they had extracted 234,000 tons of a gross value of £1,203,000, and had paid dividends amounting to £410,000. The developments on the 18th level were very satisfactory. On last year's estimate, the block between 18 and 17 levels showed 86,100 tons of 23½ dwt ore. For this year the estimate, owing to the useful extensions opened up towards the south-west, showed 99,300 tons of 25.2 dwt ore, and it was believed they had not yet reached the ore limits in this direction. The labour position was complicated by many causes. There was shortage of labour owing to counter-attractions, such as cocoa-growing and mahogany-cutting, in connection with which very high wages were paid; then they had Government and other recruiting in the Northern Territories, which had checked at the source the supply of labour. Changes in currency had also very disturbing influences, while food prices had risen considerably. They were, however, taking steps towards overcoming this state of affairs by making the work at the mines more attractive, by raising the pay, and by making provision for supply of foodstuffs at reduced terms. Whilst these measures would no doubt relieve the situation, they must look to better and more economical methods of labour-saving for permanent results.

TREATMENT OF ORES.

With regard to the problem of treating their ores, up to 1907 they were dependent for their output on wet crushing in a stamp mill and on the amalgamation of raw cyanidation of the tailings. It was found then by actual trial that dry crushing, followed by roasting and cyanidation, was somewhat more costly than wet crushing, but gave considerably better economic results by reason of improved extractions. For that purpose the central treatment plant on dry crushing lines was erected, and for the past ten years had given excellent results. As wood was plentiful and cheap, and the special spares required for dry crushing machinery were obtainable at reasonable rates, the economic advantages of dry crushing remained unchallenged. Latterly, owing to the increased cost of fuel and of the spares necessary for dry crushing, together with the increased cost of labour, the question of reversion to wet crushing was again engaging the attention of the board. They would, however, make no change in their present procedure until they were satisfied as to

which direction the balance of advantage lay. In this connection, he thought it would be interesting to them to know that the board had made arrangements with the Minerals Separation Company to send out one of their staff to the mines to demonstrate what could be done with their ores by oil-flotation concentration, but, as he had said, they would proceed slowly and with the utmost caution, and in so doing they had no doubt they would arrive at the most economic method for treating their ores.

PROSPECTS.

The immediate outlook of the company was very clearly stated in the concluding paragraph from their consulting engineer's report, in which he said: "The absurd disproportion which exists for the moment between the large amount of ore easily accessible underground and the slow rate at which it can be extracted is certainly exasperating, but from every other aspect the great available ore reserve is a highly satisfactory feature. After three years' suspension of shaft-sinking, during which time the profit value has only been reduced by £287,000, considerably less than the dividends paid out for two of these years, the ore reserve in Ashanti still stands at 395,100 tons, of a gross value of £2,242,000 and a profit value of £833,000 (this is based on gold at par). This reserve, which is more likely to be increased than diminished when next year's report comes to be written, constitutes a bright feature in the situation, which cannot long be eclipsed by temporary setbacks and checks."

He then moved that the report of the directors, dated December 6, 1920, and of the auditors, dated November 26, 1920, and the accounts for the year ending June 30, 1920, be received, approved, and adopted.

SIR GEORGE LAWSON JOHNSTON'S SPEECH.

Sir George Lawson Johnston (vice-chairman), in seconding the resolution, said: The details with regard to the mine have been so fully discussed in the speech from the chair that, in seconding, I shall only refer to certain features of a general nature that are of interest to all. It is, I think, desirable that it should be more generally known that gold mining is not a matter of picking up nuggets, as is sometimes popularly supposed, but the running of a very highly-technical business, full of difficulties that can only be overcome by painstaking effort and research. A gold mining company not only has to bear large additional costs, including labour, materials, and renewal of plant, &c., like other industries, but, in addition, is up against the very serious disadvantage that it is unable to proporticnately raise the price of its product.

If the value of gold was fixed on the basis of its indispensability to the financial and commercial communities as the foundation of credit facilities, I believe that it would be quoted at a higher premium than it is to-day, and probably that would be not only a fair price, but one which would induce a more rapid output of gold all over the world, to the great advantage of all concerned. The price, however, is not fixed on any such basis, and, in fact, speculators in exchange in New York seem to have most to do with it. The producers of gold within the Empire throughout the war patriotically handed over their gold to the British authorities at about the par value. To-day the British producer has not quite got a free market, as he has to continue to send his gold here. He receives, however, the premium, which is about equivalent to 40 per cent. above pre-war price.

INCENTIVE TO PRODUCERS.

This set-off against high costs is important, but the producer has no certainty of continuing to receive the present premium, seeing that the price fluctuates more or less according to the condition of exchange between the United States and this country, though only 32 per cent. of the new gold has been sold to that country since August, 1919.

Is such a system of rewarding the gold-miner likely to encourage him to do his best now and to lay his plans for an even bigger production some little time ahead? It obviously is not, and, in fact, the mines that have hitherto lived on a bare margin of profit are beginning to close down. Some think it is only necessary to help the lame ducks so that these may be kept going, but surely increased gold production would best be stimulated by including the more flourishing producers in any scheme to encourage larger output, as it is they who from their richer reserves can bring out gold most rapidly.

PAPER CURRENCY.

The foundation of paper currency is supposed to be an amount of gold backing. In fact, you may say that credit so vital to the world at the moment can be created by confidence plus 10 per cent. of gold. It is difficult to overstate the advantages that would accrue to the community if large additional supplies of the precious metal could be poured into London, and if the credit facilities based on it percolated out through financial circles into industry. A business man would soon be more welcome in a bank parlour. Alternatively, if uncertainty as to the price of gold in the future not only prevents increased supply, but leads to a reduced output, it is difficult to exaggerate the unfortunate effects.

As one more interested in commerce than in mining, it seems to me that it is up to the financial and industrial communities to see that adequate encouragement is given so that the gold-mining industry is assurd of a fair price for the metal for a sufficient time ahead to justify mining directors taking long views.

TAXATION OF THE INDUSTRY.

Is it too much to suggest that the premium should be stabilised at the present rate for gold produced during the next five years, by releasing gold-mining companies from the payment of corporation and income-taxes to the extent that the premium falls below 40 per cent.? In return for this concession, the gold produced should, of course, come to this country. In my humble opinion, such an inducement would give an impetus, not only to immediate production, but would lead to an expansion of the industry, and have a beneficial effect far beyond the five years I have mentioned.

If, apart from the advantages to be obtained by increased production, a further reason for differentiating in taxes in favour of gold mining is required by the Chancellor of the Exchequer, I would add that a gold mine is handing out capital when it pays a dividend, and not a profit earned on an annually-recurring crop.

Ashanti Goldfields at present pays a sum equivalent to 16 per cent. of its profits to the Government as royalty, 30 per cent. in income-tax, and, in addition, corporation tax.

It may be suggested that this plea would come better at a meeting of a company that showed smaller dividends on its nominal capital than this corporation, but I would remind you that the capital upon which the dividend is paid is only a quarter of a million, which just covers their investment, stores, cash, gold in transit, &c.

The actual expenditure on works, buildings, plant and mines development is over £1,500,000, and the dividends divided over these figures would show a very different percentage.

POLICY OF THE COMPANY.

The policy of Ashanti Goldfields for years has been to cautiously write down, and it is with some concern that I have noticed in taxation schemes a tendency to limit the percentage of profit allowed on the capital.

Surely it cannot be intended that capitals that have been prudently kept low are to be penalised, and a premium put on the watering of capital.

I thank you for allowing me to state in popular language the claim that gold mining is not receiving the rewards it deserves to get in return for the exertions made and the risks taken. Human nature being what it is, you cannot get the larger output so essential to this country's prosperity unless you assure payment for results.

In the case of this corporation, what would be less calculated to encourage your managing director, your secretary, your consulting engineer and your staff in Ashanti, who spend their working days fighting and overcoming innumerable natural difficulties to secure that increased output, than the knowledge that all their efforts on behalf of the company may be nullified by conditions entirely beyond their control.

The resolution was carried unanimously, the retiring director, Sir George Lawson Johnston, and the auditors, Messrs Turquand, Youngs and Co., were re-elected, and the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

HARRODS (BUENOS AIRES), LIMITED.

COMPANY'S SOUND POSITION—ARGENTINA'S FINANCE AND TRADE.

The annual general meeting of Harrods (Buenos Aires), Limited, was held, on the 14th instant, at the Assembly Rooms, Harrods Stores, Brompton Road, London. Sir Alfred J. Newton, Bart. (chairman), presided.

Mr R. H. Griffith (director and secretary) read the notice convening the meeting.

The Chairman said he thought they could fairly congratulate themselves that the company had now achieved the position which in 1913 they set out to attain. They had arrived at what the board believed to be a solid and permanent 10 per cent. dividend basis, and he was of opinion that a careful examination of the report and balance-sheet for the year ending August 31st would amply confirm this conclusion. Having regard to the assured position of the company, the directors had in view the distribution, in future, of interim dividends on the preference and ordinary shares instead of holding up the whole of the dividend until the end of the year.

INVESTMENT IN SOUTH AMERICAN STORES.

The outstanding feature of their year had been obtaining control of the business of the South American Stores (Gath and Chaves). The directors, appreciating the undesirability of two British houses competing in the same overseas market, made proposals which, after many conferences and protracted negotiations, secured the results with which the shareholders were acquainted. These

negotiations were conducted without the aid of any intermediaries whatever. The shares given in exchange for the South American Stores shares were issued at premiums amounting to over a quarter of a million sterling. The two companies were not dealing in precisely the same class of merchandise, but trading was tending in that direction, and in various ways it was demonstrated that the position would have been more sharply accentuated as years went on. This fact was clearly brought out as the negotiations proceeded, and had an important influence upon the result.

The South American Stores remained an entirely separate entity. The changes consisted in there being one predominating shareholder in the place of a very large number of smaller shareholders, and the attendant change in the directorate. The original offer of Harrods (Buenos Aires) made early this year was conditional upon the acceptance by the holders of not less than 80 per cent. of each class of shares. It was ratified forthwith by substantially more than 80 per cent., and further acceptances had been made, so that Harrods (Buenos Aires) now held over 94 per cent. of the total number of shares. Since the report and balance-sheet had been circulated further transfers had been received from shareholders who, through various causes, had not been able to avail themselves earlier of the offer.

THE YEAR'S PROFITS.

Having set forth the many advantages of the fusion, present and prospective, he reviewed in detail the leading items of the balance-sheet, going on to say that the net profit for the year, together with the amount brought forward, amounted to £591,816, out of which the directors had allocated £35,000 to writing off the balance of formation and inauguration expenses. They then applied £39,000 to the payment of 6½ per cent. upon the cumulative preference shares, then carried £51,781 to reserve, next paid 10 per cent. dividend to the ordinary shares, then 5s per share upon the deferred shares, and carried forward to the credit of the deferred shares the balance of £13,486. Having reviewed the marked progress of the company during the past three years, he gave some interesting figures relating to Argentina's finance and trade, observing in conclusion that the war had the effect of throwing Argentina on its own resources, consolidating the position it had accrued, compelling the accumulation of wealth by production, enforcing economy in consumption, and curtailing opportunities for the extravagance which unproductive expenditure and inflated credit trading had popularised. The result was that the Argentine Republic was richer as a nation than at any previous time, with a large amount of its foreign indebtedness liquidated, the exports of produce showing every year an excess over imported merchandise, and its commerce financially sound.

Sir Woodman Burbidge, Bart., C.B.E. (managing director), in the course of an interesting review of his recent visit to Argentina, said that all he had to report, following upon the amalgamation, was of a very satisfactory character. He was quite satisfied from all that he had seen that the amalgamation would bring excellent results, not only to the shareholders, but also to their customers, inasmuch as their manufacturing programme would enable them to sell at cheaper prices than hitherto. He thought they could say that they had secured control of the stores trade in South America. Altogether, he was very optimistic as to the future, and was quite satisfied that when the directors met the shareholders next year they would be able to show even a much larger profit than that set forth in the balance-sheet under review.

The report was adopted.

LONDON-AMERICAN MARITIME TRADING COMPANY, LIMITED.

ANOTHER PROSPEROUS YEAR.

The annual general meeting of the shareholders of the London-American Maritime Trading Company, Limited, was held, on the 13th instant, at the Great Eastern Hotel, London, the Earl of Wemyss (chairman of the company) presiding.

The Chairman, in the course of his speech, said: During the past year your directors have continued their policy of taking advantage of the high prices to be obtained for old ships, and have reduced their fleet by selling them. In these circumstances we have, of course, traded with a smaller fleet than we did before. It must be a source of satisfaction to the shareholders, therefore, that, in spite of this, our trading profit shows an increase of £23,000 over that shown last year. It was my duty to call attention last year to the greatly increased cost of working, and I am sorry to say that for the period covered by the accounts there has been a further considerable increase in every detail. Taking it altogether from the beginning, the running charges for insurance, wages, stores, and provisions have increased by 300 per cent., port charges by 200 per cent., repairs by 375-400 per cent., and bunker coals by practically 500 per cent. As the proposed dividend will only absorb £43,000, there will remain a balance of £22,881 3s 7d, and I suggest that £6,700 be written off as depreciation, and that the balance be carried forward. As to provision for taxes, there is a balance of £36,107 14s 8d standing to the credit of reserve for contingencies, and a further £15,000 to the credit of taxes account (included in sundry credit balances), and this your directors considered ample. I might draw your attention to the fact that, whereas last year the company paid away £20,634 5s 8d as interest, this year we have received £4,676 2s 3d under this head.

RESULT OF SIX YEARS' WORKING.

We were formed, as you know, six years ago—just before the war. During that period we have paid in dividends to the ordinary shareholders 109 per cent., so that all the original shareholders have had their investment paid off, plus 9 per cent. In addition to this, we have paid off all our debentures and all our loans; we have paid the preference shareholders, I think, in every year more than their fixed percentage; and I can only tell you that our assets—as you can see for yourselves—are immeasurably higher in value than they were when we first started. It now only remains for me to move:—"That the directors' report and accounts, as presented to this meeting, be and are hereby accepted, and that a dividend of 20 per cent., less tax, be paid on the ordinary shares, and also that a supplementary dividend of 3 per cent., less tax, be paid on the cumulative participating preference shares, that £6,700 be written off as depreciation, and that the balance, £2,881 3s 7d, be carried forward."

Mr S. M. Burtt seconded the resolution, which was carried unanimously.

POST-WAR TRADE POSITION.

On the invitation of the Chairman, Sir Wm. Petersen, K.B.E., then addressed the meeting. He said that when they met last year they had recently emerged from the great war. After the armistice they had all hoped for peace, and for better times generally. He had prophesied at that meeting that they would have a good year, speaking from a commercial point of view, and he was glad to say that so far his prophecy had come true. So far as the future was concerned, he had the very best hopes that they would survive the wave of pessimism through which they were passing. The world had only recently emerged from terrific catastrophes, and they could only expect to be left in a state of uncertainty before matters were cleared up. The Allies had won the war, but they had not yet got peace, and the whole of Europe seemed to be in a state of chaos. In England people were better off than in most other countries, and he had no hesitation in saying that England would survive the shock, because England must of necessity be the great centre of commerce and finance. However, they must first open the channels of commerce, and for that purpose it was necessary to re-establish confidence and to be able to trade regardless of Government control and restrictions.

The proceedings then terminated with a vote of thanks to the chairman and directors.

HAMPTON PROPERTIES, LIMITED.

A PROMISING OUTLOOK.

The annual general meeting of the Hampton Properties, Limited, was held, on the 14th instant, at Edinburgh, Mr W. Work Slater (chairman of the company) presiding.

The Chairman said that the financial position of the company was sound, the available funds amounting to over £51,000, and, in addition, they held fully-paid shares in "Hampton Celebration," the value of which at to-day's price was about £5,000, and cash to be received amounted to about £2,000. The property account had been reduced by the sum of £5,843 18s 10d from the sale of townsites and the amounts received for options.

The sum spent on prospecting and general expenditure in West Australia, together with the expense of management on this side, was moderate. After deducting sundry receipts in Western Australia and Edinburgh, viz., lease rents, interest, &c., the amount was £1,938 13s 8d. The only other reference he thought it necessary to make in connection with the balance-sheet was that the £15,000 contingent liability had been paid off. The company had no debentures or loans of any kind.

With regard to the prospects, there was no golden avenue to success, and nothing but development work under the best possible expert advice would prove availing. This had been the experience of the Golden Mile, which experts considered they had a continuation of in Block 50. They believed that they had something worth working for.

RICH ORE DISCOVERIES.

From the Hampton Celebration, which is right in the centre of Block 50, to their southern boundary—a distance of three miles—an ore channel had been proved, and although the lease immediately to the south of the Celebration had proved so far

disappointing, rich ore had been encountered on at least two other leases on this ore channel. On their Lease 81 they had opened up a chute of ore at the 100 foot level giving values up to 2 ounces of gold to the ton. A winze was being sunk on this ore body, and the prospects were distinctly encouraging, the manager in Australia being hopeful that the company's reserve Lease No. 81 would turn into a mine.

With regard to Block 45, reef had been met with averaging 12 dwts per ton over a width of 60 inches, and the latest cablegram received just prior to the meeting was in the following terms:—

"Freehold Block No. 45 company's alternate lease No.—Hampton Properties, Limited, shaft No. 4. 50 feet level driven crosscut 12 feet west from 2 feet to 12 feet, average value 15½ dwts. Not yet through the reef."

CONFIDENCE IN THE FUTURE.

To show the confidence in the future of the new goldfield entertained by those on the spot, the Chairman stated that some £5,000 had been spent on building and furnishing a hotel in "Celebration City," and everything was being done to meet the wants of the new population and to assist in opening up the property. A water supply had been arranged for, and a pipe line was being laid through Block 50; roads had been constructed and progress made in all directions, and they now had a railway going from end to end of Block 50.

Gold was never more wanted than it is to-day, and the company were hopeful that before long they would be able to assist in augmenting the supply of this precious metal.

Mr Herbert J. Daly—a mining engineer of the highest standing—after having made a thorough examination of the property, had agreed to act as joint managing director in Western Australia, looking after the mining part of the business, while Mr Francis, the other managing director, would attend to the commercial part. Mr Clark, one of the company's directors, was at present in Australia, and had spent some time on the property entirely at his own expense, going over matters very thoroughly, so that his advice would be of greater value than ever to the board.

They were well served by the entire staff. They had Mr Godden, a mining engineer, as mining superintendent. Mr Godden had come to them with the highest credentials, and they were well satisfied with his work.

REASONS FOR OPTIMISM.

While they had not yet reached the goal they expected to reach, they had, he thought, many reasons for congratulating themselves. Some of these were:—

Nearly all over the property gold-bearing ore had been discovered.

They had ample cash resources to carry them through for a long time to come. In the past, when their resources were comparatively trifling, their policy had been to keep a watchful eye on their working capital, and this policy they intended to continue.

He thought from what he had said that they would agree that their prospects were good, and that, with time, that would become more evident.

The report was adopted.

MANAOS HARBOUR, LIMITED.

INCREASED EARNINGS—CAUTIOUS POLICY.

The eighteenth annual general meeting of Manáos Harbour, Limited, was held, on the 13th instant, at 11 Adelphi terrace, Strand, London, Mr George M. Booth (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: In the year under review (to June 30th last) our earnings in milreis were slightly in excess of our earnings a year ago. Owing to the improvement in the Brazilian exchange our sterling account has benefited to the extent of nearly £10,000, with the result that, in the actual twelve months under review, our net sterling gains, after the payment of debenture interest, were approximately £23,000. Had there been any indication that these results might continue your directors would have been in favour of making a payment against our arrears of preference dividend.

Unfortunately our business in the Amazon has once more been heavily hit by the further collapse in the value of rubber, and on top of this the milreis has again fallen to a figure considerably below the average for the last four or five years. The results to date for the year 1920-21 are, therefore, not encouraging, and we feel that it is essential to husband our resources in every way. Your directors have decided to regard the special profit which has come to us through exchange as accruing to the service of our liability in connection with debenture issues. We have appropriated £13,000 for this purpose, and we feel confident that you will not regard this as in any way excessive. Working expenses during the year amounted to 1,070 contos, as compared with 1,155 contos for the previous year, a policy of rigid economy being followed. Maintenance charges for the year under review totalled just on 211½ contos, as compared with 198½ contos, and the sterling charge has naturally been greater with a higher exchange—namely, £13,941, as against £11,120 for the previous year.

Relations between the company and the various authorities in Brazil—Federal, State, and municipal—remain harmonious. We recognise and appreciate the faithful services rendered by our staffs at London and Manáos. I regret having to report the serious illness of Mr Alexander Macfarlane, which developed in June last, and rendered imperative his return to this country for further medical treatment. This has been completely successful, and Mr Macfarlane looks forward to going back to Manáos early in the New Year. In the meantime, Mr Sutton has returned to Brazil to take over the management.

Mr E. H. Tootal seconded the motion, which was unanimously agreed to.

IND, COOPE, AND CO. (1912), LIMITED.

"ANOTHER SUCCESSFUL YEAR."

The eighth ordinary general meeting of Ind, Coope, and Co. (1912), Limited, was held, on the 13th instant, at the Great Eastern Hotel, London, Mr Louis E. Walker (chairman and joint managing director) presiding.

The secretary (Mr E. J. Wallis) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said:—In presenting the statement of accounts I feel that I can congratulate the shareholders in having to record another successful year's working. I can assure them that this result has not been achieved without considerable difficulties. Although the restriction of output had been withdrawn, there still remained among others the limitation on gravity, and in April came the Budget, with a largely increased beer duty of 30s per barrel, bringing the duty per standard barrel up to the high figure of £5.

BALANCE-SHEET ITEMS.

With regard to the balance-sheet, since the last annual meeting the balance of the authorised capital has been issued, amounting to £127,658, being issued at a premium of 5s per share, which premium has been placed to reserve for trade investments. There is an increase in sundry creditors of £133,906, which must be taken in conjunction with the increase of £189,056 in stocks on the credit side of the balance-sheet. This is due principally to the increased cost of materials. The liability for beer duty is also considerably larger, due to the extra charge per barrel and additional output.

Turning to the credit side, the first item—purchase of business, freehold and leasehold properties, &c.—shows an increase on last year's figure of £45,500, principally accounted for by:—(1) The conversion of leaseholds into freeholds, (2) properties purchased, and (3) alterations and improvements to existing houses. The whole of the brewery premises, both at Burton and Romford, are now freehold, whereas at the time the company was formed considerable portions, and some very vital portions, were held under leases. The board realised that in the interests of the company it was imperative to acquire the freeholds thereof on which part of the breweries and maltings stood. The increase of £71,455 in casks, movable plant, &c., is due to the purchase of casks, motor lorries, and bottling plant. On all these items the cost has been very high, but they were essential to the carrying on of the business.

The reduction in the company's holding of Government securities is accounted for by the fact that, owing to the expansion of the business and the large amounts required for the purchase of stocks and other factors, moneys previously invested in short-dated securities have now to be used in the working of the company's business.

With regard to trade investments, there is an increase on last year's figure amounting to £209,150. This is owing to the purchase of the shares in Robinson's Brewery and other investments made to secure trade for the company. This item is subject to the reserve which has been made, including the premium on the new issue of ordinary shares mentioned before.

PROFIT AND LOSS ACCOUNT.

In the profit and loss account depreciation is higher, and is due to the increased purchases at the prevailing high prices—casks, bottling plant, fixed plant, lorries, &c. The shareholders will no doubt appreciate the fact that the board have always seen to it that full and adequate depreciations are made. On the credit side the trading profit is down £75,067. Although the output of

the breweries was better, the increased cost of production referred to already accounted for the smaller profit.

With regard to the three items of reserve in the balance-sheet, your directors have added £50,000 to the special reserve, which they are of opinion is sufficient to cover any claim the Government may have in respect of excess profits duty. The debenture redemption fund has been increased by £10,000, and £25,000 has been added to general reserve, which now totals £125,000.

I should like to say a few words with regard to the purchase of the controlling interest in Robinson's Brewery, Limited. For the year ended September 30, 1920, we only had about five months' experience, and it is too early to say much about the potential advantages to be derived from the purchase of the shares and from the new management, but I can say this, that there appears to be every probability of the acquisition of this interest proving beneficial to the shareholders of this company.

During the year the company has sold a certain number of licensed properties, which—owing in some cases to their geographical situation, and in others to unsuitability to our trade, it was considered desirable to dispose of. On the other hand, we have purchased a certain number of properties nearer to our breweries.

Lieut.-Colonel G. L. Courthope, M.C., M.P., seconded the resolution, which was carried, and the usual formal business terminated the proceedings.

BUKIT KAJANG RUBBER ESTATES, LIMITED.

BOARD'S CAUTIOUS POLICY.

The eleventh annual general meeting of the Bukit Kajang Rubber Estates, Limited, was held, on the 17th inst., at the offices, 7 Martin's lane, London, Mr W. Arthur Addinsell (the chairman) presiding.

Mr J. Lewis, on behalf of the secretaries, Messrs Bright and Galbraith, Limited, having read the notice convening the meeting and the report of the auditors,

The Chairman said in the course of his speech: We meet to-day in circumstances which, to say the least, are not encouraging from the point of view of producers of plantation rubber. I mention this because the accounts which are before you cover a comparatively prosperous period resulting in a net profit for the year ended June 30th last of £40,042, as compared with £21,490 for the preceding year. If it were expedient to deal with the former figure without regard to the conditions prevailing to-day in the rubber market I could well understand the disappointment to shareholders in the recommendation that there should be no further distribution of the profits beyond the interim dividend of 10 per cent., which was declared and paid on July 5th last. In arriving at this decision your directors very carefully considered the financial position of the company in relation to the present outlook, and they fully appreciated the fact that the majority of our shareholders are investors who look for regular dividends as part of their income. If world conditions do not improve shortly more drastic measures will be necessary, and the position is being closely examined from every point of view by the council and sub-committees of the Rubber Growers' Association. I trust therefore that you will agree that the directors are adopting a wise procedure in reserving the cash resources of the company. From the available balance of £35,412 the company will be called upon to pay approximately £7,700 for excess profits duty and corporation profits tax. The actual balance therefore that will be brought into this year's accounts is roughly £29,000, and in the event of conditions improving during the early part of next year the directors will consider the payment of an interim dividend for the financial period ending June 30th next. With regard to the 310 acres which were acquired during the year, your directors considered it essential to take over this land, as it formed a wedge between two of the existing divisions owned by the company, and it was therefore desirable that it should not pass into other hands. No one, of course, can predict what the future has actually in store for us, but —with the general improvement in trade and commerce which is increasingly felt to be assured—rubber, which is universally acknowledged to be an essential commodity, must come into its own again, and I am not without hope that when we meet again the horizon will have cleared and we can look forward to the old days of peace and prosperity.

The report and accounts were unanimously adopted.

S. T. D. MOTORS, LIMITED.

COMPANY'S SOUND FINANCIAL POSITION.

The 15th annual ordinary general meeting of S. T. D. Motors, Ltd. (formerly A. Darracq and Co. (1905), Limited), was held, on the 17th instant, at Winchester House, Old Broad street, London, Mr James Todd, J.P., F.C.A., chairman of the company, presiding.

The secretary (Mr A. A. Yeatman, F.C.A.) read the notice calling the meeting.

The Chairman, in moving the adoption of the report, said: Speaking as a member of a profession whose business it is to be continually examining and criticising balance-sheets, I am confident that I am only voicing the opinion of you all when I claim that our balance-sheet is one which, the more closely it is examined, the more strongly does it show the sound financial position which this company now occupies. The assets of the company on September 30, 1920, as shown by the auditors' accounts, were £3,624,258, less creditors, £54,047, less final dividends, £258,877, as against a subscribed share capital of £2,700,000, and it will be noticed that approximately 15 per cent. of the subscribed capital of the company was in actual cash at our bankers at the end of the financial year. In regard to the Sunbeam Motor Car Company, of Wolverhampton, the facts relating to the recent amalgamation of interests between this company and ourselves are well within your knowledge, but what you will be very gratified to know is that the sanguine expectations which we held at the time of the amalgamation in regard to the value of the same have been more than justified.

The profits of the Sunbeam Motor Car Company have been fully upheld, and they are in a position to be able to carry forward on their balance-sheet a sum of over £90,000, which I may incidentally mention is sufficient to cover the amount necessary to continue the same rate of this dividend in the current year.

I feel that it will interest you to learn as much as possible of the results achieved during the past year by the various undertakings which we now control.

Clement-Talbot, Limited—the entire share capital of which we purchased outright some twelve months ago—have shown results which are extremely satisfactory, and are considerably better than we estimated for, as it has always been our policy to make conservative estimates, but the profit realised on this investment is such that you, as shareholders, have every reason to be fully satisfied with.

With regard to Jonas Woodhead and Sons, Limited, the well-known spring makers of Leeds—another old-established business which we bought outright in the early part of the year—the results again have been extremely satisfactory.

The Darracq Motor Engineering Company is another company which fully upheld their average profits during the past year, and they also are in a position of having a large carry forward, and the same remark applies to Messrs Heenan and Froude, Limited, of Worcester and Manchester, as in each place the profits have been maintained with a satisfactory carry forward.

As already mentioned in the directors' report, the year's results have been achieved despite the conditions created by the moulders' strike and later by the coachbuilders' strike.

The moulders' strike in particular had the most disastrous results on the production of motor-cars in this country. However, by utilising to the full extent our foundries and stamping plant in France, we could make good the shortages in the supplies on this side, and at a later date, by utilising our various body-building resources for the common good, we only suffered to a limited extent from the coachbuilders' strike.

There are other satisfactory features which have resulted from our policy of amalgamation, to which I need not refer at length to-day; but I can assure you that the benefits derived from the close co-operation of our various units are becoming more evident every month.

By centralisation of management and of the buying and selling departments, and a general pooling of resources we have taken a large step forward towards the only possible means of successfully reducing the cost of production.

Whilst I have no desire or intention of making a prophecy, I think I may state with perfect candour that the board of this

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank)

FINLAND.

Head Office: Helsingfors, (Helsinki).

BRANCHES AT 120 PLACES THROUGHOUT FINLAND.

Capital and Reserves about Fmk.238,000,000.

EVERY DESCRIPTION OF BANKING AND EXCHANGE BUSINESS TRANSACTED.

Telegraphic Address: Kansallispankki Helsingfors.

company—whilst realising the extremely difficult period ahead of us—by no means share the pessimism to be met with in so many quarters in regard to the motor industry.

We are of the opinion that by conservative finance we are at least in as good, if not a better, position than any other combination of interests in the industry, either in this country or in any other.

The crisis in the motor industry of to-day is to a very large extent a financial more than a commercial one, in so far as the general scale of taxation existing has to a certain extent reduced the purchasing power of many people. I hope that the New Year will possibly see the beginning of the end of the present undoubted slump. Whatever the future may have in store, the board feel that they have taken every step which foresight and experience teaches them as necessary to best encounter the coming year. As regards the present market price of our shares, the market fall in the value of the shares bears no relation whatever to the condition of our business. The shares are worth, in my opinion, quite as much as they were worth a year ago; but you have only to take up your paper to find that practically every motor-car share has fallen very heavily during the last twelve months, the great majority of them very much more than ours.

The report was unanimously adopted, and the ordinary formal business transacted.

ARNOLD, PERRETT, AND CO., LIMITED.

SATISFACTORY POSITION IN A DIFFICULT YEAR.

The 35th annual ordinary general meeting of Arnold, Perrett and Co., Limited, was held, on the 15th instant, at the Brewery, Wickwar, under the presidency of Mr F. C. im Thurn.

The Chairman, moving the adoption of the report and accounts, said: I think that on the whole the shareholders are to be congratulated upon the year's trading. The balance of profit and loss is £45,812 8s 9d, as against £48,371 18s 2d, a decrease (the amount of which is £2,559 9s 5d) as foreshadowed in our report last year. Provision has been made for Excess Profits Duty, Corporation Tax, and Income-tax. Turning to the net revenue account, the balance to balance-sheet suffers by comparison with last year to the extent of £7,030 5s 7d, which is made up first by the decrease of £2,559 9s 5d above referred to; second, by an increase in interest upon mortgages, &c., of £2,499 4s; and, as to the remainder, by a decrease in interest on investments amounting to £1,975 14s 8d. The proposed appropriation of the available balance is one which, I have no doubt, will commend itself to the shareholders. In view of urgent capital requirements, a very burning matter in these days, we have deemed it wise to make a further substantial addition to the general reserve by increasing it to £45,000, and to increase the reserve for licences to £8,000. The balance to be carried forward will be £9,883 19s 11d, as against £8,489 15s 1d brought forward from last year.

Turning to the credit side of the balance-sheet, the item freehold and leasehold properties, machinery, plant, &c., is increased by £56,271. The next item is stocks on hand, and here again is a very large increase, amounting to £30,967. Sundry debtors are up £3,025, which is entirely due to the increase in prices. I am sure the shareholders will be glad to know that the bad debts for the past year were only £28. Investments are down by £47,762, owing to the sale of part of the War Stock which became necessary in order to provide capital. Cash in hand is also down to the extent of £15,974, and it will be seen by reference to the debit side that we were indebted to our bankers to the extent of £36,597 18s 4d. Cash in the hands of the debenture trustees is a floating balance of moneys received on account of trust properties realised from time to time, chiefly in respect of houses closed by the Compensation Authority. The decrease this year of £5,917 10s is, therefore, simply an accident of these circumstances. The sundry creditors are down by £15,942. The licence insurance fund is increased by £1,000, and the general reserve fund by £10,000 through the appropriations made last year.

The resolution was duly seconded and adopted.

CAPE COPPER COMPANY, LIMITED.

RAKHA HILLS MINE START AFTER LONG DELAY.

The thirty-third ordinary general meeting of the Cape Copper Company, Limited, was held, on the 15th instant, at 9 Queen street place, London, Mr T. Blair Reynolds presiding.

The Chairman said that during the last twelve months the general conditions had not been such as would tend towards recovery. Concerns depending for revenue on a return from new works had doubly suffered, owing to the almost interminable delay in getting machinery and plant. Such had been the position of this company in relation to the Rakha mines, to which alone, during the suspension of operations in Namaqualand, they had to look for revenue. It was owing to delay in delivery of plant and to the generally adverse conditions which had prevailed that the accounts showed the large deficit of £163,627. Hopes that advances obtained from the company's bankers would tide over the period until the increased revenue from the completed plant should begin to retrieve the position had not been fulfilled, and the board made arrangements for the issue of £120,000 of 8 per cent. convertible debentures, to which the shareholders were recently invited to subscribe. At the same time an issue to the bank of £300,000 debentures, without conversion rights, as collateral security was arranged.

In the meantime, it became possible to ship a part of the stocks of copper metal to New York for sale, and the rest of the company's smelting works in India for realisation there, and as a result the loan, which stood in the balance-sheet at £410,137, had been reduced to £353,572. With regard to the future, the directors were informed by cable a week ago of the starting of the plant at Rakha to full capacity, and one could not doubt that from now onward the increased production, and consequently reduced costs, would have a considerable influence on the accounts. The board looked with confidence to the future of Rakha. A study of the method of deposition of the ore led to the conclusion that there should be no impoverishment, but rather a tendency towards an increase of copper contents in depth. With regard to the Cape property, so far as the old mines were concerned, they must simply wait until conditions warranted resuming work.

The report and accounts were unanimously adopted.

VAN RYN GOLD MINES ESTATE, LIMITED.

THE BOARD'S DIVIDEND POLICY.

The twenty-fifth ordinary general meeting of the Van Ryn Gold Mines Estate, Limited, was held, on the 15th inst., at Winchester House, London, Mr L. B. Burns (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The position of the company as at June 30th last compares very favourably with the figures for the preceding period. On a scale of operations which shows an increase of about 8,000 tons milled the revenue from gold at £503,248 shows an increase of just under £100,000. Working costs, on the other hand, continue to show a steady increase, the average being 19s 6d per ton, as against 17s for the previous period, leaving a profit on mining operations of £104,823. We cannot give the mine the credit for this improvement, as it has been brought about entirely by the high price at which we have been able to dispose of our product. In saying this I am referring only to the results which had been obtained up to the end of the financial year, and for all practical purposes the profit obtained from what, for simplicity's sake, may be described as premium on gold accounts for the improved condition of our affairs as revealed in our profit and loss account now in your hands.

The mine has been doing better on its merits during the past few months, as will be seen from recent returns, after taking into account the fluctuations in the gold premium. This has been due to certain improvements in working conditions which have been carried out on the mine, principally in the direction of increasing the percentage of waste rock sorted. This was inaugurated after exhaustive experiments to test the value of the country rock in which the rich leaders are bedded, which has been supposed always to contain gold in sufficient quantities to justify crushing. Modifications in the methods of precipitation of the gold in the extractor boxes have also had beneficial results in respect of the quantity of gold recovered. As regards dividends, we made in June last a final distribution of 7½ per cent., amounting to 15 per cent. for the financial year, as compared with 10 per cent. for 1918-19, and I have the pleasure to announce the declaration of an interim dividend for the first half of the current year of 7½ per cent., free of income-tax. As the premium on gold, which has been largely accountable for the improvement, is such an uncertain factor, and as the labour position is still obscure, uncertain, and not without anxiety, the board deem it prudent to await the results of the full year's working before committing themselves to a rate of declaration which possibly might have to be adversely readjusted. If the satisfactory results now being obtained continue, which we all trust they will, we hope to make a final declaration in June next which will reflect this improvement.

The report was adopted and the usual formal business transacted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, *3 Arundel street, Strand, London, W.C. 2.*

A POLICY IN THE

Scottish Provident Institution,

owing to the very MODERATE RATE OF PREMIUM, is the ideal method of providing for

DEATH DUTIES,

particularly in view of the **Abatement of Income Tax** allowed in respect of PREMIUMS PAID.

Example: Age 40 next Birthday.

The Annual Premium limited to 25 Payments to assure **£2,500**, payable at death, to provide Estate Duty of that amount would be ... £82 7 11
Less rebate of Income Tax (at 3s. per £) ... 12 7 2

Making Net Annual Outlay £70 0 9

MAXIMUM Amount of Premiums payable, **£1,751**
MINIMUM Sum Assured Payable, **£2,500**

HEAD OFFICE: 6 St. Andrew Square, Edinburgh.
LONDON: 3 Lombard St., E.C.3. WEST END: 17 Pall Mall, S.W.1.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920. ‖ Lowered from 3½% to 3% on June 5, 1918, but was raised to 3½% on July 31, 1919, to 3¾% on Oct. 6, 1919, to 4½% on Nov. 6, 1919, and 5½% on April 15, 1920. * Changed from 4½% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

		37,835,906

R. G. JAQUET, Accountant-General.

India Office, December 13, 1920.

Messrs Samuel Montagu and Co. write as follows on December 16th :—

GOLD.

The Bank of England gold reserve against its note issue is £125,022,575, an increase of £948,290 as compared with last week. A fair amount of gold was on offer this week, and was all taken for the U.S.A.

SILVER.

Prices have been somewhat erratic during the week, owing to irregular movements connected with China exchanges. The Continent has sold freely, India considerably, whilst China and America have operated both ways on different days. The undertone continues poor. At the present time the silver market is in a parlous condition—the sport of eddying currents. The reason is that for the moment there is no solid basis for a market. Trade demand the world over is restricted by poor business and by scarcity of money. European coinage is in abeyance, with the sole exception, perhaps, of the United Kingdom, now engaged in replacing the old coins by others of a lower quality. Silver just now is really nothing more than a counter for Eastern exchange, which, both in China and in India, is in the throes of uncertainty, with an inclination downwards.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	Nov. 22, 1920.	Nov. 30, 1920.	Dec. 7, 1920.

§ Approximate receipts.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year ends December 31, Except where Stated.	Outputs. Year 1917.	Year 1918.	Year 1919.	Output Month Nov., 1920.	Increase or Decrease.	Output Eleven Months of 1920, Except Where Otherwise Stated in Brackets.	Increase or Decrease.	Dividends paid in Past 5 Complete Years. 1915.	1916.	1917.	1918.	1919.

(l) Ceylon and Indian Planters.—This represents dividend for half-year to December 31, 1919. (t) India-rubber, Gutta Percha.—This represents interim dividend only. Final dividend deferred owing to present scarcity of cash.

(m) Mann, Egerton, and Co.—Ordinary dividend of 40 per cent. last year took £12,000. This year 20 per cent. absorbs £12,577.

(z) S.T.D. Motors.—Dividend 15 per cent. for year, also bonus of 5 per cent., making 20 per cent. for year. The holders of the new ordinary shares participate in this dividend and bonus as from March 15th to September 30, 1920. The sum of £204,458 also includes a dividend of 7½ per cent. and bonus of 5 per cent. on the ordinary shares exchanged for ordinary shares in Sunbeam Motor Car Comyany.

† Free of income-tax.

Reports and Notices.

Mr Francis Allen, J.P., has joined the board of Aber-Llyn, Limited, and has been appointed chairman. Mr F. C. Goodwin has also joined the board as an additional director. Mr Horace Boot has retired from the board, and has vacated his position as managing director to the company. The registered offices are now situated at 28 Threadneedle street, E.C. 2.

Messrs Ford, Rhodes, and Ford, chartered accountants, 4B Frederick's place, Old Jewry, London, E.C., have taken into partnership Mr C. O. Coton, chartered accountant, as a resident partner in their Bombay firm of Ford, Rhodes, and Parks.

From January 1st next Sir Joseph G. Broodbank, Lieut.-Col. Sir Samuel Hoare, Bart., C.M.G., M.P., Col. Sir Edward Ward, Bart., G.B.E., K.C.B., K.C.V.O., and W. E. Gray, Esq., of the Employers' Liability Assurance Corporation, Limited, have joined the board of the Clerical, Medical, and General Life Assurance Society, and Francis E. J. Smith, Esq., and Arthur D. Besant, Esq., of the Clerical, Medical, and General Life Assurance Society, have been elected to a seat on the general board in London of the Employers' Liability Assurance Corporation, Limited. The following gentlemen have retired from the board of the Clerical, Medical, and General Life Assurance Society:—John Astley Bloxam, Esq., F.R.C.S., Marston C. Buszard, Esq., K.C., Sir Frederick Treves, Bart., G.C.V.O., C.B., F.R.C.S., and Wm. J. H. Whittall, Esq.

Sir Charles Greenway, Bart., has been elected a director of the Scottish American Oil and Transport Company, Limited. Mr T. J. Callaghan and Mr J. S. Hamilton have resigned from the directorate.

Sir Charles Greenway, Bart., and Mr Frederick William Lund have been elected directors of Tankers, Limited, to fill the vacancies caused by the resignations of Messrs T. J. Callaghan and John S. Hamilton.

BANKS.

CORN EXCHANGE BANK (NEW YORK).—The board recommends that capital stock of the Corn Exchange Bank be increased to $7,500,000, divided into 75,000 shares of the par value of $100. It is deemed most advisable for the interests of the bank that, upon said increase being authorised, the additional stock be issued and disposed of as follows:—15,000 shares of increased stock shall be offered to stockholders of record at close of business on December 28, 1920, at $100 per share, being at the rate of 25 per cent. of their holdings; that such stockholders, or their assigns who shall subscribe, shall deposit their subscription blanks and pay their subscriptions on or before February 3, 1921, for which temporary receipts shall be issued, and that such temporary receipts shall be exchangeable for stock certificates on February 7, 1921, on which date said stock certificates shall be issued to the subscribers.

LONDON AND RIVER PLATE BANK.—The report for the year ended September 30, 1920, states that the balance available, after making ample allowance for bad and doubtful debts, income-tax, and £140,033 rebate of interest on bills not due, amounts to £854,140, including £319,325 brought forward. The directors recommend a dividend of 9 per cent., less tax, making 15 per cent. for the year, bonus to staff, £60,000, provision for corporation tax, depreciation of securities, and other contingencies, £170,000, carrying forward £318,140.

NATIONAL BANK OF SCOTLAND.—The net profits for the year ended November 1, 1920, after providing for bad and doubtful debts, were £295,310, making, with £167,093 brought forward, less £100,000 since added to paid-up capital stock, a total of £362,403. The following allocations were made: dividend at rate of 16 per cent. per annum, less tax, to heritable property account, £10,000; to officers' pension fund, £15,000; to investment reserve, £150,000; carrying forward £64,203.

MISCELLANEOUS.

D. NAPIER AND SONS.—The report for the year to September 30, 1920, shows a loss, after charging depreciation, interest on debenture stock, income-tax, directors' and trustees' fees and loss on War bonds sold, of £59,540, less balance brought forward £9,966, leaving a debit balance to be carried forward of £49,574. Preference share dividends paid December, 1919, and June, 1920, amounting to £22,500, have been appropriated from general reserve, reducing that reserve to £122,500.

JOSHUA HOYLE AND SONS.—At the annual meeting of shareholders of Messrs Joshua Hoyle and Sons, Limited, the well-known Lancashire cotton manufacturers, held at the end of November, it was stated that certain negotiations were pending which would mean a further and very important extension of the firm's activities. It is now announced that the Ross Spinning Company, Bacup, which owns about 75,000 mule and ring spindles, has been taken over by Messrs Joshua Hoyle and Sons, Limited. The company has been bought from the Dunlop Rubber Company, and it is understood that that concern is now concentrating all its productions at the mills at Rochdale. It may be said that Messrs Hoyles now have a controlling interest in mills working about 375,000 mule and ring spindles and 9,330 looms.

WATERLOW AND SONS.—The report for the year ended September 30, 1920, states that the amalgamation with Waterlow Brothers and Layton has been carried out. After making provision for bad and doubtful debts, excess profits duty, and corporation tax, and allowing depreciation of machinery, net profit is £228,823 (of this £41,116 is derived from rents and investments, leaving trading profit £187,707), and £32,887 is brought forward, making £261,710. The directors recommend final dividend of 10 per cent. on deferred ordinary shares, making 12½ per cent. for the year, placing £60,000 to reserve, raising it to £340,000, and carrying forward £58,760.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Cold and wintry weather has prevailed over the United Kingdom during the past week, but heavy falls of snow afforded some protection to the young wheat plant against severe frosts. All field work was suspended, and it is fortunate that agriculture operations are so well forward. Further reports indicate a larger area under wheat. Offerings of native wheat at the chief distributing centres continue on a liberal scale, but experienced a generally slow demand, and rates tend in a downward direction, sound milling qualities failing to attract buyers at 85s per qr of 504 lbs. Imported descriptions are also quiet of sale, with only moderate supplies on offer, while official prices were reduced 7s 6d per qr of 480 lbs, in view of the corresponding decline on c.i.f. terms. Crop prospects in Australia and Argentina are less favourable owing to adverse weather for harvesting, and a reduction on previous estimates of the exportable surplus is mentioned. Reports from the U.S.A., however, show a substantial increase of wheat, barley and maize, but a decrease in the case of rye. The flour trade remains very dull, as bakers are awaiting a reduction in price of G.R. grade, following the decline in the raw article. So far no change has been announced, and 82s per sack, ex mill, is still quoted, with 76s 9d to 89s per 280 lbs, ex store, for imported descriptions. Shipments from North America of late show a slight increase, but most of the additional quantity was on Continental account. Maize opened firm, but later a quieter tone set in owing to forward weakness. Plate, ex ship, 57s 6d, ditto, landed, 59s-59s 6d, white flat African 61s, American white, ex ship, 62s per 480 lbs. On c.i.f. terms cargoes continue to meet with poor support, and prices, after ruling firm, moved in a downward direction in view of the favourable report of the United States Bureau. Cargoes of La Plata, about loading, sold 56s 6d; ditto, expected loading, 55s 6d (Continent), Dan-Gal-Foxanian, December 1st bill of lading, 57s 3d; and a part cargo of Bessarabian due at 56s 6d per 480 lbs. Parcels easier, and Plate, January-February, sold from 53s 3d to 47s. Barley generally quiet, but native descriptions less freely offered. English malting ranges from 55s to 100s, and grinding descriptions 50s to 60s; Californian, ex ship, 75s to 90s; Australian, 85s to 95s per 448 lbs. Canada feed, ex ship, 52s 6d, American malting, landed, 63s per 400 lbs. On c.i.f. terms sales resulted in No. 4 Canada Western, December, at 55s to 55s 6d, and a part cargo Bessarabian, due, 56s 6d per 400 lbs. Oats quiet, and values easier, with ample supplies on offer. English new whites quoted 48s to 54s; black, 46s to 50s per 336 lbs. Of imported Plate ruled at 44s to 44s 6d; No. 2, Canada Western (new), 47s; black Irish, 45s 6d; and Norwegian, 59s landed per 320 lbs. Forward dealings were limited to new crop Plate, f.a.q., January-February, from 34s 9d to 32s. Beans inactive, English new winters 65s to 70s per 532 lbs. Peas slow, English Dunns 70s to 75s, Maples 85s to 105s, small blues 85s to 100s per 504 lbs. Oatmeal dull of sale. English remains unaltered, but Scottish and American rather easier. Lentils ruled quiet at recent level. Homeward freight markets are generally depressed, and with liberal tonnage offers rates still tend easier in most directions. From the River Plate maize was placed at 40s, up river loading, to U.K./Continent, and a steamer, January-February, at 50s heavy grain, while clipped oats, Bahia Blanca to U.K., January, paid 50s, and February 52s 6d, with 5s per ton extra in each case for unclipped sorts. North America quiet. Range ports to U.K./Antwerp, established 8s to 7s 6d per qr and 10s 6d Mediterranean, Gulf to West Italy, 11s 6d per qr, North Pacific to U.K./Continent, December-January, 95s to 90s per ton. India quiet, and tendency lower. Bombay on dead weight indicates 47s 6d, and Karachi scale basis paid 40s for wheat to U.K./Continent. Australia easier at 90s to 95s as to position. From the Danube 40s was taken for a steamer two up-river ports to Antwerp-Rottendam, prompt loading. No charters were reported from South Africa.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.—(Particulars of imports of wheat and flour temporarily discontinued):—

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

THE IRON AND COAL TRADES.

Our Glasgow correspondent (writing on Thursday) says:—Conditions in the iron and steel trades continue somewhat mixed, with the balance of tone rather pessimistic. Taken all round, there is a large volume of producing and manufacturing trade in progress, and in many important branches not only is full time in force, but extra night shifts are found to be a necessity—this applying mainly to departments associated with engineering. But, on the other hand, running-out contracts are not being generally replaced, and as a consequence working squads are here and there being reduced. It is no secret that for a few months past finishing departments in steel have been holding back from buying material (so far as they could), and the belief is that a very large accumulation of hung-up business is the outcome. Those interested are playing for a lower level of prices. Up to date the policy has had a certain measure of success, and the problem is how long it can be maintained. Black sheet makers, whose market has gone badly off of late, have again revised their list prices, making the third for the year, and bringing the "cuts" from the highest point this season up to £9 10s fully a ton, at:—For $\frac{3}{16}$ to $\frac{1}{4}$ inch, £28 10s; $\frac{3}{16}$ to $\frac{1}{8}$, £29; under $\frac{1}{8}$ to 12 gauge, £29 5s; 12 to 16, £29 10s; 16 to 20, £29 10s; 20 to 24, £30; 24 to 27, £32—all delivered Glasgow. There are still very large quantities of bars, bloms, scrap, &c., being landed at East and West Coast ports from Belgium, at sensibly lower figures than rule here. Several important contracts for steamers and dredging plant (for India) have been secured since Monday by Port Glasgow and Renfrew builders. In the last day or two some half-dozen hematite furnaces have been blown-in near Glasgow. Prices for pig-iron exceptionally firm. Supplies of coal larger than they have been throughout the year before; but Continental shipments are poor, owing to American competition.

Our Middlesbro' correspondent's report, dated December 16th, is as follows:—Pig-iron: Foundry pig-iron still very scarce, but forge is plentiful. Restrictions on export of foundry iron are relaxed, but there is none available for export, and even if the iron were available, it is doubtful whether orders could now be secured

ALEXANDERS DISCOUNT Co., Ltd.

on present price basis. East Coast hematite pig-iron is more plentiful. Prices unchanged at 225s for No. 3 and No. 4 foundry, and 260s per ton for East Coast mixed numbers hematite. Manufactured iron and steel: Prices have not been "cut" so far this week, but it is anticipated that a reduction cannot long be delayed. Steel ship-plates (home), £24 10s; steel ship angles, £24; iron bars, £27 10s; steel rails, £25 net. Iron ore: The iron ore trade is very dull; a further fall in freights seems to be generally expected. At present the rate from Bilbao to East Coast is about the parity of 17s, and best Rubio is quoted nominally about 50s per ton.

Our Sheffield correspondent writes:—Further cuts in steel and iron prices have occurred this week, some in the lower grades of quality being drastic in character. For instance, soft wire rods are down £6 per ton, following one of 50s a month ago. The first reduction in acid open-hearth steel is announced, the drop being £2 on billets and varying amounts on rolled material. There are also reductions in bar iron (£2), foundry and forge pig, tungsten, and certain raw materials, which are benefiting by the decreased freight rates. The downward movement has not yet stimulated buying, as consumers have yet to be satisfied that something like the bottom of it has been reached. The trade position is worse than ever. No one can recall a period of such meagre buying, and the wholesale cancellations of contracts with overseas markets is without parallel. The further fall in the currencies of allied countries is creating the greatest anxiety, as it is realised that trade cannot recover to any considerable extent until the exchanges move towards normal. Cancellations have practically bared the order books of many firms, large and small. The Christmas holiday will be longer than usual, as the majority of firms have little or nothing in hand with which to start the New Year. It is generally recognised that the next few weeks will be a critical time. Very little optimism is now to be found in trade circles. The market for industrial fuels is developing signs of weakness, and there would be a surplus output but for the extra supplies which are being taken to cover the holiday stoppage at the pits. Colliery owners are now pressing for the withdrawal of the restriction on exports. The demand for house coal, on the contrary, has been stiffened by the cold snap. Current quotations per ton at the pits are as follows:—Best South Yorkshire hards, 33s 2d to 33s 8d; ditto Derbyshire, 32s 8d to 33s 2d; best Tyne steams, 36s; steam cobbles, 31s 8d to 32s 2d; branch, 37s 2d to 37s 8d; Silkstone, 33s 8d to 34s 8d.

MANCHESTER, December 16.

We continue to experience a very slack market. Business has again been confined to odd lots. Spinners and manufacturers are curtailing production on a large scale, but difficulty is experienced in preventing further loss of ground. In cloth for China a little more inquiry has been about, but dealers on the other side are not yet ready to buy. Offers for India have been few and far between, but the downward movement in exchange rates has now been checked. Occasional lines have been booked for Java. No activity has been met with for Egypt and the Levant. Occasional instances have been mentioned of manufacturers slaughtering stocks by accepting wretched prices. American yarns for home use have been rather steadier in quotation, and the big restriction of output is having some effect upon the situation; but manufacturers are not disposed to buy twist and weft until more cloth orders come along. Demand has been about in bundles for India and the Levant. Egyptian spinnings remain slow and irregular.

COTTON INDEX FIGURE.

According to the trade circular published by Mr Frederick W. Tattersall, of Manchester, the index figure for raw cotton, yarn, and cloth is now 268, as compared with 346 a month ago. Since the middle of November American cotton has declined from 241 to 194, American yarn from 359 to 287, cloth from 322 to 266, Egyptian cotton from 471 to 329, and Egyptian yarn from 338 to 265. The index calculation is based upon the figure of 100 for July 31, 1914.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is no expansion in business in the wool textile industry; indeed, the tendency is for trade to become still more restricted. Employers are experiencing difficulty in finding even 24 hours' work in the week for their employees, and the amount of idle machinery is increasing. From whatever point of view the matter is regarded, it is obvious that during the next few weeks the operatives will have to face a very hard time on account of lack of employment. There is practically no new business coming through in piece goods, and this naturally reacts adversely on all the other branches of the industry. Quotations for tops and yarns are largely nominal, but average 64's tops can be bought in any quantity at 4s per lb for immediate delivery. It is significant, however, that wool cannot be bought either in London or in the colonies to make tops at that price. For 2-48's yarn out of 64's tops a general quotation is about 6s 0d per lb, but odd lots can be picked up at lower prices. Practically all home-grown wools are neglected at the moment. There is a little trade passing in some of the low qualities, such as black-faced and Herdwick, but prices are very low, and disappointing to the growers. The mohair and alpaca trade is inactive.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales have been continued this week without any improvement in the course of values, and in accordance with a decision made last week-end to curtail them, they closed yesterday (Friday). Under ordinary circumstances, the cancellation of the Liverpool and Hull wool sales, and the fact that no sales will be held in Australia in January, except one in Tasmania, would have compelled the trade to pay higher prices for the raw material than those recently current; but business in manufacturing centres will have to improve considerably before there can be any improvement in the demand for wool, even at current prices. Higher values seem to be altogether out of the question, no matter what attempts may be made to force the pace. It is evident from the cancellation of wool sales that, apart from London, there will be no market in which Colonial wool can be bought in January. It almost looks as if it had been decided to cease offering wool until some recovery takes place. No doubt the proposal emanating from Australia to form a British-Australian Wool Realisation Association will receive very careful consideration by the British Cabinet and the most experienced advisers in the trade, but users are unanimously of the opinion that it will only postpone the evil day if an agreement is entered into by the British Government to hand over surplus stocks of wool. There may be some reason for saying that even the British Government authorities are of the opinion that the members of the wool trade are deliberately "bearing" the market, but I do not believe that anything of the kind is being done. Prices have fallen under the influence of adverse circumstances, and tremendous losses are having to be borne. When parcels of textiles goods which cost £600 are being sold at less than £200, and when yarns are being offered at 6s per lb which cost 14s in the top, it is obvious that values are coming down to a level which, comparatively speaking, is extremely low, and that in the process large sums of money are being lost. Such circumstances as these can only be regarded as the natural rebound from an extreme point. A reduction in the price of manufactured goods, and a clearance of present stocks, will have to take place before trade can open out in cloths and hosiery goods. There is general concern about the future of the industry. It is only putting it mildly to say that the outlook is most unsatisfactory, and the present is undoubtedly a time for sober reflection and when all firms should act with caution.

With regard to the demand for the raw material, the position is very closely identified with that of the call for manufactured goods. Drastic reductions in prices, such as have been mentioned above, do not result in any weight of stock being moved, and until these stocks can be liquidated it is impossible for wool to flow freely into consumptive channels. It is beyond question that the labour situation lies very largely at the root of the present trouble in the wool textile industry. Manipulation costs have advanced tremendously compared with before the war, and working hours have also been reduced.

THE TIMBER TRADE.

(BY OUR CORRESPONDENT.)

The auction sales of imported softwood timber held a few days ago at Winchester House confirmed the fears held by the bulk of the trade for the past month—the demand was slow and prices dropped generally, particularly in the lower qualities of Swedish and Finnish deals and battens, and in Swedish and Norwegian floorings. Canadian spruce, which has been a bad market for some months past, also shared in the decline. Under prevailing conditions, consumers should find a drop of an average of £5 a standard for spot values, if the results of the auction are to be taken as a reflex of the market. It would be wise, however, for buyers of timber not to take too seriously the sensational paragraphs referring to the timber trade that have appeared lately in the lay Press, which contained some facts but omitted others. We all require cheaper timber for house building and other construction work, and this condition of affairs is now likely of attainment owing to the overstocked market and the dull demand. But one must not lose sight of the fact that all costs of production in timber shipping countries are appreciably higher than before the war—in trees, logging operations, transport, and labour generally—and though consumers for a little time will reap the benefit of cheaper wood material thanks to the financial needs of foreign countries (at a cost to timber importers, who have to compete with the heavy cargoes that have been sent over on consignment), they must be prepared to do business at business rates when the market is more settled. Whether prices have yet touched bottom it is difficult to say, but the fall should stimulate the demand and assist in reducing a too heavy stock and probably giving, as many importers contend will be the case, a general stiffening of values in early spring.

As regards the spot prices for building timbers for next season, shippers' quotations have yet to be decided, few f.o.w. transactions having taken place from which one can get a view. On the one hand, it may be stated that Russia might again enter the market, and other timber-producing countries which have been able to send us only moderate (but very effective!) quantities this year will greatly extend their operations, and we shall thus obtain additional supplies and assist in bringing Swedish shippers' ideas down. That there is an abundance of trees in the world is shown in the article on "The Sources of Our Supplies of Wood and Timber" in the *Economist* of December 11th; but the main point at issue is whether these forests—for instance, in Siberia—can be exploited to compete with Swedish and Russian timber from forest areas adjoining rivers and good ports, and mills equipped with modern plants for the rapid conversion and transport of logs.

On the other hand, it is believed that instead of this market being the only one of importance to sellers, as has been the case this year, France, Germany, Holland, and Belgium will be keen competitors against us, and will all have their influence on the firmness of shippers' prices. Providing the European countries do not go backward there should be a push in reconstruction work and manufacture generally in 1921, with a much larger consumption of timber.

The teak market has been dull over the month. Reduced quotations have enabled holders to make some progress with their moderate stocks of planks and conversions. The fact that the Dutch Government has prohibited the further export of teak from Java should have a beneficial effect on spot prices.

Mahogany, both for logs and lumber, is firm in price generally, though there are some ill-conditioned logs on the market that are difficult to get rid of. American lumber for the cheaper classes of furniture are in little demand, and importers are not in the market owing to the unsatisfactory consumption.

For native timber, good oak and ash are fetching only moderate prices; other descriptions are finding a slow market.

OILSEEDS AND VEGETABLE OILS.

(FROM OUR CORRESPONDENT.)

Oilseeds and their products continue to reflect the general stagnation in trade and commerce. The demand for linseed oil is extremely poor, and although there was a slight revival on some Continental buying at Hull, it soon faded away, and values now are only slightly above the lowest recorded since 1916, the raw oil ex Hull mill standing at no more than £42 10s for spot and all positions to April. In view of the fact that the average value of Indian linseed imported in November was £36 11s per ton, and that of Plate £31 10s 9d per ton, the present figure barely represents the intrinsic value of the oil product. Crushers are, however, buying very sparingly, and only against forward sales of oil, the result of the diminished consumption being seen in the still falling prices for linseed, Plate for shipment being quoted earlier in the week at £22 and Calcutta at £24. Hopes of a resumption of activity in the New Year are but slender, and turn entirely upon the trend of industry generally and the improvement of the conditions now governing trade with the Continent.

A fair demand for cotton oils by the soap and margarine manufacturers has been experienced, but this has slowed down somewhat, and, in sympathy with seed, values are 20s to 40s per ton lower on the week. Most other vegetable oils are quiet, and scarcely maintain late quotations.

The imports of oilseeds, oilnuts, &c., into the United Kingdom in November aggregated 137,150 tons, as compared with 165,671 tons in the same month last year—a decrease of 28,521 tons, but nearly 8,000 tons more than in October. In the eleven months (January-November), the U.K. imports totalled 1,263,545 tons, against 1,466,967 tons in the corresponding period of last year, the falling-off of 203,422 tons being entirely under the head of oilseeds, principally linseed. Oilnuts and kernels were a slight increase upon 1919.

Linseed cakes are in very poor demand. Cotton cakes are more inquired for by dairy farmers.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Hide prices have not yet touched bottom, as all classes again fell at Thursday's Bermondsey auctions. Best ox dropped to 6¼d-7⅛d, showing a further fall of ⅜d-1d, as against last week. Horse hides fell 3s each, and calf showed a decline of ½d-1d per lb. Wools were fairly steady, and brought from 3s 6d to 8s 8d each. The foreign hide trade remains quiet, tanners only buying a few bargain lots. Nothing can yet be done with the Continent owing to exchange difficulties. Frigorifics are easier, spot Sansinenas are offered at 12d c.i.f., and Smithfields at 11d. Cables this week report the American market as depressed, with best heavy steer hides down to 18 cents. Horse hides are now selling in the U.S.A. in best selections at five dollars.

There is still little trading in sole leather, although the severe

THE BANK OF TAIWAN, LIMITED.

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Foochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue its own notes in Formosa, conducts general Banking Exchange Business, undertakes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox & Co. (France) Ltd. Deposits are received for fixed periods on terms which may be ascertained on application.

weather had led to a slight demand for repairing bends. Factors are full up with leather, and tanners now take any bid within reason to clear stocks before the end of the year. There is really no fixed standard of values, and none can be expected until the raw hide market finds its level. Offal is selling well under the cost of production, and good English pinned bellies have been sold in Bermondsey at 8½d, and wet salted are now offered as low as 7½d.

Upper leather is a dead letter, and what sales have been made have been at a low figure to liquidate stocks. Glacé kid is badly under a cloud, the forced selling of the banks having quite demoralised the position. English chrome tanners are all working short time, and one large concern has, I hear, decided to shut down for a year rather than run at a loss.

Shoe manufacturers are badly off for orders, but here and there one comes across firms who have enough work in hand to carry on. Several Midland firms are making a cheap Army boot for the Continent, and this has helped matters out a little. Shoe manufacturers are rather angry that retailers do not face the position, and give the public the advantage of the bargains they are obtaining from the makers at the present time.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, December 17.

A quiet and featureless state of affairs again predominated in most directions, as, apart from the consideration of financial stringency, buyers confine their operations to wants of pressing necessity in view of the near approach of Christmastide. In some markets so little interest was shown as to render quotations more or less nominal, while in others weakness ensued, though there was no undue pressure to sell.

SUGAR.—Market dull for free parcels with actual transactions during the week, quite retail in extent. Some crystallised West India, sold, 68s to 71s; white Mauritius, 79s; American granulated, 80s.

COFFEE.—The home trade continue to secure a few suitable parcels, but export demand is very dull, and the market at the moment is quite featureless. In auction, fair to good Nairobi, sold, 92s to 106s; peas, 86s 6d to 100s. Uganda bold, 83s 6d to 84s 6d. East African brown, 47s. Future delivery quiet, at easier rates. May, sold, 49s 6d; July, 50s.

COCOA.—Market dull both on spot and for forward parcels. Good to fine Grenada, spot, 58s to 60s; Trinidad, 80s to 82s; Accra F/F quality, December-February, sold, 42s, ex quay, Liverpool.

TEA.—During the week 39,200 packages Indian and 21,700 packages Ceylon were brought to auction, and while all the finer liquoring descriptions met a good demand at full recent rates, medium and common engaged rather more support at recent level of prices.

RICE.—Market very quiet, and without new feature. Rangoon bran dull, and parcels to arrive quoted £7 per ton. Beans quiet. Spot, 11s 6d.

SPICE.—Pepper received moderate attention, but some irregularity was discernible with regard to forward positions. Fair black Singapore, spot, sold, 4d; ditto, January-March, 4d to 4¼d, 3⅞d, and 4d. Lampong, spot, sellers, 4d; Aleppy, spot, 4¼d; Tellicherry, 4⅜d; white Singapore, 8½d; Muntok, 9d; ditto, January-March, 8d to 7⅞d and 8¼d. Zanzibar cloves, spot, 1s 3d. Pimento, spot, 3⅝d. Flake tapioca, spot, fair, sold, 1¾d; ditto, January-March, steamer, London, per cwt, at 17s 6d; fair Penang seed pearl, spot, 21s 6d. Small sago, spot, 25s; sago flour, spot, 20s; January-March, 15s 6d. Japanese farina, spot, 26s 6d; January-March, 22s 6d. Desiccated coconut, fine cut, spot, sellers, 60s; and medium, 65s.

JUTE.—A very dull condition of affairs again governed this market, as demand for various manufactured goods shows no recovery. Native first marks actuals, December-January, steamer, sellers, £39; subs, £33; Daisee No. 2 actuals, £36; lightning actuals, £27; and subs, £25. Calcutta hessians flat. 10 oz, spot, 30s; 8 oz, ditto, 26s 6d. A twills, spot, 85s; B, ditto, 75s.

HEMP.—Manila rather unsettled and easy, with only a quiet trade in force. J grade, December-February, quoted, £56; January-March, £55; K, December-February, £47 10s, £47 paid; L, £46 10s; and M, £37 10s. New Zealand quiet. Fair, October-December, £50 10s. Italian quite neglected, and market nominal.

SHELLAC very quiet, and forward positions unsettled. Standard T.N., spot, 400s; off quality, 360s; March delivery, sold, 290s to 315s and 280s.

COPRA dull, and rates weakened as sellers were more prominent. F.M.S. Straits, December-February, to London, sold, £46 to £41 10s; ditto, to Rotterdam, £46 10s to £42. Ceylon nominal. Palm kernels, December-February, sold, £30 to £26 10s.

MENTHOL.—Kobayshi and or Suzuki, spot, sold, £26. Peppermint oil, ditto, 16s 6d; aniseed, sold, 2s 9d; cassia, 6s, 4½d; slab camphor, 5s 3d; China, crude, 2s 6d per lb. Japan wax, spot, 117s 6d; Carnauba, 160s to 165s.

EGG PRODUCTS.—The market remained in a dull state, with quotations more or less nominal. Liquid yolk, spot, old season's 60s; new, 85s; liquid whole egg, spot, 60s per cwt. Dried native whole egg, spot, 8d; spray, 1s 3d; dried yolk, spot, 6d; hen albumen, spot, 4s per lb.

FRUIT (dried).—The market for currants proved extremely dull, and rates nominal during the week. Valencia raisins firm, and in limited supply. Half-boxes, sold, 134s to 137s; quarters, 138s to 142s. Sultanas quiet. Smyrna, spot, 130s up to 158s. Dates quiet. Siar, ex wharf, sold, 36s.

RUBBER.—Market continued in a very quiet state, and rates tended weaker. Plantation crepe, spot, sold, 1s 0¼d to 11½d; December, 1s 0¼d to 11⅜d; January-March, 1s 0⅜d to 1s; April-June, 1s 2d to 1s 1¼d; smoked ribbed sheet, spot, sold, 11¼d to 10¾d; January-March, 11⅜d to 11d; April-June, 1s 1d to 1s 0½d. Fine hard Para, spot, 1s 1¼d; soft fine, 1s 0½d; ball, 1s.

OILS.—Linseed easier. Spot, net, naked, 43s 6d; January-April, 41s 6d. Rape quiet. Crude, spot, 72s; refined barrels, 82s. Cotton dull. Crude Egyptian, 45s; Bombay, nominal; common edible, 56s. China wood easier. Hankow, spot (barrels), 90s; and Hong Kong, spot, 90s. Coconut quiet. Ceylon, spot, 74s; November-January, 72s; Cochin, ditto, 76s. Soya quiet. Oriental, afloat, cases, 44s; barrels, 48s. Japan fish quiet. November-December (cases), 34s. Cod liver quiet. English, spot, 34s. Groundnut quiet. English crushed, naked, spot, 55s; deodorised (barrels), 78s. Turpentine quiet. American, spot 100s; December, 100s; January-April, 100s. Rosin quiet. American, grade B, 39s; F, 40s; G, 40s 6d; K, 41s; M, 41s 6d; WW, 42s; French, F/G, 39s; H, 40s; WW, 42s; extra pale, 43s. Petroleum steady. American, spot, 2s 3½d; and waterwhite, 2s 4½d per gallon.

OILSEEDS.—Linseed: Market easier. Calcutta, December-January, nominally £23 10s. Bombay, December-January, £24 10s. Plate, afloat, Hull, sold, £21 to £20; November-December, £21 to £20 15s; January-February, new crop, sold, £22 to £21 10s. Rapeseed lower. Toria, November-December, sellers, £24 10s; real bold Ferozepore, £23 10s; brown Cawnpore, £21 10s. Cottonseed quiet. Egyptian, black, December, £14 10s. Bombay, spot, Hull, £9 10s old, £10 new; December, £10. Gingelly easier. Chinese, November-January, to Continent, £29. Ground nuts declined sharply. Coromandel, January-February, machine-dried, £20 10s paid per ton.

METALS.—Tin continued an easier market until last Tuesday on free selling, cash being finally registered at £212, while three months' after moving down to £210, rallied to £216. The tendency hardened during the middle of the week, values, however, being below the best, cash being done at £218 to £217, and since at £217 10s; three months', £223 down to £219 10s, and ultimately at £220 10s. The market relapsed on Thursday, cash being registered at £216 10s to £215, early February, £217 10s, and three months' down to £218. At Friday's session, values again eased, cash fluctuating to £210 10s, late January to £213, and three months' £215. English ingots, £208 to £209. Copper; The standard market declined early in the week, when cash by Tuesday was selling at £75 15s; three months', £75 to £75 10s. Little change occurred until Thursday, with late December realising £75 5s, and three months', £75 10s to £75 5s. At Friday's session, cash relapsed to £74 10s, and three months' to £74 5s. Electros, £87 to £88; best selected, £84 to £85; strong sheets, £136. Lead lower at £22 5s to £24, according to position. Spelter easier at £25 5s to £27 5s. Antimony regular. English, on spot, best, £48. Aluminium: Home trade, £160; export, £180. Wire bars, £86 to £88.

TALLOW.—Messrs Colchesters and Woolner write on December 15th as follows:—The tallow market was steady during the week, and prices were mostly unchanged to-day. There will be auctions on Tuesday next. Shipments from Australasia in November, amounted to 3,800 tons. At auction to-day 1,040 casks tallow were offered, and 408 were sold. Quotations are:—Australian mutton: Fine, 58s 6d; good to fair, 58s to 54s; dull to dark, 50s to 42s; hard, 58s. Australian beef: Fine, 60s; good to fair, 58s to 50s; dull to dark, 45s to 42s; sweet, 70s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 55s; and mixed, 43½, c.i.f., London, 53s. The market letter is unchanged. Town tallow, 50s per cwt. Rough fat, per 8 lbs, 7d; melted stuff, 35s per cwt. Quotations are:—Town: 43s net cash, naked, ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 45s to 40s. Bone fat: White, none; pale, 43s; benzine, 40s; melted stuff, 39s, f.o.b.

VICTORY ATLAS

OF THE WORLD

THE VICTORY ATLAS is essential in the office. The merchant and manufacturer must know where the new States lie, and how they can be reached by sea and land. He must familiarise himself with the new countries where new Governments and new tariffs have been set up, and new coinages and weights and measures introduced, or he will be left behind in the struggle for their markets. These new countries are shown on larger scales and in greater detail than in any other atlas in existence, and in the Victory Atlas the business man can pick out the routes and distances by sea to their ports, or he can trace out the land routes to States without a seaboard. The economic inset maps will show him where raw materials such as iron, lead, rubber, wool, silk, &c., are obtainable, and the charts of the oceans, with their steamship routes and distances, will enable him to estimate the cost and time required to bring these products into the home market.

The Victory Atlas is published in three styles of binding: Cloth, with handsome gilt lettering, £7 5s.: half-morocco, with handsome gilt design and lettering, £8 15s.: full morocco, with handsome gilt design and lettering, £10 10s.

The form of binding used for the Victory Atlas is the "guard" system, which ensures every map lying absolutely flat when the Atlas is opened, and no name or detail of any kind can be obliterated from the centre. This fact alone should commend itself to many purchasers.

For the convenience of those who prefer to have the maps bound in such a way that they can be taken out and consulted separately, the Atlas is also published in a loose-leaf binding case.

As none of the maps contained in *The Daily Telegraph* Victory Atlas can be purchased at less than 2s. a copy, and considering that there are 150 full-plate maps in the Atlas, and that the cheapest form of binding costs 39s., the advantage of purchasing the complete volume is obvious.

THE BRITISH OVERSEAS BANK, LIMITED.

Established 1919.

Report presented to the First Annual General Meeting of Shareholders held in the Cannon Street Hotel, London, E.C., on FRIDAY, 17th December, 1920.

The GOVERNING COUNCIL submits to the Shareholders the Balance-sheet of the Bank, as at 31st October, 1920, together with copy of the Auditors' Certificate.

The Profit for the period ending 31st October, 1920, after allowing for rebate of interest and providing for doubtful accounts, amounts to		£199,744 6 2
The Governing Council recommend that this sum be dealt with as follows:—		
To write off Preliminary Expenses	£39,015 19 3	
In Payment of a Dividend on the "A" Ordinary Shares at the rate of six per cent. per annum (less Income Tax) upon the amounts for the time being paid up upon the Shares for the period ending 31st October, 1920, which, together with Income-tax thus deducted, amounts to	£69,241 15 3	
To establish a Reserve Fund against Investments in Foreign Countries	£10,000 0 0	
Leaving a balance to be carried forward to next year of (subject to Income and Corporation Profits Taxes)	£81,486 11 8	
		£199,744 6 2

In order to provide adequate accommodation for the Bank's business, a freehold site has been acquired in Gracechurch Street, London, E.C., and the erection of a new building will be commenced in the near future.

During the year, as already announced, the Bank undertook the formation, in conjunction with Polish Interests, of the Anglo-Polish Bank, Limited, Warsaw. This Bank has been in operation for the past nine months and shows promise of filling a useful place in the development of business relations between Great Britain and Poland.

A close association for reciprocal working in Belgium and this country has been formed with the Banque de Bruxelles, Brussels, and its affiliated Banks.

The establishment during the year of a Superannuation and Provident Fund for the Staff, upon a contributory basis, has to be reported.

On the invitation of the Council, the Right Honourable Viscount Churchill, G.C.V.O., accepted the post of First Governor of the Bank. The Shareholders will be asked to confirm his appointment and to elect him as a Member of the Council.

In accordance with the Articles of Association, Sir A. A. Haworth, Bart., and Mr. W. Edgar Horne, M.P., retire by rotation from the Governing Council, and, being eligible, offer themselves for re-election.

The meeting will be asked, in accordance with the Bank's Articles of Association, to fix the remuneration of the elected Members of the Council, and also to appoint Auditors for the current year at a fee to be decided upon. Messrs. A. W. Tait, C.B.E., A. S. Macharg and A. Pilling, the retiring Auditors, are eligible for re-election.

By Order of the Governing Council,

ANGUS McPHAIL,
F. H. HOPE SIMPSON, } Managers.

BALANCE SHEET as at 31st October, 1920.

AUDITORS' REPORT.

We have examined the above Balance Sheet and compared it with the Books of the Bank.

We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange and have verified the Securities.

We have obtained all the information and explanations which we have required, and are of the opinion that the Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank.

London, E.C.,
23rd November, 1920.

A. W. TAIT,
A. S. MACHARG,
A. PILLING, Auditors. } Chartered Accountants.

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 0d; Yearly, £2 18s 0d. Colonies and Abroad, £3 1s 0d per Annum.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist," Granville House, Arundel street, Strand, London, W.C. 2.

Single Copies, ONE SHILLING.

Copies of the *Economist* may always be obtained in Paris: Messrs Galignani, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de L'Opera. New York: *Economist* Office, 20 Broad street (Room 1,709), and *Journal of Commerce*, 32 Broadway.

THE MONEY MARKET.

WITH the assistance of maturing Treasury bills, the market has so far been quite comfortably supplied with cash, but advances into January have been arranged at about 6½ to 6¾ per cent., and it is expected that next week there will be a keen demand for credit over the turn of the year. In the discount market there was a fair but rather capricious demand for bills, and rates were unaltered.

The following table shows public income and expenditure for the week ended December 18, 1920 :—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	24·296	Supply Services	15·835
		Interest, &c., on War Debt.....	1·926
		Increase in Exchequer Balances	2·058
		Sundries	·100
		Reduction of Debt	4·377
	24·296		24·296

These operations decreased the National Debt by the sum of £4,377,052, and caused the following changes, which are reflected in our table of National Debt given in another column :—

	Mln. £		Mln. £
Advances from Public Deprts.	+ 2·400	Surrenders of Bonds, &c.	— 1·575
Advance by Bank of England	+ ·250	Depreciation Fund	— ·500
Treasury Bonds	+ ·670	Exchequer Bonds	— 1·250
National Savings Certificates	+ ·450	Treasury Bills	— 5·961
Sundries	+ 1·175	Other Debt	— ·36
		Sundries	— ·30
	+ 4·945		— 9·32

The floating debt was decreased by £3,375,000. Customs and Excise contributed £14,625,000, and Excess Profits Duties £3,360,000 to Revenue.

* * * *

The Bank return shows increases of £950,000 in the stock of gold, and £3,346,000 in the note circulation (of which £700,000 was transferred to the currency note reserve), and a consequent decrease of £2,396,000 in the Reserve. Other securities rose by 6¾ millions, partly owing to discount business done by the Bank for operators who wanted to exchange January Treasury bills into March, and Public deposits declined by 5½ millions, being drawn on to meet maturing Treasury bills. Thus the private deposits were nearly 10 millions higher. The circulation of Currency Notes rose by £9,055,000 to £368,230,800, which includes £2,725,600 for Notes called in, but not yet cancelled. An addition of £700,000 was made to the reserve of Bank of England notes, so that the fiduciary issue becomes £317,555,200, or £3,044,800 below the maximum.

* * * *

The foreign exchange market has been peculiarly disturbed and difficult during the last few days, movements, especially in dollars, being wide, and without any very apparent cause. After being over 3.54 on Friday last, the rate moved erratically on Saturday, and on Monday was at one time as low as 3.47½, hardening, however, again at the close to about 3.50¼. On the following day it was up again to above 3.54, then on Wednesday back to 3.53½, and on Thursday would seem to be about 3.54 again. To some extent these movements have been traced to variations in the Continental demand for dollars, but there have been several heavy operations in the market not yet explained. Rates for futures are on the whole rather narrower than the week before, being 1½ to 2 cents for spot for one month (1¾ to 2½ cents last week), 3 to 4 cents for two months (3 to 3½ cents), and 4½ to 6 cents for three months and longer (5 to 6 cents). The French rate, on the whole, has moved up again, being 59.60 on Thursday, as compared with 58 on Friday last, and there would seem every probability of this movement continuing as there is very little optimism to be found in Paris at present. Rates have also moved against Brussels from 55.15 on Friday last to 56.55 on Thursday. Recent scare rumours, however, as to conditions in Brussels should be treated with great caution, and it would seem that on the whole Belgium has so far been less affected by the prevailing stagnation than elsewhere. As will be seen, the spread between Paris and Brussels has widened again. Quotations for futures in French francs are 32 to 38 centimes per month under spot, as compared with 30 to 45 centimes a week ago, for Belgian francs, 40 to 50 centimes, as compared with 35 to 45 centimes. The very slight improvement shown during the course of last week on the lira has again been more than lost, the quotation yesterday being 103. On the whole, the neutral exchanges have moved rather more strongly than usual in our favour, sterling having recovered in Amsterdam from 11.16 on Friday last to 11.27½ yesterday, in Switzerland from 23.15 to 23.24½, in Madrid from 26.95 to 27.40. It is worth remembering that since the Spanish position has grown so much more unfavourable Spain is now pressing hard for the repayment of its loan to France, which has already been postponed several times, and that the instalment of 35 million pesetas, which fell due on December 20th, has only been postponed with considerable difficulty until January 20th. Further trouble is arising for France, through new Spanish regulations which have materially increased the difficulty of the sale of most French products in Spain, and this coming on the top of a recent extension of the Roumanian prohibited list, which has hit French luxury exports hard, has created much uneasiness in Paris. Of the Scandinavian countries, Stockholm has moved very slightly in our favour, Copenhagen has remained almost stationary on the week, and Christiania has gone slightly against us. The German mark, after going up to nearly 260, is back again at about 255; the Finnish mark at 135 shows a further satisfactory improvement. Vienna and Warsaw, although slightly higher than last Friday, are a little better than the worst quotations of 1,550 and 2,250 respectively on Monday. The movement noted last week in the yen has continued, the rate now being quoted at 2s 8½d, as compared with 2s 9½d on Friday last. The rupee, on the other hand, has improved a little to 1s 5¼d. South American rates have again moved on the whole slightly in favour of London. Silver has again lost last week's slight recovery, and Hong Kong and Shanghai have in consequence again moved in our favour.

EVENTS OF THE WEEK.

DECEMBER 18TH.—Both Houses of Parliament meet.

DECEMBER 19TH.—King Constantine returns to Athens.

DECEMBER 20TH.—Farrow's Bank suspends payment.

DECEMBER 21ST.—Unemployment debate. Dyestuffs Bill read a second time in House of Lords.

DECEMBER 22ND.—Mr Balfour reviews work of League of Nations in House of Commons. Coal strike in Rhondda Valley. Select Committee on Telephone Charges issues report.

A DISTRESSFUL CHRISTMAS.

SELDOM have the outstanding features of our economic position been more unfavourable at this season of goodwill and festivity than they are this year. With unemployment rife, short time general, demoralised stock markets, stocks of goods that are difficult to sell—or even unsaleable—when offered below cost of production, and a consequently uncomfortable feeling on the part of all who own them or have lent money against them, we have a most depressing setting for the festival which in pagan times welcomed the turning of the sun towards longer days and more genial warmth, and under the Christian era bids us think of peace, and hope, and kindliness. The economic machine is seriously out of gear, and it will take all the best efforts of us all, working in harmony to that end, to keep it working and get it back to its old efficiency, and then go forward to the great developments that are possible and certain, if only we work together to make the best use of our materials and knowledge. When the war was over some of us thought that great things were possible in material progress, that the work of reconstruction might go forward with little interruption, and that the after-war recovery might astonish the world in its rapidity and success, just as the world was staggered by its own power to sustain the strain and length of a war on a scale that had never been imagined as possible. If all nations and classes had worked together to repair the war damage these things might have been done. But as it turned out, it was asking too much of human nature to expect them to do so, and they did quite otherwise. The nations have haggled and boggled over the spoils of war, the victors have not even yet decided what they will ask the vanquished to pay. Little new nations have asserted their new dignity by setting up trade barriers and indulging in the expensive luxury of military ambitions, and all over the world Government expenditure has been wanton and blindly reckless of the interests of industry, the sole source of the wealth that it dissipates. After more than two years since "cease fire" was sounded, we have made little or no approach to real peace and international co-operation. So much we can chalk up to the debit of those who have ruled the world at this crisis. It is not an edifying score, but before we proceed to lay all the blame for our present distresses at the door of our rulers, let us remember that the difficulties which they had to face were, and are, gigantic, and also that the action of classes and individuals has been at least as bad and disastrous. They also have joined in a scramble for spoil, also with the result that the spoil has largely vanished, or even become a minus quantity. The flaunting of war wealth by the new rich, the opposition that they raised to any attempt to correct the war's economic injustices by retrospective taxation, the eagerness of producers and merchants to maintain war-time profits, the cry for Protection to guard industry against foreign competition, the constant demands of labour for higher pay, lighter work, and better conditions at a time when industry had a most difficult corner to turn—all these evils have helped to produce the present state of affairs. All classes of the community, except those which were too weak to join in the scramble, have to share the responsibility, but in the case of labour, there is the very great excuse of the justified belief that it had not a fair share before the war, and had to fight with might and main against any attempt to put it back to pre-war conditions. Some people believe that too rapid deflation of credit and the high Bank rate have also been causes of the change in the economic outlook. But it remains to be seen, when the banking figures for the end of the year appear, whether any deflation of credit has taken place, and it may at least be argued that the only practical effect of raising Bank rate has been to cost the taxpayer 20 millions a year more on Treasury bills.

From this crop of tares we reap the present harvest—trade deadlock and widespread unemployment. What is the remedy? The question of unemployment was debated in the House of Commons on Tuesday, and the Government's proposals to meet it were put forward by Dr Macnamara. On the whole, they seem to be on the right lines, though the suggestion of a payment to the building trade unions of £5 per head for each ex-service man admitted and trained was denounced by Lieut.-Commander Hilton Young as blackmail—"extracted from the nation in order to induce the unions to recognise an ex-service man's right to get back into employment"—and Mr Clynes, summing up the Government's proposals as a few makeshift "lines of relief that will keep the wolf from the door for a few weeks only," laid stress on the need for real peace abroad and the revival of international trade by the grant of credits. A notable contribution to the debate was made by Sir Allan Smith, who urged that the first duty of the Government is to leave the employers and trade unions alone, and that employers should "come together and see to what extent, at least in the larger branches of industry, each branch is capable of carrying its own load of unemployment, because that will be the first thing to settle industrial unrest. It will be the first thing to give the workman freedom to open out to the fullest extent on his job because he knows that that will not put him in an evil position to bring about his early discharge." Sir Allan's authority, as a great employer, is weighty on these questions, and he is in a position to do much to further the reform that he suggests, the benefits of which might be quite incalculable.

As to the need for peace and the re-establishment of international trade, the Prime Minister told the House that peace is coming gradually; and his bitterest critics generally admit that he himself has worked hard to seek and ensue it in the face of many difficulties. He also stated that some sort of credit insurance system is being considered by the Board of Trade in conjunction with some very able business men, "to enable us to do business with Central Europe, and to give Central Europe time to pay"; and, further, that we are considering whether it is possible to sell our large stores of wool (as suggested in last week's *Economist*) to Central Europe upon a credit system. "Until," he said, "you restore healthy conditions in Europe and in the world, we shall have an appalling problem of unemployment in this country, which will be beyond grappling with." All this is a satisfactory indication that the Government recognises at last that the trade position is serious; but there was a most deplorable absence from the Prime Minister's speech of any recognition that the best thing the Government can do is to cut down expenditure, relieve industry and finance from the present burden of bad taxation, and then leave them to work out their own cure. In America, as our New York correspondent's interesting letter shows on a later page, the banking and business world is getting to work to enable Europe to be a market for American goods; and an Anglo-French engineering group has undertaken a big contract for the repair of rolling-stock on the

Roumanian State railways. If the Government will check waste and leave industry and finance with a margin for investment, we can join in this work of reconstruction; if capital will take the necessary risks, and if labour will recognise that the best way to maintain wages is to give a good day's work in return for them, it may be that the present crisis will be a beginning of better things, and that next year may be one of real and lasting recovery.

E.P.D. AND THE NEXT BUDGET.

A WELL-INFORMED correspondent writes: The question which is exercising peoples minds is whether the E.P.D. can be done away with, and whether it would be necessary to put anything in its place. The purpose of this article is to explore the situation from the figures available.

The Chancellor, in his speech during the Economy Debate, on December 10th, stated that he expected the Revenue of this year to be approximately up to his estimate, namely, 1,438 millions. This sum includes 320 millions of special receipts from the sales of war stocks, &c., leaving a balance of 1,118 millions, which is, correctly speaking, actual revenue, and for the purpose of arriving at the position of actual revenue and expenditure we will treat special receipts and redemption of debt as capital account. The Chancellor also stated that his estimate of 234 millions surplus would be approximately realised, thereby showing that the expenditure for the year would not vary much, namely, 1,184 millions. As is shown above, the estimated revenue for 1920-21 is 1,118 millions, which includes 220 millions from E.P.D., and in the Budget for 1920, with the new taxes then imposed, the estimated extra revenue for the year 1921-22 was 120 millions, which included 100 millions from E.P.D. This means, allowing for no alteration in taxes or decrease in revenue from falling trade, &c., a revenue of 1,238 millions.

The Chancellor stated in his 1920 Budget speech that 300 millions of the estimated expenditure for the current year would represent a transitory charge directly or indirectly due to the war. This deducted from the estimated expenditure of 1,184 millions for 1920-21, leaves 884,000,000, say, 900,000,000. How far can this reduction of expenditure be realised? It is difficult to say, but the Chancellor's statement, issued on December 11th, in answer to the economy motion by Mr Lambert, makes it easier to arrive at a possible estimate.

One thing we know, that the subsidies of this year, amounting to 137 millions, will not be in next year's expenditure, while the Chancellor in his statement says that the expenditure must be 813 millions *without* allowing for any expenditure of the Army, Navy and Air Forces.

His statement is made up as follows:—

	Mill. £
Interest on debt	345
Redemption of war debts	110
Pensions	149
Ex-soldiers' land settlement and training schemes	35
Education	56
Health and unemployment	17
Grants to local authorities and police	23
Grants to provide houses	11
Improvements of roads	7
Revenue Departments, including cost of P.O.	60
	813

Again, for purposes of arriving at this estimate, we will deduct 110 millions reduction of debt, making the total 703 millions. The expenditure this year on the Forces is estimated to be 280 millions, since added to on supplementary estimates by 45 millions, total 325 millions, and hereby raises the chief point, how far this expenditure can be reduced?

Surely it will be safe to estimate this reduction by 125 millions, leaving expenditure 200 millions in all, bringing up the total expenditure to 903 millions *outside* redemption of debt. As shown above, the estimated revenue outside special receipts for the next year on last year's Budget would be 1,238 millions, including 320 millions E.P.D.; by deducting this we arrive at 918 millions. For the falling off of trade and bad times, about a 15 per cent. reduction must be allowed, making a total of 782 millions, but if the E.P.D. is taken off, a considerable increase of income-tax and super-tax must take its place, and an estimate of 50 millions, being less than one-seventh of the whole, viz., 320 millions, would make a total of 832 millions.

Granted the E.P.D. is taken off, it can only be for the coming year, and in the Chancellor's Budget Speech he estimated in his "Recoverable Assets at March 31, 1921, E.P.D. a sum of 400 millions." These arrears go back for some years, and even if one allows for the total of the E.P.D. earned on this year's trading, and payable next year, being cancelled by claims for repayment, we still should have the above 400 millions due. A certain amount of this must surely be cancelled, and if an allowance of 220 millions to be claimed back is made it would leave 180 millions still to be collected. This sum, added to the 832 millions, makes a total revenue for next year of 1,012 millions.

With the expenditure as shown above, namely, 903 millions, there would then remain a surplus of 109 millions. This surplus would be available for contingencies and redemption of debt outside any special receipts from the sale of war stocks.

The statement below shows the figures in tabular form:—

ESTIMATED REVENUE LESS SPECIAL RECEIPTS.

	£
1920-21	1,118,000,000
1921-22	1,238,000,000
Deduct E.P.D.	320,000,000
	918,000,000
Less: 15% reduction due to bad trade	136,000,000
Balance	782,000,000
Add: E.P.D. deferred payments	180,000,000
	962,000,000
Add: Extra revenue from income-tax and super-tax due to cancellation of E.P.D.	50,000,000
	1,012,000,000

ESTIMATED EXPENDITURE LESS REDEMPTION of DEBT.

	£	
1920-21	1,184,000,000	
1921-22	703,000,000	viz.: Chancellor's statement.
	200,000,000	Imperial forces.
	903,000,000	
Leaving	109,000,000	Surplus.
	1,012,000,000	

The above estimate of 15 per cent. reduction in revenue for bad times is a large allowance, as income-tax, the chief source of revenue to be deducted, is based on a three years' average.

It therefore seems that the financial outlook is not unmanageable, that the E.P.D. can be abolished, and that it will not be necessary to substitute any other taxes to take its place.

SAFETY FIRST BONDS.

PUBLIC confidence in Stock Exchange securities is severely shaken by the slump in prices of the current year, and by the process of liquidation which has carried down values of gilt-edged stocks along with everything else. It sometimes happens in critical times that the quotations for the best-class stocks are not only maintained, but frequently move in an opposite direction from that pursued by the more speculative varieties. In the latest depression, however, the good stocks have suffered with the bad, for people have had to sell anything they could lay their hands upon which could be melted into money. The flatness in the gilt-edged market has left a good many stocks at prices which offer excellent yields upon the money, and as for some time to come the assumption is reasonable that investors will seek safety first in their stocks and shares rather than chances of capital appreciation, it is useful to review what British Government loans offer at the present quotations. The War Loan, with interest due on June 1st and December 1st, and redeemable in 1929-47, pays $6\frac{1}{8}$ per cent. on the money, to which another 5s per cent. should be added for profit on redemption. Victory Bonds, which have come down sharply during the past few days,

can be bought about 71, a discount of 14 points on the issue price of less than 18 months ago, and the yield is £5 13s 6d on the money. There is a yearly drawing at par. Taking the average life of the bonds at 28 years, which is a calculation usually adopted in the Stock Exchange, the yield allowing for redemption is raised to £6 15s per cent., while the man who buys Victory Bonds to-day, and is fortunate enough to have them drawn at 100 in some early September, makes, of course, a very handsome profit. The 4 per cent. Funding Loan, with interest due on May 1st and November 1st, is not redeemable until 1960-90, and offers a return of just over 6 per cent. on the money, with another half-a-crown for profit on redemption. There is, however, considerably more attraction in some of the short-dated bonds and stocks in this market, of which National War Bonds afford the principal examples. A short table shows the stocks on offer, and the prices quoted will be found sufficient to allow in most cases for expenses incurred in a purchase. It must be remembered that accrued interest is added to the prices of National War Bonds in the same way as is done with Exchequer Bonds. Taking National War Bonds only, the following table shows the yield available :—

NATIONAL WAR BONDS.

Repayable.	Price, Dec. 21,	Interest Due.	Yield Allowing Red. £ s d
1 Oct., 1922, at 102	97¾ ..	1 A. & O. ..	7 8 0
1 Apr., 1923, at 102	96⅜ ..	1 A. & O. ..	7 13 0
1 Sep., 1923, at 102	95⅝ ..	1 M. & S. ..	7 12 6
1 Feb., 1924, at 102	95½ ..	1 F. & A. ..	7 5 0
1 Oct., 1927, at 105	93⅜ ..	1 A. & O. ..	6 16 3
1 Apr., 1928, at 105	93⅜ ..	1 A. & O. ..	6 16 3
1 Sep., 1928, at 105	93⅜ ..	1 M. & S. ..	6 14 3
1 Feb., 1929, at 105	95 ..	1 F. & A. ..	6 2 6
1 Oct., 1927, at 100	93¾ ..	1 A. & O. ..	*5 1 6
1 Apr., 1928, at 100	93¾ ..	1 A. & O. ..	*5 0 0
1 Sep., 1928, at 100	93¾ ..	1 M. & S. ..	*5 0 0

* Free of tax.

The last three bonds in this list carry 4 per cent. interest. The remainder are 5 per cent. bonds.

It is worth pointing out that the War Loan, now standing about 81½, is accepted for death duties at the issue price of 95, the Funding 4 per cent. Loan is available in the same way at the issue price of 80, and Victory Bonds at par, provided that the stocks in each case have been held for six months previous to date of death. The same privilege is accorded to National War Bonds, both Fives and Fours of all dates and series, and the latter can also be tendered for excess profits duty at their face value under the same condition of being held for six months before the payment of E.P.D. falls due. Earlier this year there arose active demand for such securities by people and companies who intended to use the bonds for tendering in E.P.D. payments next month. A good many of these purchases have now been returned to the Consol market, the contingency against which they were bought having failed to materialise.

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

CUBA.—The inquiry made into the cause of the suspension of the Banco Internacionál de Cuba, perfunctory and superficial though it has been, has served to reveal the detachment which characterises banking operations in the island, and the *exposé* will no doubt have some beneficial effect in regard to future management, particularly with respect to curtailment of branch operations. One of the principal features of Latin American banking has been the establishment of a considerable number of branches, and the problem naturally arising from the practice of having to maintain close supervision and control in the home office, but without interfering too much in the departmental management, has had to be faced. Most of the Cuban monetary establishments fully understand this—a problem which may be said to belong to all systems of branch banks. In this case it has been, perhaps, the exception that proves the rule. The Banco Internacionál de Cuba, although barely three years old, has established no fewer than 105 branches throughout the island. It is considered not improbable that some of these, in the reconstruction process that is foreshadowed, may be dispensed with. Closer supervision and control generally are also likely to ensue, which would be a good thing for the Banco Internacionál de Cuba in particular and for banking in Cuba generally. It may also be that the good sense of the banking community at large will preserve the island from the danger of any more financial crises calling for the interposition of a moratorium. The full effect of this measure has yet to be felt among the poorer and more ignorant of the population, and there is no doubt that certain financiers are feeling anxious.

SOUTH AMERICAN TRADE.—The latest statistics available of the trade of the different Latin American countries show that, as was anticipated, the United Kingdom has not yet recovered to any appreciable degree the position that it occupied before the war. On the other hand, our great transatlantic rivals are prospering apace in those desirable markets, seeking more and more to enter their doors, partly because of increasing difficulty in obtaining sufficient business within the home market to keep their factories fully employed, and partly because of the gaps left by the withdrawal of European competitors—gaps by no means yet filled. There were not wanting optimists who saw in the lower August trade returns some indication that the apex of our rivals' supremacy had been reached, that the tide had turned, and the United Kingdom was about to again come into its own. The Latin American trading figures displayed in the September returns, however, should in some measure serve to damp their enthusiasm. United States' exports to South America in September totalled $54,447,362, compared with $46,643,282 in August, while imports were valued at $62,499,922, compared with $61,301,491. Thus there was a balance of trade of approximately $8,000,000 in favour of South America during the month. American shipments to Argentina and Brazil showed an increase, exports to the former being valued at $21,781,809, as compared with $16,017,245 for the previous month, and exports to Brazil being $15,017,254, against $14,520,291 for August. Imports into the United States from South America totalled $637,754,298, compared with $481,412,454 for the first nine months of 1919. So long as the United States proves the best customer for the sister Republics, these favourable conditions must remain. The way having now been opened for increasing the importance of the United States as a maritime nation, the results of the competition that we must face will prove more severe than ever before.

BOLIVIA.—Considerable pains have been taken in certain quarters to assure investors in Bolivian securities that the newly-installed Government purposes to "strictly respect the foreign debt." There would seem to have been little necessity for this declaration, since nothing of economic importance has occurred in that far-off South American Republic to disturb the equanimity of investors in its bonds. As a fact, the greater part of such foreign capital as has found its way into Bolivia has been raised in France; British holdings are comparatively small, although the great natural wealth of the country might well have caused them to be considerably larger. Our gallant neighbours across the Channel have seldom refused to take a hand in the economic development of this —to us—little-known South American State, and in all probability they have invested there between £5,000,000 and £7,000,000, against our £3,000,000 or £4,000,000. Chile, a discriminating and well-informed neighbour, has also invested largely in Bolivian mines and in the construction of railways; Germany, Switzerland, and the United States are likewise financially interested, and appear anxious to become more so. A Teutonic bank, established in La Paz, was carrying on a very profitable business before the war, suffering very little interruption during its progress. With the declaration of the Armistice, renewed activity was demonstrated, and there is talk of a considerable stir among the dry bones in connection with the exploitation of Bolivia's great, and for the most part untouched, natural riches. We have heard a good deal about the country's valuable tin mines and its wonderful silver. Did not not Raimondi, after wandering over the country and carefully investigating its mineral deposits, declare that "Bolivia is a table of silver supported by columns of gold"? But little has hitherto been heard of the vast possibilities contained in the country's

bismuth, rubber, coffee, cocoa, tobacco, sugar-cane, and other tropical and sub-tropical products. Some day Bolivia will be opened up by means of transportation—possibly aerial, since the physical drawbacks to railways are not to be denied—and then will be revealed opportunities of which we might easily have availed ourselves had we had the foresight to grasp them. Bolivians are anxious to trade with us, and to have us finance them. Why not investigate the chances offered?

Business Notes.

Cost of Living.—At last retail prices, so far as they are measured by the Labour Ministry's calculations, have begun to follow the downward curve on which wholesale commodity prices have been moving for months past. According to the *Labour Gazette* the percentage increase on July, 1914, in the cost of living of an average working class family moved down from 176 per cent. at November 1st to 169 per cent. at December 1st. For food alone the figure at December 1st was 182 per cent. against 191 per cent. a month earlier. This decline was mainly due to a reduction of 4d per lb in the price of sugar. There was a slight fall in flour and potatoes, while eggs and milk became dearer.

Employment in November.—During the first part of November employment was still seriously affected by the shortage of fuel resulting from the coal strike. A partial recovery then set in, but the *Labour Gazette* reports that at the end of November employment generally was still considerably worse than in the first part of October, before the strike began. In many of the principal industries, especially the textile and clothing trades, the furniture trades, boot and shoe manufacture and leather trades, there was much unemployment and short time. The trade union percentage of unemployed at the close of November (mainly of skilled workers) was 3.7 per cent. This figure is compared below with the monthly record for some years past :—

End of—	1913. %	1916. %	1917. %	1918. %	1919. %	1920. %
January	2·2	0·6	0·3	1·0	2·4	2·9
February	2·0	0·5	0·3	0·9	2·8	1·6
March	1·9	0·5	0·3	1·2	2·9	1·1
April	1·7	0·5	0·3	0·9	2·8	0·9
May	1·9	0·5	0·4	0·9	2·1	1·1
June	1·9	0·5	0·4	0·7	1·7	1·2
July	1·9	0·4	0·4	0·6	2·0	1·4
August	2·0	0·4	0·5	0·5	2·2	1·6
September ..	2·3	0·4	1·3	0·5	1·6	2·2
October	2·2	0·3	1·1	0·4	2·6	5·3*
November....	2·0	0·3	1·1	0·5	2·9	3·7
December	2·6	0·3	1·4	1·2	3·2	..

* Excluding coal miners.

The latest figure, it will be seen, is abnormally high. Among the whole of the workpeople covered by the new Unemployment Insurance Act, which came into force in November, the percentage unemployed was also 3·7 per cent.

Coal Output.—The production of coal for the four weeks ended December 11th amounted to 20,768,800 tons, or an average of 5,192,200 tons per week. This is the test period for output, which will form the basis for wages. The table below shows the output in the various districts :—

	Nov. 20.	Nov. 27.	Dec. 4.	Dec. 11.
	Tons.	Tons.	Tons.	Tons.
Northumberland	268,200	246,900	261,100	244,800
Durham	707,500	681,400	702,200	683,300
Yorkshire.....	830,000	821,400	820,500	836,900
Lancashire, Cheshire, and North Wales	483,800	477,500	478,900	475,500
Derby, Nottingham, and Leicester	668,100	677,300	673,500	670,500
Stafford, Shropshire, Warwick, Worcester.....	400,200	398,600	397,800	407,300
South Wales and Monmouthshire	1,073,700	1,043,100	1,036,200	1,047,900
Other English districts.....	113,100	116,400	114,000	113,900
Scotland	666,100	713,700	692,000	725,300
Total.....	5,210,700	5,176,500	5,176,200	5,205,400

The weekly average for the quarter ended September 30th was 4,557,700 tons.

Brazilian Affairs.—The London and Brazilian Bank are informed by the Brazilian Ambassador that in answer to a telegram sent by him he has to-day received a reply from the Brazilian Government that recent rumours of a general moratorium in Brazil were absolutely without foundation. The Brazilian Government has made no further issues of paper money, and the fall in exchange is attributed entirely to the abnormal conditions of international trade, and Brazil's export trade, like that of any other country, has fallen off owing to the stagnation in the consuming markets, whereas, on the other hand, her imports have greatly increased owing to the rush of goods into the country during the past few months, the result of accumulated orders which could not be executed sooner on account of the war conditions hitherto prevailing.

Stock Exchange Dual Control Poll.—By a majority of 894 votes, the Stock Exchange proprietors have thrown out the resolution for authorising their managers to take steps that might lead to abolition of dual control in the House. This is tantamount to a majority declaration in favour of leaving things as they are. The would-be reformers have the consolation of knowing that they rallied a fair amount of support to their side. Possibly the matter may now have to rest until the process of a quarter-of-a-century brings about automatically the desired result of unifying the conflict of interests that exists in Stock Exchange government by reason of the dual control of managers, representing holders of Stock Exchange shares, and Committee, as governing the domestic economy of the House. The resolution which has just been lost was unfortunate in confusing a generally disapproved scheme with the principle that the dual control would be well abandoned in favour of some other plan that might have been evolved by negotiation between the two bodies concerned. The Stock Exchange is singularly and traditionally indifferent to matters which touch its own affairs. In the present case only half of those who were qualified to vote took the trouble to exercise their right.

A German Index Number.—The *Frankfurter Zeitung*, which is fully maintaining its pre-war reputation as a source of financial and commercial intelligence, announces its intention of producing a monthly index number of the movement of wholesale prices in Germany. It is strange that, in spite of the development of economic studies in that country, no satisfactory index number has ever been elaborated there, even before the war. Now, when the movement of prices in Germany is of the greatest interest and importance not only in the country itself, but to everybody who has trade relations with her, the need for such an index number is even more urgent than before, and the *Frankfurter Zeitung* is to be congratulated on its innovation. From the first article on the subject we infer that the index number is based on clear and satisfactory principles, but we should prefer before making detailed comments to wait until the pamphlet announced by the *Frankfurter Zeitung*, fully explaining the basis and method, is in our hands.

Mesopotamian Oil Rights.—It is stated that the British Government will shortly deliver a detailed and complete reply to the American Note; meanwhile, the obvious answer has been given by Sir Charles Greenway, at the meeting of the Anglo-Persian Oil Company, on Monday last. It is that, according to an established principle, the rights granted by the Porte in Mesopotamia before the war to British and other nationals must be recognised by the Power taking over the country, just as those are recognised which the Standard Oil Company had obtained in Palestine. He found the real motive of the agitation of which the Note is the outcome in a desire to render British consumers more dependent on the American monopolists. Possibly this explanation is incomplete; it is known that alarm is felt in the United States at the acquisition by British companies of large oilfields in Central and South America, and at the possibility that American vested interests in Mexico may be interfered with under the Carranzist Constitution. Moreover, it is possible that some of the promoters of the agitation may

hold that the Anglo-French rights in Mesopotamia were cancelled during the war implicitly or explicitly, leaving the way open for a fresh start on equal terms. But this position can hardly be taken up officially at Washington, and Sir Charles Greenway stated that the chiefs of the Standard Oil interests are disposed to take a reasonable view of the situation. American producers control some 85 per cent. of the world's supply of oil at present, and while the opening of foreign oilfields relieves the drain on their resources, their enterprise may be trusted to get its fair share of such fields as are yet unworked or unknown.

Farrow's Bank.—The suspension of this institution with its four million deposits chiefly collected from people of small means, is a most lamentable addition to the many adverse features which mark this Christmas season. It appears to have arisen from causes of long standing, and not have been due to the recent weakness of securities and commodities. The bank had, on June 30th last, paid-up capital £361,423, reserve fund £138,500, current accounts £1,458,317, deposit accounts £2,678,726; on the other side there was cash £307,793, and all the rest was composed of investments (some of which were in freehold properties), advances, loans, discounts, and premises. The position was thus far from liquid. The proportion of actual cash to deposits was below 10 per cent., and there appears to have been no second line of defence in the shape of loans at call and short notice. The bank's history and methods are now the subject of legal investigation. The moral drawn by a Labour leader in the House of Commons, that the municipalities should be empowered to take working-class deposits, so that the savings of working-class people can be sheltered from exploitation, hardly seems to be a true remedy. The savings of working-class people can already go into the Post Office Savings Bank, or into Saving Certificates, but were nevertheless attracted by Farrow's Bank. Nor was Mr Chamberlain's view, that the disaster gives point to the demand for a definition of what a bank is, a much more brilliant suggestion. Farrow's Bank would certainly have come within the terms of any of the definitions of a bank so far proposed. But the great clearing banks might consider whether something could not be done to make banking a more truly democratic institution by catering more readily for small accounts. There might be little profit attached, but the social benefit would be enormous, and the plea for the reduction, or even abolition, of the cheque tax would be greatly strengthened. At a recent meeting of the Statistical Society Mr T. B. Johnstone, a prominent Bristol employer, urged that the tax should be dropped because employers could then pay wages into their workers' banking accounts, with the result that the latter would acquire the habit of keeping money at the banks.

Allsopp's Profits.—As compared with the previous year the profits of Samuel Allsopp and Sons, Limited, for the year ended September 30th last are not quite so good, but the falling off is only slight, and the present standard is very much higher than that of pre-war years. Trading profit for the past financial year amounted to £346,900, as against £355,400 for 1918-19 and £68,100 for 1913-14, the first year after the reconstruction. The summary of results below shows how the company has prospered since the beginning of the war :—

	1914-15.	1916-17.	1917-18.	1918-19.	1919-20.
	£	£	£	£	£

Manufacturers desiring representation in any of the above Countries are invited to communicate with the Company.

Repairs and maintenance took £78,400 for 1919-20 as against £72,100 for the previous year, and depreciation of property and plant £36,500 against £32,900. The reserve fund is credited with £50,000 as compared with £70,000 a year ago, and the sinking fund for redemption of funded income certificates £1,900 as against £2,000. The participating preference stock receives a dividend of 7¾ per cent., while the ordinary stock gets 5¾ per cent. The balance-sheet, which is analysed in detail in the usual column, shows a decline of £364,800 in investments in Government securities, which are taken at cost, and an increase of £281,800 in stock-in-trade. Goodwill remains unchanged at £700,000. At the present quotation the yield on the ordinary stock works out at about £8 15s 6d per cent. The price of the ordinary stock, which fell to 1½ in 1916, rose to 117¼ in 1919 and to 126 this year, but it has now fallen below 66.

Vickers' Report.—The long-expected accounts of Vickers, Limited, have at length made their appearance. They cover the four years ended December 31, 1919, and show a net profit for that period of £4,493,726, which is at the rate of about £1,123,400 per annum. For the year ended December 31, 1915, the profit was £1,099,700. The latest report explains that settlements have now been made with the Government in respect of the accounts, subject to certain minor reservations, but "the matters dealt with were so complicated, and the exact apportionment among the various years was so difficult, that it has been found impossible to present separate accounts for each year." Dividends for the four years absorb £3,967,112, being at the rate of 12½ per cent. for 1916, 1917, and 1918, and 11¼ per cent. for 1919, and the balance of £846,364 is carried forward. A remarkable expansion is shown in the balance-sheet figures, which are compared below with those of December 31, 1915 :—

December 31, 1919.

Liabilities.		Compared with Dec. 31, 1915.	Assets.		Compared with Dec. 31, 1915.
	£	£		£	£
Ord. shares, £1	12,311,548	+ 6,761,764	Land, b'ldings, machinery, tools, plant, &c., after allowance for depreciation at Dec. 31, 1919.....	7,314,095	+ 1,589,609
5% cum. prf., £1	6,851,640	+ 6,851,640			
5% pref., £1 ..	750,000	..			
5% pref. stock..	750,000	..

			Snndry book debts owing to co.....	9,959,544	— 254,085
			Cash and bills	3,361,958	+ 2,486,531
Total	42,516,546	+18,553,107	Total	42,516,546	+ 18,553,107

The second and third mortgage debentures were reduced by annual redemptions, and have been finally paid off. The increases in capital were made in 1918 and 1919, in connection with the acquisition of the Metropolitan Carriage, Wagon, and Finance Company. Of the increase in reserves, over £1,400,000 is from premiums on shares, and £3,000,000 from works reserve account. The report states that practically the whole of the increase under the head of interests in subsidiary companies is due to the purchase of the shares of the Metropolitan Company, which included a controlling share in the British Westinghouse Electrical and Manufacturing Company, with its subsidiaries and interests in other electrical concerns. The year 1919 was devoted to "clearing up war work and

starting up and extending the company's peace business." Largely owing to labour conditions, however, it has been found necessary in 1920 to modify or abandon some of the minor projects which were undertaken. The interim dividend for 1920 was passed, and the quotation for the £1 ordinary shares has fallen below 16s.

Castner-Kellner Alkali.—After falling considerably in the year 1918-19 the profits of the Castner-Kellner Alkali Company for the year ended September 30th last show a substantial increase, and at £283,900 are higher than any total previously recorded. The table below compares results since 1903 :—

	Profit.	Debenture Interest, &c.	Renewal and Depreciation.	Reserve and Carry Forward.	Dividend.	
	£	£	£	£	£	%
1903	59,072	10,509	15,000	6,563	27,000	6
1905	52,358	10,153	23,205	1,000	18,000	4
1906	68,847	10,097	30,000	1,750	27,000	6
1907	116,754	9,697	45,910	7,147	54,000	12
1908	115,528	9,443	31,386	18,449	56,250	12½
1909	134,154	9,313	35,000	26,841	63,000	14
1910	164,554	8,986	32 500	44,318	78,750	17½
1911	178,853	8,789	32,500	47,564	90,000	20
1912	177,063	8,682	32,500	45,880	90,000	20
1913	172,348	8,372	32,500	29,382	106,094	22
1914	174,150	8.275	32,500	21,917	116,458	15½

1916	262,208	7,706	50,000	23,252	181,250	22
1917	263,322	7,648	50,000	45,078	200,000	20
1918	261,339	7,598	50,000	48,819	200,000	20
1919	190,655	7,598	50,000	51,876	130,000	13
1920	283,854	7,598	60,000	48,132	220,000	22

The depreciation reserve fund is credited with £50,000, raising it to £687,500, and £10,000 is set aside as provision for grant to universities. The dividend is raised to 22 per cent., the highest rate paid since 1916, but the distribution requires £220,000, as against £181,250 in 1916, for in that year £250,000 in shares was issued to Brunner, Mond and Co. in exchange for 200,000 £1 shares in that company. The principal changes in the balance-sheet are an increase of £86,000 in debtors, and a reduction of £70,800 in investments, taken at cost. The property item is up by £143,200, and cash is £44,500 lower.

The Kaffir Dividends.—The Christmas dividend declarations of the South African mining companies make a very good showing as compared with the three preceding declarations. The dividends just declared are shown in the last column of the table below :—

Name of Mine.	Amount of Share.	Dividends Declared in— 1919. June.	1919. Dec.	1920. June.	1920. Dec.

(b) £4 shares. (t) £1 shares. (k) 3s 4½ in cash and 6s 7½d in Modder Deep shares. (l) bonus.

The Knight Central mine re-enters the list of dividend-payers after a long period without any dividend, the last having been 5 per cent. for 1910. The New Kleinfontein are paying 1s per share. The last dividend payment was 1s per share for 1917.

Slaters' Recovery.—The directors' forecast in last year's report of Slaters, Limited, that it would not be long before the company entered the list of dividend-paying concerns has been speedily fulfilled. A year ago the accounts showed a profit for the first time since 1913, and the debit balance at profit and loss account was reduced from £53,300 to £11,300. The report for the year ended September 30th last shows that the net profit earned is sufficient to wipe off the debit balance, to pay arrears of preference dividend, and to make a distribution on the ordinary shares for the first time since 1913-14. The table below summarises results since 1905-6 :—

	Tr'ding Profit.	Inter'st and Divs.	Exp'ses and Inter'st Ch'rges.	Net Profit.	Pref. Div.	Ord. Div.	Rate.	Balance.
	£	£	£	£	£	£	%	£
1906	52,021	4,513	19,508	37,203	5,650	30,281	12½	1,222
1907	52,660	4,680	20,443	37,046	5,650	30,281	12½	1,066
1908	48,302	4,718	20,756	32,385	5,650	30,281	12½	2,460
1909	41,630	4,839	21,416	25,193	5,650	19,295	8	223
1910	41,068	3,097	21,834	22,443	5,650	19,200	8	*Dr. 2,417*

1912	42,890	3,119	21,881	24,229	5,650	16,808	7	1,771
1913	44,065	2,169	22,648	23,673	5,550	16,808	7	1,215
1914	42,506	2,133	23,822	20,881	5,640	14,180	6	860
1915	12,786	1,556	20,988	*Dr. 6,603*	3,997	..	..	*Dr. 1,261*
1916	14,261	1,427	22,474	*Dr. 6,786*	..	..	..	*Dr. 45,178*
1917	18,006	2,554	27,337	*Dr. 6,777*	..	..	..	*Dr. 51,955*
1918	23,148	3,315	27,769	*Dr. 1,306*	..	..	..	*Dr. 53,262*
1919	68,612	3,193	29,858	41,947	..	..	..	*Dr. 11,315*
1920	81,306	4,435	31,260	48,481	22,050	7,140	4	7,976

General expenses rose from £11,400 to £15,200, and £1,700 was spent on advertising, as against £250 a year ago, while depreciation allowances were slightly larger. The payment of 6 per cent. preference dividend for 5¼ years absorbs £22,050, and the 4 per cent. dividend takes £7,140, leaving a credit balance at profit and loss account of £8,000. The only change of any consequence in the balance-sheet is an addition of £33,400 to the property item.

Australasian Land Companies : A Correction. — In our article on Australasian land companies last week, the profits of Dalgety and Co., Limited, were incorrectly stated. These should read :—Profits for 1912-13, £223,377, which compares with £262,157 for 1918-19 and £292,577 for 1919-20. We much regret the error.

Oversea Correspondence.

UNITED STATES. — FOREIGN TRADE FINANCING CORPORATION BEING ORGANISED – SHARP FALL IN PRICES OF COMMODITIES—HEAVY LIQUIDATION AND DECLINES IN STOCK MARKET.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 13.

AN event of far-reaching importance to European and other foreign countries, as well as to the United States, was the successful launching in Chicago last week of the $100,000,000 Foreign Trade Financing Corporation. From all sections of this country representatives of banks, manufacturers, exporters, farmers, and others interested in foreign trade met in that city in response to the call issued by the American Bankers' Association, and definitely decided to form the corporation. That the undertaking is meeting with immediate and widespread support is indicated by the fact that the conference unanimously adopted the report of the committee on plan and scope, and a subscription of $100,000 which the committee requested for underwriting the work of organising was obtained in a few minutes. Furthermore, the Illinois Manufacturers' Association has pledged $500,000 towards the capital stock of the corporation, with the announcement that it will double that amount if necessary. In accordance with the terms of the Edge Law, under which the new corporation will be formed, 25 per cent. of its authorised capital stock of $100,000,000 must be paid in

ALL the functions of a commercial bank center on the facilitating of business operations. The Irving organization groups its functional activities and lodges responsibility for conducting each group in a distinctive department. Whether the department has to do with import and export transactions or with domestic affairs, the result is a highly specialized and responsive service for Irving correspondents and customers everywhere.

IRVING NATIONAL BANK
WOOLWORTH BUILDING, NEW YORK

LONDON OFFICE: PINNER'S HALL, OLD BROAD STREET

at the commencement of business, and 10 per cent. of the balance every 60 days thereafter. Present indications are that the necessary capital will be quickly supplied. A special committee of nine, appointed by an organisation committee of thirty, is scheduled to meet in New York shortly to elect officers, choose a board of directors, and outline the first steps to be taken by the corporation. It is expected that the latter will be ready for active operations next month. The committee of nine is headed by John McHugh, of this city, chairman of the Marine and Commerce Committee of the American Bankers' Association, and also chairman of the committee of thirty named to supervise the formation of the corporation. Other members of the latter committee, many of whom are well known on your side and in other countries, are Herbert Hoover, Paul Warburg, Charles H. Sabin, Fred I. Kent, A. C. Bedford, George E. Smith, and Louis E. Pierson, all of New York; John S. Drum, of San Francisco; James B. Forgan, Thomas E. Wilson, Arthur Reynolds, Alexander Legg, and Joseph de Frees, of Chicago; F. O. Watts, of St Louis; J. R. Howard, of Clinton, Iowa; J. B. Culberson, of Wichita Falls, Texas; Levi L. Rue, of Philadelphia; Philip Stockton, of Boston; Oscar Wells, of Birmingham, Ala.; Julius H. Barnes, of Duluth, Minn.; Herbert Myrick, of Springfield, Mass.; John S. Lawrence, of Boston; E. M. Herr, of Pittsburg; Roy D. Chapin, of Detroit; John S. Raskob, of Wilmington, Del.; Charles A. Hinch, of Cincinnati, O.; Peter W. Goebel, of Kansas City, Kan.; Thomas B. McAdams, of Richmond, Va.; and John Sherwin, of Cleveland, O. Reasons why this corporation—the largest banking business ever organised—is being formed, and its plan of operation are clearly and concisely stated by a member of the above committee. "Foreign nations, and European nations in particular," he said, "impoverished by the last six years, have no further liquid assets with which to pay for our goods. Our manufacturers and producers are unable to accept long-term payments, and thus tie up the money invested in producing the goods over a period of years. The only way in which this diverse position of the two parties to the transaction of our exporting can be adjusted is through an agency capable of accepting the offers for long-term payments from foreign nations, and advancing the money on them immediately to the American producer and manufacturer. This is a task beyond the scope of the ordinary commercial bank of this country, whose assets must always be in readiness for demand." The plan which has now been decided upon, he added, calls for "a single institution, national in its scope and control, of great financial power, operating under the supervision of the Federal Reserve Board and in accordance with the terms of the Edge Law, which shall receive foreign securities and, by selling debentures against them to the American investor, furnish to the American producer and manufacturer immediate payment for his exports. The plan is for an institution of sufficient magnitude to take the place in relation to our foreign business that the Federal Reserve Board occupies with respect to our domestic business." One of the avowed objects of the new corporation will be "to demonstrate to the American people the fundamental soundness of foreign investment and its need." At the Chicago conference it was decided that the extension of credit should be confined to countries where there is a stable Government, and where there is an assurance of integrity of purpose; and that the operations of the corporation should be confined to financing for the benefit of future foreign trade. All agricultural, manufacturing, financial and labour interests will be urged to give the new corporation their financial and practical co-operation. The representative of one of the leading financial institutions identified with the movement characterises the enterprise as "the thing most necessary for the re-establishment of confidence, both in Europe and the United States, to keep business going sanely and labour properly employed."

Last month's sharp declines in such commodities as wheat, cotton, iron, copper, and coffee clearly foreshadowed a heavy drop in the general average price; but the shrinkage was far greater than had been expected. Bradstreet's index number of commodity prices on December 1st, namely $13.6263, showed the extraordinary decrease of 13 per cent. from the November 1st level, and of 34.6 per cent. from the year's high point reached on February 1st. Probably never before has such a drastic decline in so brief a period taken place in this or any other country, with the possible exception of the severe slump in Japan earlier in the year. The reduction which occurred in November is the heaviest, in both amount and percentage, recorded in any month since last February, and the index number is the lowest reported since November 1, 1916. In other words, the general average of wholesale prices is now lower than that prevailing in the months before this country entered the war, and while it is still 56 per cent. above the general price level of August 1, 1914, 60 per cent. of the six-year war and post-war advance in the general average has been cancelled in the short period of ten months. As Bradstreet's remarks, this decline has perhaps been more precipitate than has been warranted by trade conditions, as would seem to be indicated by the fact that since December 1st there have been rallies in certain commodities, notably wheat and other grains, flour, cotton, grey goods, lead, and various other products. As for some time past declines in prices during November were most pronounced in the textile group, principally raw materials and staple cotton goods. Next

in extent of decline were provisions and groceries, and then hides and leather, metals, oils, live stock, naval stores, chemicals and drugs.

Additional data from the Department of Commerce, showing our October exports and imports classified by countries of destination or origin, are interesting, because of their bearing on European and other exchange rates. Exports in that month to all continents exceeded those of September, but by far the largest part of the increase—$120,000,000 out of $146,000,000—was on account of the shipment of commodities and goods to Europe. Of the European increase, the greatest portion was due to exports to France, which were nearly $32,000,000 larger than in September, the total shipments to that country amounting to $79,000,000. Exports to Germany increased by $13,000,000 to $33,000,000, while the increase to Great Britain was only $18,000,000. Generally speaking, the month's increases were largely due to the seasonal outward movement of cotton and grain. The decrease of $30,000,000 in imports, as compared with September, resulted principally from a decline of about $17,000,000 in arrivals of sugar from Cuba; imports from Argentina decreased $8,000,000, and from Japan $6,000,000.

During the past week heavy and continuous selling pressure in the stock market has caused more extensive declines than any witnessed since the November money stringency. Leading industrial shares fell during that period from 8 to 16 points, while standard railroad issues lost from 4 to 8 points. Many securities went below the previous minimum prices for the current year. The average price, at last Saturday's close, of 20 active industrials was 72.06—a new low record for 1920—while the average of 20 railroads was 73.32; the latter is still a few dollars above the year's lowest average. Bonds also reacted from 1 to 4 points. The unsettlement is attributed to speculative short selling and widespread liquidation owing to the unfavourable business situation and outlook. There is also reason to believe that many interests found it necessary to liquidate holdings of securities to raise funds for income-tax payments due December 15th.

FRANCE.—RAILWAY BILL—THE FALL IN PRICES—COAL—SHARE PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, December 21.

THE outstanding feature of the Parliamentary week has been the passing by the Chamber, by 407 votes to 153, of the new Railway Bill, which it is hoped will once more place the French railways on a prosperous footing, and enable much badly needed development to be carried out. The general principles of the Bill were dealt with in this column recently; it may be interesting now to set forth as briefly as possible a few details as to its origin and objects. Since 1859 the French railways and the Government have entered into a large number of agreements, in order to render possible from time to time the extension of the existing systems into districts whence for some years to come it would be impossible to expect to derive paying traffics. To enable these extensions to be carried out, the Government has been in the habit of guaranteeing a fixed rate of interest on the capital so invested, on the understanding that the companies would, on the expiration of their concessions in 1950, refund to the State the money advanced under these agreements. The more prosperous companies, such as the Nord and the P.L.M., have always been able to pay the interest due to their shareholders without having recourse to this State guarantee. Others, such as the Orléans and the Midi, and especially the Ouest—now carried on by the State as the Ouest-Etat—have made large calls upon the public funds under these agreements, but it is most likely that this system of State guarantees would have continued to the limit of the concessions had not the war and all that it has involved rendered complete reorganisation of the national railway services obligatory.

What the French railways have suffered as the result of the war is too well known to need more than the merest reference. The transport of millions of French, English, and American soldiers during the long years of the conflict resulted, for all practical purposes, in nothing short of the destruction of many millions' worth of rolling-stock and permanent way material. Further, the rates for the transport of troops were last modified in 1883, and bore no relation, throughout the war, with the cost of combustibles and labour in 1914-1919. It is not surprising that these exceptional conditions have resulted in a total deficit that is estimated to amount to something like 5,000,000,000f by the end of the current year.

The Bill that has now been passed by the Chamber passes the sponge over all that has been advanced to the railways under the heading of guaranteed interest on capital, and also over the whole of the amounts that were advanced to the companies during the war, for the purpose of enabling them to continue working. In exchange the companies who have claims against Germany for losses sustained have handed these claims over to the State, and have abandoned all litigation that had been begun or might be begun in connection with matters arising out of the hitherto existing arrangements between them and the State. Further, the companies have accepted an entirely new régime, comprising, among other things, the setting up of a system of financial solidarity as between the various companies; they have abandoned all State guarantees, and will rely, in future, on balancing their revenue and expenditure by increased tariffs; each company will guarantee its shareholders a fixed rate of interest; it will have a right to a premium in respect of improvements in its methods and exploitation, but the surplus of its profits will be paid into a common fund, to be distributed among less successful companies.

Finally, all the railways will participate in a central council, under the presidency of the Minister of Public Works (on which elected representatives of the working staffs will also sit), which will form a kind of supreme board of directors for the whole of the railways. It is hoped that by this means it will be able to obtain a co-ordination between the various systems that has hitherto been impossible, and particularly that this will render possible the construction of a large number of transversal lines, which, each making use in part of the lines of perhaps several other companies, will materially aid the industrial and economic development of the country. The new régime—which is criticised by the Socialist party as being equivalent to "a gift of 3,000,000,000f to the railway companies," is an apparently judicious compromise between nationalisation and the imperfect method of handling the railways that has hitherto prevailed, and is generally welcomed by opinion as likely to produce good results.

France is suffering, like all other countries, from the inevitable economic difficulties arising from the transition from war conditions back to the normal, and is passing through a series of crises of which the only astonishing feature is that they are not more detrimental to the general welfare. The fall in commodity prices that began in America was followed here by an abstention from purchases in the hope that the vendors would shortly be compelled to restrict their profits, with the result that serious difficulties have been experienced in practically every trade in which there exist large stocks produced before the fall began. In many quarters here the Government is accused of having contributed to increase unemployment by its sudden decision to restrict expenditure on reconstruction; by its failure to keep its pledges to manufacturers, sufferers from war losses, who have been induced by the promises made to them to re-establish their plants; by its delay in making payments for goods supplied under public contracts, and, finally, by its arbitrary increase in the price of coal, which is widely considered as having largely contributed to the difficulties with which French industry is to-day faced.

In a discussion in the Chamber, M. Guy de Wendel, one of the great French ironmasters, set forth some interesting details in regard to the crisis in the metallurgical industry since the return of Alsace-Lorraine to France. The price of coal, he said, was 200f a ton in France, as against 115f in England, 90f to 100f in Belgium, 66f in U.S., and 47f in Germany. French employers were paying 20f for labour, as against 9f in Germany. These factors, he said, combined with Germany's policy of "dumping," rendered competition with

Germany impossible, both at home and abroad. M. de Wendel denied that France, owing to her new acquisitions of iron ore, now had Germany at her mercy. Germany, he asserted, is now producing 60 per cent. of her pre-war output, while the ore we are sending her represents only from 5 per cent. to 8 per cent. of her present output. Now that she had recovered Alsace-Lorraine, France's capacity for metallurgical production had increased, so far as iron was concerned, from her pre-war total of 5,200,000 tons to 11,000,000 tons, and for steel from 4,800,000 tons to 10,400,000 tons. France now stood on a par in this respect with England and Germany. Under present conditions, however, the cost of the coal required to produce a ton of iron in France was 42f more than it would be in Belgium, and 154f higher than in Germany.

The decree just published by the Minister of Public Works, as the outcome of M. Ader's conferences with the British Government in London, however, removes much of the disability under which the French metallurgical trade, according to M. de Wendel, is suffering on account of the high price of coal. Speaking generally, this decree fixed the price of practically all kinds of imported coal at something like half the price at which they were sold here at the end of last May. Thus, best steam coal, delivered at any of the Channel ports, is now fixed at 72s 6d a ton, as against 138s. Swansea steam coal, which ranged from 130s to 105s a ton, according to quality, in May, now costs from 60s to 32s 6d. Anthracite, which ranged from 120s to 160s at the same date, is now fixed at from 70s to 90s for the same qualities.

So much has been stated during the last few weeks regarding a panic in France, that it is perhaps desirable to quote a certain number of shares for 1918, for April, 1920, and December, 1920. In stating these figures, it has to be noted that several of the companies concerned —which according to the *Situation Economique et Financiere* can be regarded as key companies—have increased their capital, and as an inevitable result there has been a drop in the nominal value of the shares. The table published is as follows :—

	Nov. 30, 1918. f.	April 30, 1920. f.	Dec. 14, 1920. f.
Banque de Paris	1,371	1,835	1,338

Financ. des Caoutchoucs	269	415	134
Padang	271	587	170

The companies marked (*) have increased their capital since May, 1920

Two interesting new issues have been announced since the above table was compiled. One is that of 75,000 new shares of 600f each which have been issued (at par) by the Crédit Foncier, bringing the total share capital up to 300 millions of francs. Existing shareholders are given the right to subscribe for one new share for every seven old ones. The other is an issue of 44,000,000f of new capital by the Bon Marché, the great Paris department store, in the form of 32,000 new inscribed shares of 156f 25c each, at the price of 1,500f each. Simultaneously with this issue the sum of 39,000,000f derived from the premiums paid for the new shares will be incorporated in the share capital and applied to increasing the nominal capital of the 160,000 shares (128,000 old and 32,000 new), which latter will be increased from 156f 25c to 400f per share.

ESTABLISHED 1810

THE MECHANICS & METALS NATIONAL BANK

OF THE CITY OF NEW YORK

Capital (fully paid), Surplus and undivided Profits

$25,000,000

This Bank finances exports and imports, buys and sells foreign exchange, cable transfers, etc., and makes collections on all parts of the world.

GERMANY.—POLITICS — MUNICIPAL TAXATION — EXCHANGE AND BOURSE—INDUSTRIAL "SELF-GOVERNMENT."

(FROM OUR CORRESPONDENT.)

BERLIN, December 18.

THE Coalition Cabinet this week went through a fresh crisis owing to the vote against a not very important clause in the Emergency Levy Bill by one Government party, the German People's Party, and to the abstention from voting of the Democrats, also a Government party. After a conflict which threatened a Government upset, the first-named party gave way. The Municipality of Berlin, which is in control of the Socialists, has launched a long-threatened very radical taxation scheme. One project is for a new municipal income-tax. The old municipal in-

come-taxes (and with them the State income-taxes) were abolished by the Erzberger Financial reform, which imposed a single Federal income-tax, of the yield of which part is to be paid over to municipalities and States. The new Berlin Municipal income-tax is to be levied upon such parts of incomes as the Federal tax exempts. The yield is estimated at 140,000,000m. The next new tax is on all dwelling rooms in houses and flats exceeding by more than one the number of the tenant's family. For the first additional room the tax is 500m, and the rate increases with the number of rooms up to 5,000m a room. A third bill increases the concession tax of restaurants and liquor establishments; a fourth takes 10 per cent. of the rent of hotel rooms; and a fifth levies a tax for each domestic servant, or other household employee. Families employing one servant pay 100m, those employing more than three 2,000m for each over that number.

The foreign exchanges, with the exception of the Austrian, which has gone down headlong, moved little during the week. The Reichsbank report for the first week of December shows a considerable decrease of pressure, which is ascribed to increased sale of Treasury Certificates. The holding of bills, cheques, and discounted Treasury certificates fell by 5,595,564,000m to 49,979,083,000m; and of deposits by 5,778,651,000m to 51,145,405,000m. The note circulation increased by 400,236,000m to 64,884,655,000m, while the Kassenschein circulation fell by 92,400,000m to 12,278,000,000m. The Bill legalising dealing in exchange, whether bills, coins or notes, for future settlement has become law, in the form of an amendment to the Bourse Law putting currency in this respect on the same level as stocks and shares. The form of organisation of this new business has not yet been determined. The measure will be a considerable relief to merchants, who will be able to protect themselves against loss by exchange fluctuations between date of conclusion of foreign sale or purchase contracts and payment date; and it is expected that it will diminish a little the instability of the Reichsmark's exchange by fostering regular bull and bear interests which will react to every heavy fluctuation by purchases or sales. Should this result be attained, greater stability is also promised for the stock market, which moves in accord with the exchanges.

The Stock Exchange during the last days of the week was favourably influenced by an inspired statement that the Compulsory Loan plan has been let drop. This statement declares that from a compulsory loan no good effect on the exchanges or on the currency inflation could be expected; the result would be that private credit would be raised on security of the loan certificates instead of as now on Treasury bills. During the week the bourse was moderately firm, but reserved. The American industrial crisis was taken favourably, as an influence that might force America to supply Germany with surplus raw materials on credit. Federal Loans are to-day quoted :— 5 per Cent. War Loan, 77.50; 4 per Cent., 66.75; 3½ per Cent., 59.20; 3 per Cent., 67; Colonial 4 per Cent., 74.25; and Savings and Lottery Loan (1919), 89.10.

The Ministry of Industry is preparing a Bill which will alter the Government of the "Eisenwirtschaftsbund," the compulsory trust of all heavy iron and steel producing concerns, formed early this year, and directed, as far as higher policy goes, by a Council representing producers, traders, and consumers, with equal representation for the employees in each branch. The Bund controls pig-iron, ferromanganese and ferrosilicium, also steel, rails, plates, wire, and the other finished and half-finished products formerly controlled by the now extinct Steel Works Syndicate. It is a type of the industrial "self-government," planned by the former Assistant Minister of Industry, von Moellendorff, for all branches of production, but applied so far only to coal, iron, and potash. The "Eisenwirtschaftsbund" is discontented, complaining that the new "Self-Government" is a fiction because the Ministry of Industry, just as before the Bund's formation, insists on itself directing affairs. Herr von Moellendorff lately declared that owing to the same bureaucratic interference the whole Self-Government scheme had been brought to naught. According to the Bill now under preparation, the Ministry will relinquish part of its power to control and interfere, but increased power will be given only to the consumer element in the Council. The iron and steel producers are dissatisfied with this plan, declaring that it will put practically the whole control of the industry into the consumers' hands. In general the new system of "Self-Government" is having a bad time. The taking up again of the issue of coal socialisation is due mainly to the feeling that the compulsory coal syndicate has failed, and against the third of the "Self-Government" creations, the Potash Syndicate, a violent agitation is going on on the ground of its price policy and other measures.

INDIA.—THE BRUSSELS CONFERENCE REPORT—TRADE RETURNS—MONEY MARKET.

(FROM OUR CORRESPONDENT.)

BOMBAY, November 27.

ALTHOUGH India realises, along with the other nations that participated in the recent International Financial Conference at Brussels, that many of the points raised and discussed were of a Governmental character, and had hardly any bearing on the question of international finance, it must be said that the report of the delegates from India, issued this week, has occasioned more discussion than was at any time anticipated. The reforms suggested to the League of Nations as likely to facilitate credits have, of course, been accepted by financial opinion in this country, but the one point so far as India is concerned which has received much criticism is the statement of Sir Fazulbhey Currimbhoy, the one Indian of the trio from India, that while India was anxious to co-operate in the world's reconstruction, there was a strong body of public opinion in India which favoured a policy of protection for her industries. On these grounds he urged that the question of tariffs should be excluded from the discussions of the Conference as not relevant to the matters actually at issue. This announcement, whilst giving some indication as to the direction of certain winds in India, winds absolutely political, has been described as very ill-advised. The greatest deterrent to India's industrial and social well-being is the activity of her political enthusiasts.

The trade returns for October, just issued, show that India still possesses an adverse trade balance, which shows no immediate signs of abating. Imports amounted to Rs. 32 crores, and have doubled themselves since the same month in 1919 and 1913. This Rs. 32 crores constitutes a record for imports, the previous largest total being Rs. 31 crores for August last. The exports for the month under review, including re-exports, totalled Rs. 21 crores, as against Rs. 29 crores in October, 1919, and Rs. 22 crores in October, 1913. The principal increases under imports were :—Cotton piece goods, Rs. 328 lakhs; sugar, 2 crores; metals, Rs. 1.47 lakhs; cotton yarns, Rs. 1.37 lakhs; motor cars and motor cycles, Rs. 1 crore. Under exports raw jute decreased by Rs. 3.46 lakhs, hides and skins by Rs. 3.32 lakhs, raw cotton by Rs. 1.40 lakhs, and tea by Rs. 123 lakhs.

The Bank of Bombay continues to hold a bigger cash balance than the other Presidency banks, the cash reserves having increased by 61 lakhs during the past week. Gold is coming into the City from the *mofussil,* and is being purchased by the Exchange banks for export. Sovereigns are selling at Rs. 17.2 each. English bar gold stands at Rs. 27.7.6 per tola, as also does Bombay mint gold for ready delivery. Ready silver is at Rs. 106.8 per 100 tolas, having dropped Rs. 4 in a week, and Rs. 4.8 since my last report. London and America have been taking some buying orders from the Indian bazaar during the past few days. Money is still scarce, and there seems no possibility of conditions improving for some time to come. A private wire to your correspondent from Calcutta states that on that side of India financial circles prophesy a continuation of the present slump conditions for at least six months. Calcutta, of course, is exercised at present over the probable yield of her jute crop, which gives her her stable industry and monopoly.

AUSTRIA.—THE NEW PRESIDENT—FALL IN THE CROWN IN ZURICH—THREATENING CRISIS FOR AUSTRIAN INDUSTRY—INTERNATIONAL CONFERENCE REFERRING TO THE LIQUIDATION OF THE AUSTRIAN-HUNGARIAN BANK IN VIENNA.

The National Assembly has appointed as President of the Austrian Republic Dr Michael Hainisch. The result of this election has satisfied all parties of Austria as well as all financial and industrial circles. Dr Michael Hainisch has never been a politician, even never a member of any political party. For many years he has studied intimately, theoretically and practically, the question of agricultural progress, being himself in possession of great estates in Carinthia and Styria. Besides, he has been in a leading position in savings banks, and for some years he has been member of the General Council of the Austro-Hungarian Bank and has written many works of importance.

On December 14th there occurred in Zürich an enormous further decrease of the Austrian crown; 1.05 was reached in some days. It is not easy to say what influences have been the immediate cause of it. Maybe, the dreary situation of the Austrian budget; maybe, the further hesitation of the Allies to give Austria the credits wanted most urgently. This movement brings the great danger that new differences in the wage-question may arise. It also means the perfect impossibility to import any raw materials or coal from foreign countries. An economic situation which will enable certain stabilisation of the crown is a strict condition for any successful work of Austrian industry and full employment of Austrian workers.

The governor and the general secretary of the Austrian-Hungarian Bank have returned from Paris, while Dr Reisch, the former Minister of Finances, has proceeded to Amsterdam for settling the question of the Holland credit. The result of the conferences of Paris has not only been a thorough discussion of the liquidation of the Austro-Hungarian Bank, but it has also been resolved that in the last days of the old year or in the beginning of 1921 a conference will be held in Vienna, where all questions of the liquidation are to be discussed and settled in its principles. This conference will see delegates of all National States on the territory of the former Austro-Hungarian Monarchy, the delegates of the Austrian section and other sections of the Reparations Commission, the representatives of the Austro-Hungarian Bank, and the Austrian and Hungarian Ministry of Finances.

SWITZERLAND.—THE ORIENTAL RAILWAY BANK OF ZURICH—LEU, LIMITED.

(FROM OUR CORRESPONDENT.)

GENEVA, December 20.

This holding company of the German railway interests in the former Turkish Empire is still in a state of uncertainty. The bondholders continue receiving their interest regularly. The necessary money in Swiss francs (the bondholders are practically all Swiss) is advanced by the banks represented on the board, chiefly German, but including the Crédit Suisse and the Banque Commerciale de Basle. As to the shares, about one-third of them belong to the Swiss public, and they have not received any dividends for some years. Nevertheless, the Swiss stock markets quote the shares rather high, and during recent months considerable purchases have been noted emanating from foreign countries, chiefly Germany. The Swiss holders—bondholders as well as shareholders—are rather tired of having money invested in Turkish railways, and they would prefer liquidation through a purchase of the Anatolian Railway, the Bagdad Railway, the system Mersina-Tharsus-Adana, by the Powers who have divided the various parts of Asiatic Turkey into *sphères d'influence*. But the recent purchases of shares from the German side indicate an effort to maintain the control of the railways of the whole Asiatic Empire of Turkey in one hand, that is to say in that of Germany. The annual report just published is in its wording a sort of compromise between both tendencies—the Swiss wish of a profitable liquidation by the help of the Swiss Government and the German wish of reintegration. In the meanwhile the English, French, and Kemalist military authorities rule the lines in question, and the income has not passed to the Zurich company since the end of the hostilities; the income of the last years of war arrived only in German currency, and is still deposited with German bankers, causing to the Zurich Oriental Railway Bank a currency loss amounting to 9.5 million francs, or more than one-fourth of the paid-up share capital. The intrinsic value of the assets in the case of a friendly liquidation facilitated by the Great Powers as well as by the local Turkish authorities would surely compensate this currency loss. Unfortunately, it is very doubtful whether the recent buyers of shares are agreeable to a friendly agreement with the victors of the war. From the Swiss point of view this would be far better.

The Zurich bank Leu, Limited, proposes to its shareholders to transform their bank into a "company of liquidation," and every owner of a share of Leu, Limited, at a face value of 500f, will receive a share of 500f of the liquidation-concern shares, which will yield probably 1.25 per cent. a year interest, and which will after many years have a value of 500 Swiss francs, when Germany will really be able to pay gold marks. The commercial department of Leu, Limited, which was very prosperous and strongly developed, is not affected by the fortunes of the mortgage department. Therefore, the Union de Banques Suisses, which becomes more and more the most active Swiss bank, is ready to overtake this commercial department, including the control over three other commercial banks in Soleure, Berne, and St Gall against issue of new shares, which will enable every shareholder of Leu, Limited, to receive for four Leu shares one share of the Union.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised	£3,000 000
Paid Up Capital	1,050,000

Fixed Deposit Rates will be quoted upon application.

On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

Letters to the Editor.

NATIONALISATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I see that Mr J. Ellis Barker returns in your columns to an attack upon my "Triumph of Nationalisation." It is really not a little surprising that Mr Barker should have so little respect for the intelligence of your readers as to find in the post-war conditions of the German railways evidence that Democracy is inconsistent with socialised industry. The German railways have been deprived of material by the Peace Treaty, even while German industry has been mulcted of much of its basis—coal. Suppose that we had lost the war, and that Germany had secured as indemnity a big slice of our coal output and a considerable proportion of our railway stock. Would it have been reasonable to deduce from the resulting conditions of British railway traffic any argument *pro* or *con* any method of management whatever?

Thus also with coal. It is quite unfair and unreasonable to compare American and British outputs per miner. No one with a scraping acquaintance with the respective natural conditions in the two countries would do it.

What Mr Barker really proves is how bankrupt is his attempted reply to the mass of evidence which my book marshals.—Your obedient servant,

December 18th, 1920. LEO CHIOZZA MONEY.

Books and Publications.

REVIEWS.

"The Bankers' Almanac and Year-Book, 1920-21." London: Thomas Skinner and Co., or Waterlow and Sons, Limited. 42s net.

DURING the past two years two features have stood out prominently in questions affecting the banking world. The first has been the raising of additional capital by many banking institutions, and the second has been the general tendency to seek further business connections either by amalgamation or by working agreements far afield. These operations are reflected in the 1921 edition of the "Bankers' Almanac and Year-Book," which has just reached us. In compiling a work such as this, the authors must be impressed by the necessity of some precise definition of the word "Bank," especially in view of the large addition which has been made to the number of institutions dealt with in the present volume. It is difficult to estimate the value of this work to the average banker, but it is no exaggeration to say that a bank could not be considered to be adequately equipped without one copy at least on its bookshelves.

"Industrial Problems and Disputes." By Lord Askwith. John Murray. 1920. 21s net.

"AUTOBIOGRAPHICAL MEMOIRS" might well be the subtitle of this volume, for it is very largely an account of the life-work of our late Chief Industrial Commissioner. The author passes in review nearly all the important industrial disputes, actual and averted, which have covered the page of history since the dock strike of 1889. In a very great proportion of the cases described he has himself been concerned as conciliator or arbitrator. His judgment on the great question of our day is as follows:—"If peaceful arrangement is the best issue for the country.....the two camps or armies now fixed, or getting fixed, in growing hostility, have got to amalgamate in a common purpose .....and capital, being unable to beat Labour, as it has tried to do, must more and more recognise that man is not a mere producing machine....." The chief morals that the author would draw from his narrative are the criminal folly of neglecting the education of our youth in and out of the workshop—disillusionment, leading directly to bitterness and discontent, is apt to be one of the first results when a lad enters employment—the lack of co-ordination of Government departments, and the iniquity of political interference by Cabinet Ministers in industrial disputes. The book gives the fruits of ripe and unique experience, though the fastidious may find its personal character rather distasteful.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 29.	December 30.

IN spite of a rally in some of the more speculative markets, Stock Exchange prices have gone from bad to worse. The failure of Farrow's Bank led to sharpening of rumour in connection with other institutions which for some time past have been somewhat suspect, and when renewed selling broke out in the Consol market, this was attributed to forced realisations on the part of those who had to sell large amounts of stock in order to raise money. The War Loan has fallen to the lowest price touched since its issue, and Victory Bonds, Funding Stock, National War Bonds, and others of this kind are severely depressed. Corporations keep fairly steady, nor is the market for Home Railway pre-ordinary stocks affected to any noticeable extent. Foreigners are nearly all flat. It cannot be said that the bonds of any one country stand out in particular as having been attacked, because the whole list has given way. An occasional rally in French bonds has been among the very few indications that bargain-hunters—or possibly market bears—consider that the present time offers a good opportunity for laying in stock.

The particular feature in the market for Home Railway ordinary stocks is the flatness of the Scottish group. This underlined the gossip to the effect that financial trouble is not confined to the English side of the border, and that extensive speculative engagements which have fallen due for settlement in Scotland during the past two or three weeks have compelled holders of railway stocks to bring their securities to market. Grand Trunks are rather lower. Mexicans derived no benefit from publication of the report. Argentine railway stocks have given way with the rest, and Brazilians followed suit.

The rubber share market has approached demoralisation. Or possibly it may be more correct to say that the market has come nearer the stage at which it becomes difficult to sell shares at all. The oil market has felt the force of liquidation, not only from this country, but from the United States as well. Paris contributing a few sales of Mexican Eagles, although not to any particular extent. A brisk rally on Wednesday hoisted prices substantially above the worst. The Lipton meeting, at which it was stated that the directors had no present intention of issuing new capital, caused a slight stiffening of the price, but the Imperial Continental Gas meeting, which practically confirmed expectations in regard to the distribution of dividend and cash, brought about a sharp drop in the quotation. Ebbw Vale Notes have fallen to 10 discount sellers. Vickers slumped in advance of the issue of the directors' statement, giving

figures for the past four years. Dunlops, after their acute flatness, came to anchor about 15s. Colonial and foreign banking issues are easier in many cases. The insurance group shows no recovery. Cunards gave way when it became known that underwriting is in progress in respect of an issue of £4,000,000 7 per cent. debenture stock, to be offered at 90. The iron and steel market is heavy, owing to reports from various parts of the country as to the necessity for works partially to close down. The Allsopp report caused a drop of several points in the stock. Disappointment at the Marconi interim dividend being halved led to a sévere drop in the price of the shares. Dealings have begun in Radio Corporations, after an interval of eight months, during which the holders of the old American Marconis, now Radio Corporation shares, have had to nurse their stock in patience. Electric manufacturing shares continue to droop for fear of cuts in the dividend. The spectre of unemployment stalks through the industrial markets of the Stock Exchange, with its threat of diminished profits and reduction, or passing, of dividends. There has been a certain amount of business, but most of it difficult to transact, and, as may be surmised, usually at prices unsatisfactory to those who wanted to sell. Nevertheless, the House took heart at the firmer tone that developed later in the week. Once more it is asserted that the worst of the liquidation is probably over.

Kaffir shares have gone back, although not quite so badly as those in other parts of the House. The dividends declared during the past 10 days from the leading gold producers are decidedly good, showing increases in many cases. With the price of gold down, however, and general conditions depressing, the Kaffir Circus was unable to hold up against the prevailing tendency. Weakness occurred in other mining markets, Mexicans, Russians, Broken Hill, and tin shares giving way in their various sections. In spite of the heaviness that still prevails in the majority of the markets round the House, the Stock Exchange managed to keep up its spirits with surprising vivacity, and the House has beguiled the dulness of its markets with appropriate Christmas joviality and heartiness.

NEW ISSUES.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

5-15 Year Treasury Bonds (Series B).—Repayable at par on May 1, 1935, bearing interest at a minimum rate of £5 per cent. per annum, payable half-yearly on May 1st and November 1st. Price of issue fixed by H.M. Treasury at £100 per cent., payable on application. The conditions are the same as for the first series, except that the first dividend date will be May 1, 1921, after which date the two series will be identical. For full particulars see *Economist* of May 1, 1920, pages 899 and 915.

Ash's East Kent Brewery Company, Limited.—Authorised capital, £200,000, divided into 20,000 8 per cent. cumulative participating preference shares of £5 each, and 100,000 ordinary shares of £1. This is an issue at par of 10,000 8 per cent. cumulative participating preference shares and 50,000 ordinary shares. After 8 per cent. has been paid on preference and 10 per cent. (free of income-tax) on ordinary shares, surplus profits will be divided equally until the preference shares receive 12 per cent. in all, after which the balance will go to ordinary shareholders. Preference shareholders are heavily handicapped in voting rights. The company has been formed to acquire two old-established brewing businesses. It is stated that a considerable export business is carried on. The net value of properties to be taken over is given as £203,618, while, according to the prospectus, which is not very clear on the point, the purchase price paid is £201,085. It is quite clear, however, that the whole of the assets have been mortgaged to the National Bank, Limited, for £160,000, and it is proposed to pay off out of this issue only £85,000. It would then appear that it is the intention of the directors to begin the business of the new undertaking with a substantial bank overdraft. The date of the valuation of property is not stated, but it must be assumed that it is on the basis of to-day's building cost. Past profits are not stated, which is rather curious in view of the fact that the companies are well established and stated to be "going concerns." Preliminary expenses are estimated at £14,000, including a sum of £6,000, "as a procuration fee in respect of the said loan or mortgage." Of this £6,000, £2,000 is payable in shares of the company. We presume this fee refers to the loan from the bank of £160,000. Be the future of the brewing industry what it may, we cannot find anything attractive about the issues.

Walton-on-Thames and Weybridge Gas Company, Incorporated 1869.—This is an issue at £95 per £100 of £10,000 7½ per cent. debenture stock, which will be redeemed at par on January 1, 1931. The net revenue of the company for the two half-years ended June 30, 1920, amounted to £2,260. Interest on existing mortgage bonds and debenture stock, including the present issue, amounts to £1,238. The net revenue for the year 1914 was £4,049. The prospectus states that "For many years, and down to December 31, 1918, the company paid dividends of 10 and 7 per cent. per annum on the A and B. ordinary shares." The issued share capital amounts to £50,266, and loan capital, exclusive of the present issue, is given as £12,200. The prospectus is a clear statement of affairs, and these debentures are well secured, both as regards capital and interest, but regard should be paid to the lock-up nature of the investment.

Trocadero Cinema (Leeds), Limited.—Authorised capital, £35,000, divided into ordinary shares of £1 each, of which 27,000 shares are now offered to the public at par. The company has been formed to acquire certain property and build a cinema theatre at Leeds. Promotion profits are £1,000, and preliminary expenses are estimated at £1,195. Cost of site, building, &c., is estimated at £35,000, but it is well to remember that in these days an estimate of building costs and actual building costs are two very different things. The issue is only suitable for those with a taste for speculative enterprise combined with personal knowledge of the ability of the directors, while the restricted market for such a small issue must also be remembered.

National Diamond Factories (Bernard Oppenheimer), Limited.—Letters of allotment in respect of the recent issue of 1,000,000 8 per cent. six-year convertible secure notes at par were posted on Monday.

Drake and Gorham, Limited, 10 per Cent. 7-Year Notes.—Letters of allotment and regret have been posted.

COMPANY MEETINGS, &c.

MEXICAN RAILWAY COMPANY, LIMITED.

RECONSTRUCTION WORK SINCE RETURN OF THE PROPERTY.

CHAIRMAN ON THE POLITICAL AND GENERAL CONDITIONS IN MEXICO.

The one hundred and eleventh ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 22nd instant, at River Plate House, Finsbury circus, London, Mr Vincent W. Yorke (chairman of the company) presiding.

The secretary (Mr C. Tennant) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The report and accounts which are in your hands, dealing as they do principally with the period anterior to the return of the property, need not, I think, occupy much of your time to-day. I would, however, again call your attention to the large figure standing to the debit of net revenue account, which had increased during the half-year from £695,426 to £805,000, and to the amount of deferred interest certificates, which had all but reached the amount of £1,000,000 sterling. They were then, at June 30th, only about £10,000 short of that figure, and at the end of this year will stand at about £1,100,010. As regards this interest, I may remind you that we have a moratorium which extends until January, 1922, for the 6 per cent. debentures, and until April, 1922, for the 4½ per cent. debentures, so that we still have some time in which to consider how this very large indebtedness can best be met.

THE AGREEMENT WITH THE GOVERNMENT.

As regards the agreement with the Government for compensation to the company, I have little that is new to tell you. The payment of the first instalment thereunder does not fall due until January next, so that we have not as yet reaped any benefit from it. It is satisfactory, however, to be able to inform you that the undertaking to grant freedom from Customs duties on imported materials has been carried out by the publication of an official decree to that effect. We have not as yet heard what steps, if any, have been taken to make the technical examination of the property called for by the agreement, but this is likely to prove a long and difficult process, and it is as yet too soon to hope for any agreement of the sum which may be due to us in respect of damages. We have now, as you know, been working the property uninterruptedly since June 19th last, so that it is possible to form some idea of what our earning power in the future is likely to be. On the whole, I must say that the results shown seem to be most encouraging. It has been a very difficult time for our management, as, when the property was returned, our locomotives and rolling-stock were found to be in a very sorry plight, and in every department of the railway it has been a question of making bricks without straw. In addition to this, there has been a succession of serious strikes, principally at Orizaba, where our shops are, and at Vera Cruz, the principal harbour of the country. The difficulties of working the railway, therefore, have been very serious, but in spite of that we have been able to keep running and show quite satisfactory results.

NET EARNINGS.

The net earnings for the period June 19th to September 30th last amount to $832,700, which though considerably below the earnings of the period of our greatest prosperity—1910-12—are about the same as our earnings for the three months July to September, 1914. You must bear in mind also that while the peso in 1910-12 was worth 24½d and in 1914 only 10d, to-day it is worth about 33d. Taken at this rate of exchange the earnings, based on the result of the three months to September 30th, give a sterling figure at the rate of about £450,000 per annum, which is very little worse than the figure shown during any one of the best years in the history of the company. For this, of course, exchange is largely responsible. Mexico to-day has a gold standard, and is using gold and silver only as currency, and a return to paper currency after the disastrous experience of paper money which the country has gone through seems highly improbable; so that, although I am fully aware how difficult it is to predict the course of exchange, it would seem quite possible that the present premium, which we enjoy owing to the fact that we take all our earnings in gold and silver, may continue for some time to come. As regards volume of traffic, we are in a favourable position to-day, as the companies with whom we compete are fully occupied in putting their properties in order and are not in a position either to seek for traffic or to carry it on any large scale. There is little doubt that the falling off in gross traffics which has set in for the last few weeks—I am glad to say the traffic return yesterday was considerably better—is directly attributable to labour troubles. I understand that they have resulted in a large accumulation of import traffic at Vera Cruz, and I think it is reasonable to look forward to an increased movement over the line in the immediate future. As regards the state of the property, I have little that is fresh to tell you. Our people have been too busy with all their difficulties to send us detailed reports. But I fear that the gloomy forecasts as to the amount of damage that would be found to have been done, which I have made from time to time, were not exaggerated, and that in every direction the work of reconstruction will be very heavy and very expensive. However, some good work has already been done, especially on the permanent way, which has resulted in a lessening of derailments, and hard work in the shops has provided, and kept in running order, quite a number of locomotives. As this work proceeds it will be possible to introduce improvements in train service, which at present compares unfavourably with the service given in old days. It is satisfactory to be able to tell you that every one of our branch lines is in service again, though the staff, owing to the stations in outlying places having been almost entirely destroyed, are working under great difficulties.

CONDITIONS IN MEXICO.

With regard to political and general conditions in Mexico, all accounts received point to an immense improvement in the last six months, and there can be no doubt that the whole country is in a far more settled state than at any time during the last ten years. There appear to be no organised forces in any part of the Republic operating against the present Government, and there have been, during the last six months, no disturbances of any sort, so far as I know, in the southern regions which our railway serves. Señor de la Huerta, who has been President ad interim since the downfall of Señor Carranza, carried out the duties of his office with much skill and discretion, and seems to have given satisfaction to all classes of the Mexican people. In an interesting address to Congress delivered on September 1st last he expressed the earnest intentions and desire of his Government to foster good relations with foreign Powers and to re-establish the credit of the country by resuming as soon as circumstances allow the payments of interest on the foreign debt. Señor de la Huerta has now been succeeded by General Obregon, the President duly elected under the law, who assumed office on the first day of this month. There is every reason for believing that General Obregon is well disposed towards foreigners who have interests in Mexico, and will do his utmost to deal justly with the many claims and grievances of foreigners which await settlement.

REPORT FROM THE MANAGER.

I will now read to you the latest cable received from the general manager: "Recent traffics affected by strikes Vera Cruz and Orizaba, which has left a large quantity of import traffic to move. Good local traffic still moving. Preparations for sowing active. Political conditions promising. General trade conditions immediate future not good, financial conditions in United States and fall in silver must affect business." Though he sounds a warning note in the last sentence, I read the cable to mean that our general manager takes a hopeful view of the immediate future of the business, and with that view I fully concur. I have been enormously encouraged by the good results which the working of the line has shown in spite of every conceivable difficulty during the few months that we have been in possession of the property, and, given stable conditions in Mexico, which is a country with greater power of recuperation than any other known to me, I look forward to even better results in the future. I think that you should know that it is my intention to pay a visit to the property immediately, and I hope to leave for Mexico before the end of next month. Mr Cater Scott, who is now at Havana, will also accompany me. We on the board have always been impressed with the importance of keeping in personal touch with the management, and at this particular time it is of great moment that we should have an opportunity of exchanging views with the new Mexican Government. The relations of this board with the Government have always been of the most most sympathetic character on both sides, and I am quite sure that the renewal of these personal relations, which have been interrupted necessarily for the last ten years, can only be a good thing for the company. The Chairman concluded: I now beg to move: "That the directors' report to the stockholders and the accounts and balance-sheet to June 30, 1920, be received and adopted."

Mr Henry Goschen seconded the motion, which was carried unanimously.

ANGLO-PERSIAN OIL COMPANY, LIMITED.

"A MOST SATISFACTORY REPORT."

MESOPOTAMIAN POLICY.

CHAIRMAN'S REPLY TO AMERICAN CRITICISM.

The eleventh ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held, on the 20th instant, at Winchester House, Old Broad street, London.

Sir Charles Greenway, Bart. (chairman of the company), presided.

The secretary (Mr F. Macindoe) read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen,—The statement you have before you is, I am pleased to say, again a most satisfactory one, and one which fully confirms the forecast which I made last year. Notwithstanding that the period covered by these accounts showed no very large increase in the throughput of our refinery, there is a substantial increase in profits, and for the current and succeeding years, as our various extensions come into operation, these will be very largely augmented.

BALANCE-SHEET ITEMS.

Dealing with the accounts, you will see from the balance-sheet that our capital and debenture stock issues, particulars of which are given in the report, have during the 12 months under review been increased by £8,675,000. This amount is being expended in developments of one kind and another, which will in due course be reflected by increased credits in our profit and loss account. The next item on the balance-sheet calling for remark is the amount due to the Persian Government in respect of royalties. I am pleased to say that after very protracted negotiations we have at last effected a settlement with the Persian Government in respect of our claim for losses sustained owing to the cutting of our pipe-line in 1915, and other outstanding questions. This settlement, though not as satisfactory as we were entitled to expect, is a matter of congratulation, because it removes all ground for dispute, and therefore consolidates the friendly relations which have always been maintained between ourselves and the Persian Government.

The next item to which I will draw your attention is the amount at credit of the employees' provident, pension, and insurance fund. This shows a very substantial increase on the previous year of about £100,000, and as it is the intention of the board to continue to contribute to it out of profits on a liberal scale, this fund, in effect, constitutes a profit-sharing scheme of a very attractive character. That it is much appreciated by the employees of the company is demonstrated by the fact that the fund now comprises some 3,059 members.

The only other item calling for remark on the debit side of the balance-sheet is that of the reserves. As you will see, our total reserves, including the £185,000 at credit of share premium account, now amount to £2,000,000, which I am sure you will agree is a very satisfactory amount, considering the short period which has elapsed since we arrived at a profit-earning stage.

On the credit side of the account all I need call your attention to is the amount of our realisable assets. You will see by adding the last four items together that these total about £8,370,000, whilst on the other side of the account the off-setting liabilities only amount to about £2,500,000, showing that we had surplus assets at the end of the last financial year amounting to nearly £6,000,000. These are, of course, being drawn upon from time to time by the capital outlay which is being incurred in connection with the various extensions to which I have referred, but, on the other hand, this is being met to a substantial extent by surplus revenue.

PROFIT AND LOSS ACCOUNT.

Dealing now with the profit and loss account, you will see that, although the gross profit amounted to £3,458,418 14s 6d, as compared with £2,287,624 13s 3d in the previous year, or an increase of nearly £1,200,000, the net profit only showed an increase of a little over £600,000. This considerable variation is almost entirely due to large increased payments for income-tax and royalty. In the appropriation account you will see that after debiting stamp duty and other expenses connected with the last new issue of capital, and carrying a largely increased sum to the credit of general reserve, the net balance at the credit of the profit and loss account amounts to £1,848,841 1s 10d, as compared with £735,527 19s 8d in the previous year. Out of this sum we have already paid the usual dividend of 6 per cent. per annum on the preference shares, and it is now proposed to declare a further participating dividend on the preference shares at the rate of 2 per cent. per annum and a dividend of 20 per cent. per annum on the ordinary shares, both less income-tax.

RETURN ON GOVERNMENT CAPITAL.

On previous occasions I have referred to the return which his Majesty's Government have been getting on the capital which they had invested in the company. I do not propose to go into figures, but I would like to point out that this return is not to be measured merely by the dividend which is now being declared on the ordinary shares. Directly, and indirectly, their return on the capital which up till a short time before the close of the financial year now under review represented their interest in the company, was far more than cent. per cent., and the new capital subscribed by them at the end of last year will in due course, no doubt, yield a proportionate return.

SCOTTISH OILS, LIMITED.

One or two of the extensions and developments to which I drew attention last year are already beginning to show their results. Among these I may mention "Scottish Oils, Limited," which, as a result of the economies effected by the amalgamation, and assisted also by the favourable markets which have obtained during the present year, is now making a fair profit, notwithstanding that since we took over the concerns the working expenses have in other directions been increased by no less than £700,000 per annum, owing to increased wages, shorter hours, and dearer coal. This early fulfilment of the anticipations expressed by me when I last addressed you is extremely gratifying to the board, and will, I am sure, be equally so to everyone interested in the preservation and development of our national industries. But it is doubtful if this favourable position can be long maintained, as there are already indications of a decline in the prices of sulphate of ammonia and of some of our other main products.

We are, however, in pursuance of what I indicated last year, arranging to largely extend the capacity of the Scottish refineries, with a view to increasing as far as practicable the output of shale oil, and at the same time refining Persian crude to such extent as shale oil may not be available, whereby the incidence of working costs will be largely reduced and the Scottish shale oil industry, we hope, be preserved from the extinction which otherwise would shortly inevitably overtake it.

SWANSEA REFINERY.

The other extensions and developments then referred to are in due course of execution, and will in time contribute largely to the company's profits. Of these I should refer to the refinery at Swansea. The completiton of this has been much retarded by the difficulties which are unfortunately now attendant upon all building and engineering operations in this country, but we hope to commence work there in the first half of next year. In this connection I should mention that we have made arrangements with the Asiatic Petroleum Company, whereby the benzine and kerosene produced at this refinery and in Scotland from Persian crude will be outside the operation of our contract for these products with that company, so that we shall, I am pleased to say, before long be in a position to market, through our subsidiary, the British Petroleum Company and the Scottish Oil Agency, the whole of the products obtained from these refineries.

INTEREST IN FRENCH COMPANY.

In the report we have drawn attention to further developments of the company's business. The first of these requiring comment is the interest which we have arranged to take in a French company. Attempts have been made in Parliament to throw doubt upon our wisdom in undertaking this development. In reply to these I need only say that the quantity of petroleum products which we shall shortly be in a position to market will be far in excess of the quantity that we can possibly dispose of in the United Kingdom. This being the case, there were only two alternatives before us, either (1) to create our own distributing organisations outside of the United Kingdom for the sale of these surplus products, or (2) to sell them to one or the other of the only two companies which are in a position to handle them, at such prices as they might be willing to pay. What this would mean is best gathered from the fact that were we now marketing ourselves the whole of our products our profits would be fully double what they are to-day.

Between these two alternatives there can be no question as to which was the proper course to pursue. And not only must we create our own distributing organisations in France, but also in such of the other Continental countries and elsewhere as are likely to offer satisfactory outlets for our surplus products.

This question of creating adequate distributing organisations is a matter which is engaging our constant attention. Producing and refining are only one side of the oil business. It is equally, or even more important to make such arrangements as may be necessary to enable us to sell our products to the best advantage, and no one would, I think, be bold enough to say that we should be doing our duty if we did not look well ahead and take these and all other steps necessary to avoid being forced to sell our surplus products to other oil companies on their own terms.

I should like in this connection to point out to the members of Parliament who from time to time ask questions in connection with this company in the House of Commons, that the commercial administration of the company is entirely a matter for the board, and that if members would care to address their inquiries to us, we shall always be pleased to give them any information in our power.

COMMONWEALTH OIL REFINERIES, LIMITED.

Another development of great importance is the interest we have acquired, in conjunction with the Commonwealth Government, in a company entitled the Commonwealth Oil Refineries, Limited, which has been formed with a capital of £500,000 for the purpose of establishing a refinery in Australia. The choice of title is not a very happy one, because it is reminiscent of a former well-known company which was established for the purpose of dealing with Australian shale, but in view of the large interest which the Commonwealth Government has taken in the concern, it was considered that a title indicative of their partnership in it was essential.

Until an internal supply of petroleum is available it is intended to import the crude oil required for the refinery, but it is hoped that the Dominions will, before long, be producing their own supplies of crude.

As you are probably aware, we have also undertaken on behalf of the Commonwealth and British Governments the examination and testing of the oil resources of New Guinea. The reports of our geologists on the area in Papua, on which for some years past the Commonwealth Government have been conducting test drilling, are, I am sorry to say, disappointing, but some other likely areas have been located, and test drilling on these will be started at once.

BRITISH OIL BUNKERING COMPANY, LIMITED.

Another new departure requiring explanation is the interest we have acquired in a company we have established under the title of the British Oil Bunkering Company, Limited. This, like the French company, is another necessary development of our business if it is to be carried on independently and our products be disposed of to the best advantage. In addition to the large quantity of fuel oil which we are now producing in Persia, and the still much larger quantity which we shall be producing in the near future, we are arranging for extensive supplies from various parts of the Western Hemisphere. To enable us to deal with these, we and our associated companies are arranging to establish bunkering installations in all the principal ports of the world. At the present time 19 of such installations are erected and in operation; 25 more are either in course of erection or sites and plant have been secured for them; and when our programme is completed the bunkering company will be in a position to supply fuel oil in every part of the world.

QUESTION OF OIL FUEL SUPPLIES.

Lord Pirrie, on his recent return from America, sounded notes of warning, first of all as to the wastefulness of burning liquid fuel under boilers for steam raising, and secondly, as to the danger to shipowners of building, or converting on a large scale, vessels to burn oil whether under boilers or in internal combustion engines, without first making sure of their supplies of oil. I fully endorse what Lord Pirrie said on those two points. But I would point out that there is no ground for pessimism as to future supplies of liquid fuel. The difficulty is that new supplies of oil cannot be opened up as quickly as supplies of coal, or as quickly as vessels can be built or converted. In the case of oil, not only have the fields to be located, but after they have been located a vast amount of work has to be done, and a vast amount of material and labour has to be provided, in the direction of drilling, laying pipelines, erection of storage tanks and refineries, and building of tankers to transport the oil to the points of consumption. The world's production of liquid fuel, after deducting what is consumed internally by refineries and on railways probably, available for sale outside of the countries of origin is to-day not more than 10,000,000 tons, but I see no reason to doubt that this will in the course of a few years, even reckoning only supplies from already proved fields, amount to fully 50,000,000 tons, or the equivalent for burning in Diesel engines of 175,000,000 tons of coal. But this, for the reasons I have given, will require time to put on the market, and meanwhile shipowners should, as Lord Pirrie recommends, go slowly, and make sure of their supplies in advance. Those who are first in the field for such oil as may be available will, however, have such an enormous advantage over those who remain dependent upon coal, that there are already very evident indications of a "scramble" for the existing supplies.

As regards the future course of the market it is difficult to prophesy, but so much of the price is made up of freight, which still for tankers stands at a very high level, that a decline on present prices may be regarded as a certainty whenever the supply of tanker tonnage approximates more nearly to the requirements of the trade. When this is likely to be shipowners themselves are able to judge as well as anyone.

QUALITY OF COMPANY'S PETROL.

Whilst on the subject of our products, I would like to say a few words about the quality of our petrol. It has been publicly stated by Sir Marcus Samuel that Persian petrol was almost useless for aviation purposes, whilst, on the other hand, the petrol of Sumatra and/or Borneo was an extraordinary spirit, possessing powers which no other petrol had. We have not considered it necessary to contradict this statement, or other misleading ones regarding the toluol contents of our oil, so long as our petrol was being marketed by Sir Marcus Samuel's companies, but now that we are about to market the Persian spirit under our own brands, the time has come to say that these statements are entirely without foundation, and to let it be known that the Air Ministry, after conducting exhaustive flight and chemical tests of our spirit, have submitted to us two long reports from the Air Research Department in which the following conclusions are arrived at:—

"(1) Persian Spirit No. 4 (Persian Aviation Spirit) is recommended for aeroplane engines, and it appears in all respects as satisfactory as Shell 'A' (Shell Aviation Spirit).

"(2) No alteration or adjustment to carburettors need be made when substituting one fuel for the other. It is considered that the fuel would be found quite satisfactory in service."

In view of the fact that we are now producing about 400,000 tons of Persian spirit per annum, and shall shortly be in a position to produce 700,000 to 800,000 tons per annum, this authoritative refutation of the misleading and damaging statements which have hitherto been made as to its quality is of great importance, not only to the company, but to petrol consumers generally all over the world.

PRODUCTION OF PERSIAN FIELDS.

As stated in the report, our fields in Persia still maintain their satisfactory rate of yield. The words "satisfactory rate" in the report should have been "extraordinary high rate," as used by me on former occasions, for the wells from which we are producing continue to yield and maintain their pressure in a perfectly marvellous manner. For instance, Well F7, to which I have frequently referred in former years, and which has been continuously flowing since November, 1911, is now giving a larger production than ever—maintaining a steady daily average of 11,000 barrels with the well only partly opened and with very little diminution in pressure. We have many other equally good or better wells, but meantime these cannot be opened out until our pipeline capacity is further increased. We have been gradually extending the limits of the already proved areas, and the results are most gratifying, and I can now more than ever confirm the opinion I have frequently expressed on former occasions as to the great richness and potentialities of our fields.

We have still no new fields in Persia to report, as our operations have again been considerably interfered with during the past 12 months by transport and other difficulties, but the testing of the areas previously referred to, as well as others since selected, is being carried on as actively as possible, and there is every reason for anticipating favourable results. As mentioned in the report, we are also carrying out geological examinations in various other parts of the world, and on some of the areas selected we have already started test drilling operations.

ADDITIONS TO COMPANY'S FLEET.

To meet our increasing transport requirements we have, since I last addressed you, arranged for further large additions to our fleet, and the total number of vessels which we and our associated companies now have afloat, building, or on order, is 110, with a dead-weight capacity of over 1,000,000 tons—a fleet which is, I believe, not equalled by that of any other company. It is needless to say that we have only entered upon this big programme of tanker construction at a time when building costs are so high after the most serious consideration and in full confidence that the step will not only be justified pecuniarily but is an absolutely necessary corollary of our other developments. Tankers are an essential part of our business, just as much as wells, pipelines, refineries, and distributing organisations. They have indeed been very aptly described by one of my colleagues as our "floating pipelines" to connect our fields and refineries with our distributing markets; and it would be folly for us to organise ourselves in the direction of production, refining, distribution, &c., for a trade of, say, 6,000,000 tons per annum, if we are only provided with tankers capable of transporting, say, 1,000,000 tons per annum. The high cost of the tankers

which we are now building will, however, be averaged down considerably by the low cost to which our present fleet has already been written down, and we also anticipate being able to write down the cost of the new boats very rapidly.

RELATIONS WITH PERSIA.

As indicated in the earlier part of my remarks, our relations with the Persian Government continue to be of a most cordial character. The disturbed conditions which have existed in Northern Persia and in Mesopotamia have in no way affected the work at our producing fields, which are, as you know, situated in Southern Persia, adjacent to the Persian Gulf, but they have to some extent interfered with the testing operations which we have been carrying on in the Persian territory bordering on Mesopotamia. The situation in Northern Persia is, as you all know, extremely critical at the moment, but I have every confidence that the Mejliss will shortly ratify the Anglo-Persian Agreement, and thus place its Government in a position to ward off the dangers now threatening that part of Persia.

MESOPOTAMIA CONTROVERSY.

As to Mesopotamia, you will no doubt have seen from the Press the controversy which is going on in regard to the oil rights which were acquired before the war by us and others from the Turkish Government. The United States have, it is much to be regretted, made a diplomatic question of this matter on the ground that the recognition of these rights would be introducing the policy of the "closed door" in Mesopotamia, in violation of the mandatory principle. The object of this agitation is apparent, but it is difficult for us in this country to conceive how such an obviously erroneous contention can receive the diplomatic support of the United States Government, and I feel that it is my duty, as well as that of every loyal British and American subject, to endeavour to dispel the cloud of misunderstanding which has been created around this subject by Press writers and others in order that the people of the two nations may have no doubt as to the real point at issue. This point is a very simple one indeed. It is a well-known doctrine of State succession that the Power which inherits alien territory must recognise previously acquired rights of private owners. The Standard Oil Company before the war claim to have acquired certain oil rights in Palestine which may, for all anyone knows to-day, be just as valuable as the Mesopotamian oil rights. Similarly, we and other nationals before the war acquired rights in Mesopotamia and in other parts of the former Turkish Empire. All of these rights will necessarily have to be recognised, to the extent of the non-enemy interests in them, by the administration, Arab or whatever else it may be, which eventually undertakes the Government of the mandated territories, unless, of course, the principles of Bolshevism are to be adopted in dealing with them. There is no question here of the "closed door" to America, but quite the contrary. If the Standard Oil Company's rights in Palestine are to be recognised—and I have seen no indication that they have any desire to abandon them—our rights, and the rights of other nationals other than enemy in the late Turkish Empire, must equally be recognised. To act otherwise would be to adopt the policy of the "closed door" in favour of America and against British and other national interests. This object is no doubt the one that the supporters of the agitation have in view in the strong opposition which they have, in this and other directions, set up against the attempts of this country to make itself less dependent upon foreign controlled concerns for its supplies of oil. But it is difficult to believe that the monopolistic aims which are at the back of this opposition can receive support from the American nation as a whole, or that these aims should for a moment be allowed to disturb the friendly relations between the two countries.

STANDARD OIL AND ANGLO-AMERICAN OIL POINTS OF VIEW.

I had a call from Mr Bedford, the head of the Standard Oil Company, on this subject a short time ago, on the eve of his departure to the United States, and on my explaining to him the misapprehension which existed on the American side as to the alleged "closed door" policy in Mesopotamia, I am pleased to say that he appeared to be quite satisfied and gave me an assurance that he would make it his first duty on arrival in America to endeavour to clear up the unfortunate misunderstanding which exists on this subject between the two countries, an assurance which I hope shortly to see fulfilled, because I am satisfied that Mr Bedford, who is a large-minded man, is himself well disposed towards this country, and would not for a moment support any policy of selfishness likely to cause disagreement between the two nations. I am very pleased to see that Mr Powell, the head of the Anglo-American Oil Company, the English branch of the "Standard," in a recent speech at Barrow also expressed the opinion that no one country could, of course, expect to monopolise the oil supplies of the world. With these authoritative expressions of opinion from two of the principal representatives of American oil interests, I think we may assume that the irritation which has, very regrettably, been aroused in America recently over this matter has no serious foundation, and that it will, like many other slight misunderstandings between the two countries, soon sink into the oblivion which it deserves.

Before I leave this subject I would like to refer to the pathetic account which was given recently in the Press of the enormous sacrifices which the United States had made in depleting itself—not without valuable consideration, be it remembered—of its reserves of oil for the welfare of the rest of the world. This was made the basis for claiming that American producers are entitled to their share in future oilfields outside of America as well as the enormous ones in the United States and elsewhere which they already hold. I am now wondering when we shall see similar demands put forward by the Bolshevists in regard to the oil supplied to other countries from Baku during the past 30 or 40 years and from the gold producers in South Africa and even from our own colliery proprietors for the gold and coal of which they have depleted themselves—for the welfare of the rest of the world! But I would like to point out that the drain on American reserves will be checked just as much, and in fact, a great deal more, if those outside territories are worked by British, French, or other nationals than they would be if worked by Americans. I need not go into the reasons for this; they are obvious. The only difference is that in the latter case America would still command its 80 per cent. to 85 per cent. of the oil supplies of the world, and the rest of the world be still left almost entirely dependent upon the present monopoly.

No one can reasonably object to American producers claiming a *fair* share of the world's supplies. But every other country in the world is entitled to object to their demanding a *permanent* 80 *to* 85 *per cent.* of the world's supplies, and to resent most strongly their opposition to the attempts of Great Britain and other countries to secure their fair share of these supplies, and one more nearly corresponding to their own requirements. To bring forward the mandatory principle in support of monopoly and of confiscation of acquired rights is to travesty all that the mandatory principle means, and the principles which, through the League of Nations, the rest of the world is endeavouring to establish!

TRIBUTE TO STAFF.

Before concluding I would like you to join with me in again expressing our great appreciation of the services of our staff. As regards our staff in Persia and Mesopotamia, I cannot do better than quote from a review recently presented to Parliament on the Civil Administration of Mesopotamia. The author, when writing of the services rendered by the company, adds that "the records of its (the company's) work is one of which all associated with it, as well as the distant oilfields on which it depends, may well be proud." But our operations now are not, as you know, confined only to Persia, but extend to this country, and to almost every other part of the world, and it gives me the greatest pleasure to say that in every direction our employees show the greatest possible loyalty and devotion to their duty. There is an intense feeling of pride among them all at being associated with a company which they know is carrying on a great national work, and which will one day be one of the greatest concerns in the British Empire. We have around us now, I can say without exaggeration, the finest band of workers, both in regard to scientific and technical knowledge and ability and in enthusiasm, possessed by any oil company in the world. The only trouble is that we cannot augment our staff of trained men as rapidly as we should like, owing to the hitherto inadequate facilities in this country for technical training in oil, but this is a difficulty which, by the endowments we have given to the Cambridge and Birmingham Universities, and by training men in our own fields, works and laboratories, will no doubt in time be overcome. Oil, as you know, is practically a new industry for the British Empire, and it is necessarily difficult to create at once the great number of geologists, field and refinery technicians, chemists, and other specialists required for the big developments which we and other British companies are now undertaking, particularly at a time when so much expansion in the oil industry is going on all over the world. But now that the matter of producing these specialists in adequate numbers has been taken energetically in hand, there is no doubt that this country will—as it has done in the past in every other branch of scientific and technical work—soon be able to hold its place against any other country in the world.

I now beg to move:—"That the report of the directors, the balance-sheet, and the profit and loss account for the year ended March 31, 1920, be received, approved, and adopted," and I will ask Lord Inchcape kindly to second this motion.

The Right Hon. Lord Inchcape formally seconded the motion.

The Chairman:—I shall be pleased now to answer any questions, and I may say that I have received a letter from one shareholder suggesting that the dividend on the preference shares should be increased to a fixed 8 per cent. Much as I should like to put forward this suggestion, I am afraid it is an impracticable one. As the preference shares of this company are really gilt-edged securities, it would be placing them altogether on a wrong basis were we to increase the dividend on them to the rate suggested.

SHAREHOLDERS' CRITICISMS.

Mr G. A. Christian said that, looking at the balance-sheet, he noticed that they had now £2,000,000 in War Loan, against £1,700,000 a year ago, and that their holding of British Treasury bills also ran to nearly £2,000,000. Of course, these were short-dated securities, but, personally, he thought it was regrettable, when every business man was satisfied that there ought to be Government retrenchment, a big financial corporation like this should have committed itself to fresh loans to the Government. All these loans to the Government, by being taken away from business interests, did harm to business interests, and encouraged the Government, he thought, in a policy which most people considered, even its own supporters, an extravagant policy.

Sir J. D. Rees, Bart., M.P., said that a question had been asked in Parliament which implied that the Anglo-Persian Oil Company had some, perhaps, undefined responsibility, at least to some extent, for the price of petrol in France. He would like to inquire of the chairman whether the company had any responsibility for the price of petrol in France, or, indeed, in the United Kingdom.

CHAIRMAN'S REPLY.

The Chairman, in reply to these and other questions, said he thought he could give an assurance that the company would not be investing any more of its funds in War Bonds. With regard to the question about petrol, the company had no control whatever over its price in this country or in France. All its petrol until 1922, except what would be produced later in Swansea and in Scotland, was sold, and meantime it would have no voice in regard to the price ruling in this country or elsewhere.

The motion was then carried unanimously.

The Chairman next proposed: "(1) That a participating dividend at the rate of 2 per cent. per annum, less income-tax, be paid on the preference shares in respect of the year ended March 31, 1920, and that such dividend be paid, together with the preference dividend at the rate of 6 per cent. per annum for the half-year ended on September 30th last, on January 31, 1921; and (2) that a dividend at the rate of 20 per cent. per annum, less income-tax, be paid on the ordinary shares in respect of the year ended March 31, 1920, and that such dividend be also paid on January 31, 1921."

Sir Edward H. Packe, K.B.E., seconded the resolution, which was unanimously approved.

ELECTION OF DIRECTORS.

The Chairman: Before proceeding to the business of the election of directors, I desire to express the great regret that we all feel at the death this year of our esteemed colleague, Mr James Hamilton. Mr Hamilton was, until his health began to fail some 12 or 18 months ago, one of the most active and useful members of our board. He always had unbounded faith in the enormous richness of the Persian Oilfields and in the great future which lay before this company, and his confidence, coupled with his great experience in oil matters, was much valued by all of us, and was of great service to the company. In his death we have suffered a severe loss, and I am sure you will all join with me in the expression of regret which I have voiced. My attention has recently been called to the fact that Mr Hamilton's death is the sixth out of the original members of the board who have passed away since the company was formed in 1909, leaving only three—Sir Hugh Barnes, Sir John Cargill, and myself—of the original members. The members no longer with us are Prince Francis of Teck, Lord Strathcona, Mr D'Arcy, Mr C. W. Wallace, Mr Garson, and now Mr Hamilton. This is a very heavy toll in such a short number of years, and it is somewhat painful to remember that so few of the men who first brought this company into existence have lived to see their anticipations as to its future so far advanced towards realisation. To fill the vacancy caused by his death we have elected Mr J. Douglas Stewart, the managing director of the British Tanker Company, whose energy and great knowledge of shipping matters have proved of immense service to the company. Under Clause 8 he now retires, and needs to be re-elected. Sir Hugh Barnes, Sir John Cargill,

The
ANGLO-SOUTH AMERICAN BANK Limited.
Capital & Reserves exceed £13,000,000.
Head Office:
62, Old Broad Street, London, E.C.2.
AFFILIATIONS:
THE BRITISH BANK OF SOUTH AMERICA LIMITED.
AND
THE COMMERCIAL BANK OF SPANISH AMERICA LIMITED.

and Lord Southborough retire by rotation, and offer themselves for re-election. The nature of the services of these gentlemen to the company is so well known that I am sure no words of mine are needed to ensure their unanimous re-election. I now beg to move:—"That the election of Mr J. Douglas Stewart to the board be confirmed, and that Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., Sir John Cargill, Bart., and the Right Hon. Lord Southborough, P.C., G.C.B., G.C.M.G., G.C.V.O., K.C.S.I., who retire by rotation and are eligible for re-election, be and are hereby re-elected members of the board."

Admiral Sir Edmond J. W. Slade, K.C.I.E., K.C.V.O. (vice-chairman), seconded the motion.

The Chairman said that, before putting the resolution, he might mention that the absence of Sir John Cargill was due to his being in Burma at the present time, while Mr Nichols, another member of the board, was in Persia.

The resolution was unanimously passed.

On the motion of Mr Arthur Flemming, seconded by Mr Sharpe, the auditors, Messrs Brown, Fleming and Murray, were re-appointed.

Sir J. D. Rees, Bart., M.P., proposed a cordial vote of thanks to Sir Charles Greenway, remarking that they all enjoyed his genial presence on these occasions. During a very eventful decade, including the past year, Sir Charles had been the guiding spirit of his distinguished board, and all the shareholders, he felt sure, were grateful to their chairman for the satisfactory account he had been able to place before them. Their chairman possessed a gift not always given to great statesmen or business men, of lucid exposition, and his speeches always made them feel proud to be participators to a larger or smaller extent in what was really a great Imperial enterprise.

Mr Sharpe seconded the vote, which was unanimously accorded.

The Chairman having briefly acknowledged the compliment, the proceedings terminated.

LONDON AND RIVER PLATE BANK, LIMITED.

SATISFACTORY YEAR—INCREASED PROFITS.

TRADE SIBILITIES IN SOUTH AMERICA.

The fifty-eighth ordinary meeting of the London and River Plate Bank, Limited, was held, on the 21st instant, at the head office, 7 Prince's street, London, Mr J. W. Beaumont Pease presiding.

The secretary Mr George R. Hutchinson) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, describing his recent visit to South America, said:

I had a most interesting and, I hope, useful time, and I think I am right in saying that this and similar visits are welcomed and appreciated not only by our staff, but also by our clients out there. I will not attempt to describe in detail the whole of my journey, but, owing to the kindness of everyone concerned, I was able in the comparatively short space of time at my command to visit a much greater extent of country, in the congenial companionship and with the kind assistance of my colleague, Mr Follett Holt, than I could otherwise have done, and in conditions of comfort and convenience unknown in this country. After touching at Lisbon, where we had the pleasure of seeing our manager in the temporary premises kindly placed at our disposal by the Tolades Company, and also our new premises, which we hope to enter next year, we sailed down the coast of Brazil, calling at Pernambuco, Bahia, Rio, and Santos, where we had the pleasure of seeing our managers and of talking to them, and, at most places, of going ashore to inspect the different premises, and of seeing our staff and the conditions in which they were working. I also went farther inland on the way back, and visited Sao Paulo, and saw the magnificent new property which we have lately acquired in the city. During our stay in South America we made Buenos Aires our headquarters, and at that great and flourishing city we had many opportunities of seeing our friends both in our central premises and in the suburban branches. From there we made several expeditions—first through Entre Rios to Uruguay, where we stayed at Monte Video, Paysandu, and Salto. Subsequently we travelled across the Continent, spending a few days at Mendoza, and after crossing to Chile, where we inspected our branches at Valparaiso and Santiago, we returned across the Andes to Buenos Aires, *viâ* Bahia Blanca. Our next expedition North gave us the opportunity of seeing our branch at Concordia, and subsequently our new branch at Asuncion, the capital of Paraguay. Our last journey, to Tucuman, took us up to Cordoba and Rosario. I was thus enabled to see a very considerable number of places, and I was much struck with the achievements already attained by these great countries, and with the vast possibilities in store for them in the future. They have all prospered exceedingly during the war, and their many resources have contributed largely to the success of the Allied cause.

SOUTH AMERICA'S IMPORTANCE TO ENGLISH TRADE.

I would like to impress on the commercial and trading community at home the importance of South American countries to our commercial interests. They offer a vast field for trading enterprise which can be worked to the mutual advantage of both sides. They have many things which are necessary for us, and we on our part can find with them a useful market for our manufactured goods. We must remember, however, that the eyes of traders in many parts of the world are centred on South America, and if we wish to retain and increase our trade in this continent we must exert ourselves with all energy. Owing to the war, we temporarily lost to some extent our markets in this part of the world, and with so much of Europe and other places now closed to our manufactures for one reason or another, South America ought to be an ever-increasing field for our operations. I am sure we start with many advantages: I heard nothing but praise concerning the quality of our goods and the probity of our dealings; but we have too many competitors for us to be able to reap the hoped-for reward unless we take all the necessary steps and use all our energies to secure it. Of the part which this bank has played in the development of trade between South America and our own country, and of its close identification with the countries in which it operates, I heard much gratifying comment. I can speak with the more emphasis on this point, as I have only recently been associated with this bank, and I offer my humble and grateful appreciation to those whose wise judgment and successful management have, through good times and bad, for many years worthily upheld the traditions of English probity and soundness, and raised this bank to a position second to none as regards these characteristics.

BRITISH TRADE METHODS.

I am not here, however, to preach pleasant things only, and I think it is right to record the fact that I did occasionally hear whispers that our methods were not incapable of improvement. It was hinted to me sometimes that we were almost too respectable, and that we were apt to turn a deaf ear to propositions to which a more adventurous bank might be willing to lend its sympathy. It was put to me in this way, that sometimes our answer to a proposal put before us was, "It does not interest us." I do not know whether this actual formula is often found in the conduct of our affairs. It may be thought to be an easy and non-committal way of refusing undesirable business, and I may say in passing that many of the criticisms which were mentioned to me in all good faith and in the most friendly manner, were based on our refusal to do business which certainly in my judgment did seem undesirable and not of a banking nature. But I want to tell our friends in South America that there is nothing in their business which does not interest us. There may be reasons in any particular case why we cannot entertain it, but it does and always will interest us, and we shall always be most anxious and willing, if possible, to assist in any business which a bank may legitimately entertain. I am only mentioning this because I wish to dispel any idea such as these criticisms seemed to suggest that we were not ready to keep up to date with modern ideas and modern methods. At the same time I want to emphasise the fact which every banker knows, that the first business of a bank is to look after the safety of its depositors. This maxim, as important now as it has ever been, shall always be our first consideration, and I heartily endorse the statement which I saw in that ably conducted paper *La Nación* at Buenos Aires, that the unduly high rates which were being quoted for deposits in some quarters were not a matter for congratulation to the community but of apprehension.

BALANCE-SHEET ITEMS.

Will you allow me for a moment to turn to our report and balance-sheet? The figures of our balance-sheet show a considerable and gratifying rise all round. Our capital has been increased, as was foreshadowed last year, to £2,040,000 by the capitalisation of a portion of our surplus profits. Our reserve is at the old figure of £2,100,000; our acceptances show an increase of about £1,000,000, and the same applies to the next item, which latter, as you will see is covered not only by the liability to the customers, but by the security of merchandise. Our loan and deposit account also shows an increase of about £1,000,000, and our bills for collection an increase of nearly £3,000,000. These figures, as stated in sterling, would have been still more increased in many cases if the rates of exchange had been the same as those ruling last year.

On the assets side of the balance-sheet our cash is roughly £3,000,000 less, and our bills discounted and advances, &c., £6,000,000 more, showing that we are taking our full share of the increased business in the countries where we operate. The bank premises account shows a considerable increase owing to recent purchases of new branches. Our increasing business and the difficulty of obtaining suitable accommodation is a problem which is not confined to South America. We must be adequately housed, and in order to obtain the necessary accommodation we have sometimes been obliged to purchase more than we actually required for the purposes of the bank. Reductions from the sale of surplus property are

anticipated during next year. One item has disappeared from our balance-sheet this year—namely, £40,340, under the heading "Bills receivable on London and the Continent, not yet liquidated in consequence of the war." This has been so much reduced that the comparatively insignificant remaining balance has been merged in the item of bills receivable, bills discounted, advances, &c.

THE DIVIDEND.

Our gross profit was £175,000 higher than last year, but this increase to a large extent was counterbalanced by increased expenses, and our available profit ultimately comes out at £25,000 more. Some of the expenses—to the extent of about £40,000—are of an exceptional and non-recurring nature, such, for example, as the cost of instalments in various new branches and the unusual amount of passage-money for long-deferred holidays. The final result is that we have, as the report shows, £854,140 1s 5d to deal with, and it is proposed to pay a dividend of 9 per cent., making, with the interim dividend paid in June last, a total distribution of 15 per cent. We are allocating £170,000 as provision for corporation tax, depreciation of securities, and other contingencies, and we are placing on one side £60,000 for bonus to the staff.

This brings me to another point, and I would like to say a special word in regard to the staff. They have been working now for some years under difficult and abnormal conditions. There were difficulties of a business kind arising out of the new conditions and problems created by the war, and there were difficulties of a personal and domestic nature, such as the rise in the cost of living, the shortage of houses, and the impossibility of arranging for the usual holidays. All these difficulties have been cheerfully met, and the staff have worked with a loyalty and consistency for which this bank owes them a debt of gratitude. It has been the wish of the directors to recognise these facts in a material way. The long leave holidays have been re-established, and we have agreed to pay full fares for return passages for our officials and their wives, making this arrangement retrospective as from the date of the armistice. We are sure that this will be received with satisfaction by the staff, and will facilitate the reunion of many of them with their families, so long delayed by causes over which we had no control. A special committee has been sitting on the question of salaries, and the staff may rest assured that we have done what we could to increase these. The board has also had under consideration the redrafting of the regulations governing our pension scheme. I found when I was in South America that there was some misunderstanding and ignorance and even anxiety on this point. The new regulations will, I hope, satisfy every member of the staff that he can look forward with confident expectations, if his record is good, to receiving a pension on terms which will be clearly stated in the printed regulations which will be circulated to every member of the staff.

FUTURE PROSPECTS.

With regard to business conditions as existing at present, and the prospects for the future, it is not easy to speak. For the last six months commerce has been going through a critical phase. This bank, in accordance with its well-established traditions, has been keeping a watchful eye on events, and, as you will see from its figures, is in a very strong position. We have placed a larger sum than usual to reserve for bad and doubtful debts, which is not disclosed in the published figures. The whole world is passing through difficult times, inevitable and foreseen after the recent convulsion of the Great War. These have been felt in South America, as elsewhere, but while she has no special features of trouble of her own which are not reflected in other parts of the world, she has had, on the other hand, many advantages during recent years which have been denied to those more actively concerned in the war. She has felt, in common with the rest of the world, difficulties arising from the sudden and severe drop in prices, and this meant additional care necessary in conducting all kinds of business; but she has abundant natural resources, and you will be able to see from the monthly report published by this bank that there are encouraging signs that these difficulties are being overcome. It is to be hoped that, with prices reduced substantially, extension of demand will not be slow in manifesting itself. By this time next year we trust we may be able to look back on a period of considerable progress in the direction of more normal times.

Sir Richard V. Vassar-Smith, Bt., D.L., seconded the resolution, which was carried unanimously.

The Chairman next proposed: "That a dividend of 9 per cent., less income-tax, be declared for the half-year ended September 30th last, out of the profits accrued to that date, payable on December 24, 1920."

The motion was seconded by Sir Richard Vassar-Smith, and carried unanimously.

On the motion of the Chairman, seconded by Mr Herman B. Sim, the retiring directors (Sir Richard Vassar-Smith, Mr Follett Holt, and Mr Kenneth Mathieson) were re-elected.

A vote of thanks to the managers and staffs, proposed by the Chairman and seconded by Mr Richard Foster, was carried unanimously, and the proceedings then terminated.

THE NATIONAL BANK OF SCOTLAND, LIMITED.

The annual general meeting of the proprietors of the National Bank of Scotland, Limited, was held, on the 23rd inst, in the bank's head office, his Grace the Duke of Montrose, K.T., governor of the bank, presiding.

After submitting the report, as published, his Grace said :—

As you will note by the balance-sheet now before you the bank has assisted, in no little degree, towards meeting the demands of customers, and, although the bank's funds to a large extent are still in Government securities, which the Treasury requested your directors to take up during the war, still we have been able to assist reasonably in financing industry to a considerable extent. Your board have carefully gone into every application which came before them, and have at all times considered in a liberal spirit legitimate proposals by customers for support for the furtherance of their business.

As regards the year's working the results on the whole have been satisfactory. The bank's deposits show an increase of £2,680,000 for the year, and stand at £36,973,000, as compared with £17,000,000 in July, 1914. The increase has been general at head office, and practically all the branches.

Turning to the assets side of the balance-sheet, the coin and money at call and short notice amount to £12,237,000, an increase of £2,114,000, as compared with last year, while British Government securities continue at practically the same, namely, £11,212,000. The investments in general securities show a decrease of £360,000—total holding now £342,536. Special provision has been made for depreciation on all investments, except in the case of Exchequer and National War Bonds maturing during the next five years, payable at par or at a premium, which, however, are also covered, apart from the reserve of £1,000,000. The bills discounted, £3,661,000, stand at £2,251,000 less than last year, but the advances to customers on cash, credit, and current accounts are increased by £4,300,000, which has been lent to manufacturers, merchants, and others for the purposes of financing their businesses.

The average Bank of England rate for the bank's year, 6.533 per cent., is the highest on record for the past 54 years. It was raised on April 15 to 7 per cent., having stood at 6 per cent. from November 8, 1919. The margin of profit over all, with the higher rates ruling, worked out at much the same as the previous year.

Looking at the profit and loss account you will note that the gross profit is £640,000, an increase of £47,000 over the previous year, but the charges of management at head office and branches, which included a bonus paid to the staff in July last, now stand at £345,000, an increase of £78,000 for the year, while the net profits, £295,310, show a decrease of £31,000 due to increased working expenses. After providing for payment of a dividend of 16 per cent., less income-tax, similar to last year, and making appropriations of £10,000 to property account, £15,000 to officers' pension fund, and £150,000 to investment reserve, there is a balance of £64,203 2s 11d carried forward to next year.

The report was adopted.

AMALGAMATED PRESS, LIMITED.

ANOTHER GOOD YEAR.

VALUE OF PRESS PUBLICATIONS AS ADVERTISING MEDIUMS.

The ordinary general meeting of the Amalgamated Press, Limited, was held, on the 23rd instant, at the Memorial Hall, Farringdon street, London, Sir George A. Sutton, Bart. (chairman of the company), presiding.

One of the joint secretaries (Mr J. R. Sumpter) having read the notice convening the meeting and the report of the auditors,

The Chairman said:

The balance-sheet which you have before you to-day is our twenty-fourth, and it is one, I think, upon which we may congratulate ourselves. There is one noteworthy point in it, to which I would like to refer, and that is the fact that the item of goodwill entirely disappears. For many years we have been gradually writing off this item of goodwill, and, needless to say, its disappearance makes the financial position of the company very strong indeed.

NET SALES.

When comparing figures of revenue, it should be remembered that the prices of most of our publications are now, owing to the cost of production, practically twice the pre-war prices. And I am glad to say that even at these increased prices our journals are doing well, the net sales exceeding 9,000,000 a week.

In view of the financial anxieties through which this country, and every other country, is passing to-day, we have reason to be pleased that the capital of our company has not been grossly inflated. For, with the slump in trade and burdensome taxation, the financial outlook is most obscure, and companies like ours, which have been run on such conservative financial lines, may confidently hope to weather the storm.

Among our latest publications are some of our most noteworthy successes. "Harmsworth's Universal Encyclopedia," which is being published fortnightly, and which, when completed, will form the most up-to-date encyclopedia in the English language, is an entirely new work from beginning to end, and the enduring success it has achieved is at once an indication of its value and of public appreciation.

In the early part of the year we absorbed the well-known and long popular publications of Messrs Henderson, of Red Lion court, and we hope that the journals thus acquired will form valuable additions to our business.

OUR PAPER MILLS.

You will be pleased to know that the Imperial Paper Mills—the second largest paper mills in this country—in which you have a controlling interest, are doing exceedingly well. During the year it was considered advisable to acquire timber limits for the supply of raw material essential to the paper mills, and a two-thirds interest was purchased in the well-known Gulf Pulp and Paper Company, situated in the Province of Quebec, Canada. My colleague, Mr. Linforth, the vice-chairman of the company, went to Canada last summer to carry through this transaction, which we believe to be a valuable and necessary acquisition to the company.

In this connection the Imperial Paper Mills made an issue of £800,000 (eight hundred thousand) 7½ per cent. 15-year debentures. The issue was highly successful, and, owing to the large number of subscriptions received, the lists had to be closed the day after they were opened, practically the whole of the issue being covered in the first day.

"ANSWERS" AND "HOME CHAT" NET SALES.

I am happy to be able to tell you that the advertisement revenue from your journals has shown a satisfactory increase, entirely eclipsing all previous years. While this is, in part, due to increases in the rates charged for advertisements, fortunately it can be attributed in far larger measure to the ever-growing popularity and increasing influence of the Amalgamated Press publications.

There are two factors that make periodicals valuable to advertisers :—(1) Their net sales, and (2) the nature of the public to which they appeal. Touching the first, you may know that we have already published the net sales of all your publications that carry advertisements. In the cases of *Answers, Home Chat, Picture Show, Woman's Weekly, Woman's World* (and others which I do not mention), advertisers using such journals will note with interest that none of our imitators have yet published *their* net sales of *similar* papers. From this fact alone we may infer (I have no doubt of it myself) that the journals I have just mentioned are pre-eminent in their respective fields.

RANGE AND INFLUENCE OF AMALGAMATED PRESS PUBLICATIONS.

As regards the second factor in advertising values, no other publishing house in this country can offer to advertisers so wide a range of papers appealing to women and girls as the Amalgamated Press publications. Taken together, your women's weekly papers, girls' weekly papers, and the fashion monthlies, constitute the greatest publicity machine of its kind in Great Britain. A typical instance of their value to the advertiser may be mentioned. An agent recently placed an advertisement costing £50 in one only of your women's papers, and his client received no fewer than 8,000 replies!

The "pulling power" of our general publications is amply shown, not only by the great volume of advertising they carry, but by the size of individual contracts placed with us, and the fact that such contracts are renewed again and again.

Where all our publications have rendered such splendid service to advertisers, it is difficult to select any for special mention, but it should be said that *Answers* and the *London Magazine* have never been stronger, nor can I resist another word on the great popularity of *Home Chat*. We try to limit the advertisement space in that paper to 16 pages, but so great is the demand that we are constantly compelled to carry 23 pages of advertisements in order to accommodate our advertising friends.

CHILDREN'S DRESS.

The past year has seen the publication of another Amalgamated Press fashion paper, *Children's Dress*, and I am pleased to be able to tell you that, although it has only been in existence a few months, it is already in strong favour with advertisers.

Fashions for All and *Home Fashions* have consistently carried a large volume of advertising throughout the year. So, with the addition of *Children's Dress*, where we had a pair of well-known papers, we have now a trio of immense value to advertisers of women's commodities, especially textiles.

POSSIBLE INCREASE OF ADVERTISEMENT RATES.

It is possible that, in respect of some of our publications, increases in the advertisement rates may have to be made during the coming year. In case this happens, I should like to assure advertisers now that such increases will be imposed solely to meet unavoidable increases in the cost of producing the journals concerned.

HIGH PRODUCTION COSTS.

Despite the satisfactory results of our year's business, the period under review has been a difficult one in many respects, but I need only specify the high prices of materials of all kinds, required in the making of magazines and periodicals, and the substantial increases in wages. As was pointed out in the directors' report, these charges at the present time show no signs of diminishing, and to a certain extent this may prevent our floating new publications as freely as we have been in the habit of doing since it is obvious that we cannot issue new journals unless there is a sufficient margin of profit, anxious as we are to increase our staff, and the number of our publications.

In this connection it will be recalled that I mentioned last year our project of erecting an entirely new printing works on land purchased for the purpose. I am afraid this building will not be ready as early as we had anticipated, because, on account of the heavy costs of materials and wages, to which I have referred, we have to go more slowly than we had intended. But as soon as conditions prove favourable, we shall hasten on that work.

NEW DIRECTORS.

I have to ask your confirmation of the appointment to the board of Mr Harold Garrish and Mr. Leslie Clark. Mr Garrish joined the firm in 1893. He has done valuable work for us, and has earned his directorship.

The same may be said of Mr Leslie Clark, although he did not join the firm until a later date—1908.

In conclusion, I believe that, whatever vicissitudes publishing businesses may yet have to pass through, owing to the abnormal costs of production (which I hope may stabilise themselves before long), this business is as capable of successfully withstanding any adverse factors as it proved during the anxious period from 1914 to 1918, and subsequent to the Armistice.

I now move: "That the report of the directors, produced, together with the annexed statement of the company's accounts at October 31, 1920, be received, approved, and adopted, and that a final dividend for the year of 5s per share, free of income-tax, be now declared on the ordinary shares. I will ask Mr Linforth to second the resolution.

Mr Arthur E. Linforth, vice-chairman, seconded the resolution, which, in the absence of comment, was put to the meeting and carried unanimously.

The Chairman: I now propose that the election of Mr H. J. Garrish and Mr Leslie K. Clark to the board of directors be, and is hereby, confirmed.

The resolution was seconded by Brigadier-General Wm. F. Mildren, C.B., C.M.G., D.S.O., and unanimously agreed to.

On the motion of Mr Steele, seconded by Mr Hartley Aspden, Messrs Turquand, Youngs, and Co., and E. Layton Bennett, Sons, and Co. were reappointed auditors.

Mr E. Layton Bennett: Before we leave the meeting I should like to propose a very hearty vote of thanks to the chairman and the board for the admirable manner in which they have conducted the affairs of this company throughout a very troublesome time. I do not think there is any company in the City of London that can claim more credit than this company, that in spite of the very heavy charges, including paper, they have shown the best results that they have ever had to show to the shareholders.

Mr Mayell seconded the resolution, and the vote was unanimously accorded.

The Chairman: Ladies and gentlemen, on behalf of my colleagues I thank you for your vote of hearty congratulation; I can only promise you the same undivided attention to the interests of the business of the coming year as has been devoted to it in the past.

The proceedings then terminated.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, *3 Arundel street, Strand, London, W.C. 2.*

STOLL PICTURE THEATRE (KINGSWAY), LIMITED.

HIGHLY SATISFACTORY RESULTS—DIVIDEND OF 20 PER CENT.

The first ordinary general meeting of the Stoll Picture Palace (Kingsway), Limited, was held at the Stoll Picture Palace, Kingsway, London, on the 22nd instant, when Sir Oswald Stoll (Chairman and managing director) presided.

In moving the adoption of the report and accounts, the Chairman said: I rise to move the adoption of the report and accounts, which I assume may be taken as read. The board has been congratulated on the balance-sheet and the business for the year. This business, although it was highly satisfactory, was somewhat prejudiced by the carrying out of certain structural alterations, which occupied considerable time and interfered with the smooth running of the theatre. Nevertheless, we have no reason to cavil at the result of the year's trading. When the resources of the company are in full operation, however, ever better results may be hoped for. When the company was formed we provided £60,000 for extending our business over the unused part of our property. We had in view the construction of a restaurant. This, however, we have not been able to carry out. The plans were duly prepared and passed, but when we came to the question of the full licence essential to a properly equipped restaurant of that importance, we were granted only a wine and beer licence. As this would have seriously handicapped our service as compared with that of other important restaurants like the Holborn and the Trocadero, we decided that the handicap would convert the scheme into a mere speculation upon which we had no right to risk £60,000. We have determined, instead, to build a Bijou Picture Theatre with 1,000 seats, all of which will be bookable in advance at any of the three sessions daily.

Connected with the theatre there will be an extensive café. We hope to be able to proceed with that scheme as soon as the plan for producing unemployment by restrictions upon building has been abandoned by the authorities. We are proud that our undertaking is proving so valuable and prosperous. However gloomy the outlook elsewhere may be, we feel that in this theatre we shall have an exception to the rule. Our theatre is a property which for many years turned upon the wheel of ill-fortune, but now it is running on wheels of good fortune. The property appears to have been all right and to have required only the right kind of policy in order to come into its own. This theatre in that respect reminds one of the country now. The country is all right too. It only required the right kind of policy in industry and finance in order to dissipate the clouds that overhang it. Early in the career of the War Seal Foundation, an organisation for properly housing disabled service men, I was met by people who thought that sorely wounded men, regardless of the nature of their wounds, were "better dead." These people thus callous in regard to human life and human relationships and sympathies, I invariably found did not agree with my views on industrial finance. Their arguments were the same as those now used to support a policy which unconsciously says the same thing of our wounded industry and finance—namely, "Better dead." It is to be hoped for the sake of our business and of all business that men in power trusted by the people will not allow such a policy to prevail. Many who support that policy do so in the belief that it is the kind of policy that saved the country after the Napoleonic wars. That belief, however, is quite mistaken. The country was saved at that time by two things—one being the Recoinage Act of 1816, and the other the application of steam and steam power, steam railways and steam ships which did not slow down, but speeded up trade of every kind, made England the first manufacturing country in the world, and enabled us to save not only ourselves, but Europe and probably the new American Republic besides. I beg formally to move:—That the directors' report, balance-sheet, and profit and loss account for the year ending November 3, 1920, be approved and adopted, including the payment of the preference dividends to September 30th last and the interim dividend on the ordinary shares, together £18,862 13s 8d, and that the balance of £40,580 15s 8d at the credit of profit and loss account be dealt with as follows: (1) That the sum of £5,000 be applied in writing off the underwriting commission paid on the issue of the debenture stock. (2) That a final dividend be paid on the ordinary shares at the rate of 25 per cent. per annum (less income-tax), calculated from dates instalments paid, absorbing £12,532 11s 6d, which, with the interim dividend, makes the rate for the year 20 per cent. (less tax). (3) That the balance of £23,048 4s 2d be carried forward to next year, subject to excess profits duty, corporation profits tax, tax on final dividend, and managing director's remuneration.

Sir James McCraith seconded the motion, which was carried unanimously.

On the motion of the Chairman, the appointment of Alderman H. E. Davis and Mr W. S. Gordon Michie as directors was confirmed.

Mr Evans, in moving the re-election of the auditors, congratu-

lated Sir Oswald Stoll on the success of this company. They were greatly indebted to Sir Oswald Stoll for the manner in which he had conducted the affairs, and especially in paying such a dividend the first year of their existence.

ASAHAN RUBBER ESTATES, LIMITED.

GOOD RESULTS OF YEAR'S TRADING.

The eighth ordinary general meeting of the Asahan Rubber Estates, Limited, was held, on the 20th instant, at the registered office of the company, 1-4, Great Tower street, London, Mr C. H Clark presiding.

The Chairman, in the course of his speech, said: Gentlemen,—I am asked to preside at this meeting owing to the illness of our chairman, Mr George Croll. The net book cost per acre of the 2,634 acres planted at July 31st last was £45 7s 10d. In arriving at that cost no account is taken of the valuable reserve land of 5,707 acres belonging to the company. The crop harvested during the year was 840,100 lbs, against an estimate of 780,000 lbs, and a previous year's total of 537,287 lbs. The crop was harvested from an average bearing area of 2,464 acres, rather more than 90 per cent. of the total planted area. The average yield obtained was at the rate of 341 lbs per acre. The average number of trees in tapping was 206,322, as against 127,360 last year, and the average yield per tree 4.06 lbs, against 4.21 lbs. The cost of production f.o.b. at port of shipment, including provision for commission to staff, depreciation, &c., but excluding loss on exchange, was 1s 0.58d per pound, as against 11.14d per pound for the previous year. Including the estimated value of the unsold portion, the crop realised a net average price of 1s 11.22d per pound, against last year's figure of 1s 8.59d per pound. At the time of his last visit to the estate the visiting agent reports it as being in first-class condition. The manager estimates the crop for the current year at 875,000 lbs, but this will be subject to reduction by 25 per cent. as from November 1st last in conformity with the scheme for restriction recommended by the Rubber Growers' Association, which became operative on that date. The board consented to the proposal to restrict output, being satisfied that it was necessary in existing circumstances. Out of the current year's crop 73,920 lbs have been sold under contract at an average net price of 1s 10¼d per pound. The net profit for the year amounted to £29,798 13s 8d, to which falls to be added the unappropriated profit brought forward from last year of £3,025 0s 11d, making together the sum of £32,823 14s 7d to be dealt with to-day. We propose that a dividend of 10 per cent., less income-tax, be paid, and after providing for the additional remuneration payable to the directors under the articles of association, we have remaining the balance of £20,759 1s 5d to be carried forward. The directors feel sure you will agree that the conservative course they have thought it right to follow in distribution of profits at the present time is in the best interests of the shareholders, having regard to the uncertain outlook of the immediate future.

The report was unanimously adopted.

† Rates lowered ½% on Jan. 2, 1918, and lowered ½% on Feb. 14, 1918, but raised ½% on Oct. 6, 1919, and ½% on Nov. 6, 1919, and 1% to 5% on April 15, 1920.
‖ Lowered from 3¼% to 3% on June 5, 1918, but was raised to 3¼% on July 31, 1919, to 3⅜% on Oct. 6, 1919, to 4¼% on Nov. 6, 1919, and 5¼% on April 15, 1920.
* Changed from 4⅜% to 4% on Dec. 27, 1917, and from 4% to 3½% on Feb. 14, 1918, at which rate they remained until they were suspended on May 31, 1919. Daily sales resumed on July 14, 1919, when two months' bills were also introduced. The daily sales of two months' bills were stopped on August 15, 1919. Rates commenced on July 14, 1919, as follows:—Two months, 3⅜% (July 14 to August 5, 1919, period of daily sales); three months, 3½%; six months, 4%. On October, 6, 1919, the three months' Treasury bill rate was raised 1% to 4½%, and six months 1% to 5%. On November 7, 1919, the three months' rate was raised from 4½% to 5½%, and the six months' rate from 5% to 5½%. On March 19, 1920, daily sales of six months' Treasury bills at 5½% were replaced by twelve months' Treasury bills at 5½%. On April 14, 1920, three and twelve months' Treasury bill rates were raised from 5½% to 6½%. Sales of twelve months' Treasury bills were suspended on April 29, 1920.

The Key to Security

IT is not possible to remove the key from THE CHATWOOD SAFE unless it is locked, so you may be content that if you have the key of your Safe in your possession you know the Safe is locked and, consequently, secure.

THE CHATWOOD double-bitted and double-bolted Lock provides yet another instance of the care, forethought and ingenuity which (for over 60 years) have resulted in THE CHATWOOD SAFE providing a greater degree of security than any other made.

This Lock possesses no fewer than 12 separate levers, operated in opposite directions alternately by the special key illustrated. It is absolutely impossible to pick this lock, neither is it possible to make a duplicate key from a wax impression.

Additional security is provided by THE CHATWOOD Single Combination Letter Lock which can be set to any combination of 3 letters. Once the door is locked it cannot again be opened until this combination has been correctly made.

The locking of the door causes an undrillable steel shield to cover the keyhole which effectively prevents the insertion of explosives or the fraudulent use of duplicate keys.

Fire Proof Since 1858. **THE CHATWOOD SAFE** *Burglar Proof Since 1858.*

Belgium	38	Other countries	1,145
Gold Coast	36,506		
British South Africa	771,511		
Total value of imports of gold	808,855	Total declared value of exports registered in the week	3,454,875

Messrs Samuel Montagu and Co. write on December 23rd as follows :—

GOLD.

The Bank of England gold reserve against its note issue is £125,974,080, an increase of £951,505 as compared with last week. A fair amount of gold came into the market this week, and was all taken for New York. It is reported from New York that $6,000,000 in gold has been received from London

and $300,000 in gold from Sweden. The following were the United Kingdom imports and exports of gold during the month of November, 1920:—Imports, £9,528,366; exports, £4,714,150.

SILVER.

The market has been very unstable, being subject to powerful influences, arising from speculations connected with the Chinese exchanges. On some days the business has been quite on a large scale, on others the volume has been almost insignificant. In these circumstances, erratic movements have naturally taken place, and the immediate future of prices has been befogged. Looking more to the horizon, the view seems clearer. Collapse of world prices and the jettisoning of stocks, especially in the United States, do not encourage a hope that silver will be immune from the almost universal *débâcle* in values. The size of the stock of silver in Shanghai is worthy of notice. This time last year, with the tael at 4s, the amount was, roughly, 18,860,000 ounces; this week, with the tael at 3s 11½d, the total is, roughly, 55,700,000 ounces, or just about three times as much.

INDIAN CURRENCY RETURNS.
(In Lacs of Rupees.)

	Nov. 30, 1920.	Dec. 7, 1920.	Dec. 15, 1920.
Notes in circulation	16,021	16,024	16,062

Gold coin and bullion out of India	..	..	..
Securities (Indian Government)	6,807	6,807	6,807
Securities (British Government)	835	835	835

No rupees were coined during the week ending 15th inst. The stock in Shanghai on the 18th inst. consisted of about 36,000,000 ounces in sycee, 27,000,000 dollars, and 700 bars of silver, as compared with about 35,500,000 ounces in sycee, 26,500,000 dollars, and 1,700 bars of silver on the 11th inst. The Shanghai exchange is quotel at 3s 11½d the tael.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

1920.	Gold. Per Ounce.	Silver. Cash, Per Ounce.	Silver. Forward, Per Ounce.	Date.	Silver. Cash, Per Ounce.

Reports and Notices.

Mr Leroy Sinclair has joined the board of the General Re-insurance Company, Limited, as deputy-chairman. Mr Leroy Sinclair was formerly foreign manager of the North British and Mercantile Insurance Company, Limited, and is now a partner in the firm of Messrs Middleton and Cater, re-insurance brokers.

Algar's advertising offices have been removed to 58 Gracechurch street, during the rebuilding of 11 and 12 Clement's lane.

The directors of the Motor Union Insurance Company, Limited, United British Insurance Company, Limited, and British Commonwealth Insurance Company, Limited, have appointed Mr W. Fielder Duffin as marine underwriter as from January 1, 1921. Mr Duffin has been associated with these companies as deputy marine underwriter for several years.

Mr Wilfrid W. White has been elected chairman of Tariff Reinsurances, Limited, for the ensuing year, in succession to Mr S. Walter Morris.

The directors of the Fine Cotton Spinners' and Doublers' Association, Limited, have unanimously elected Mr John W. McConnel to be chairman, in succession to the late Sir A. Herbert Dixon, Bart.

Lt. Col. A. F. H. S. Simpson, C.M G., R.E. (retd.)—late Director of Wireless, Indian Government –has been appointed to a seat on the boards of Marconi's Wireless Telegraph Company, Limited, and the Marconi International Marine Communication Company, Limited. He has also been appointed a joint general manager of both companies, in addition to the present joint general managers—Mr H. W. Allen, F.C.I.S., and Mr. W. W. Bradfield, C.B.E.

The board of directors of the South Indian Railway Company, at their meeting on the 20th inst., appointed Mr A. Muirhead, C.I.E., managing director, in place of the late Mr Neville Priestley.

Colonel F. G. Oldham, having resigned his seat on the board of the Nitrate Railways Company, Limited, Mr A. W. Bolden has been elected in his place.

Mr H. W. Sillem has to-day resigned from the directorate of the English Beet Sugar Corporation, Limited.

The vacancy on the committee in London of the Imperial Ottoman Bank, caused by the death of the late Earl of Bessborough, has been filled by the nomination of the present Earl of Bessborough, formerly Viscount Duncannon. The Viscount Goschen has been elected to the vacant chairmanship.

GOVERNMENT STOCKS, &c.

VENEZUELA (3 PER CENT. DIPLOMATIC DEBT).—The Council of Foreign Bondholders notify the receipt of a sight draft for £17,563 1s 6d, being the moiety of the balance of the debt service payable to the Council in respect of the half-year ending December 31, 1920.

BANKS.

ULSTER BANK, LIMITED.—The report for the year ended November 30th shows a new profit of £210,306, which with the balance of £103,875 brought forward, makes an available total of £314,181. The dividend of 21¼ per cent. absorbs £74,375, £40,000 has been appropriated to officers' superannuation fund, and £93,000 to depreciation of investments, leaving £106,806 to be carried forward. Deposits stand in the balance sheet at £24,800,892. A large number of agencies have been "temporarily closed, owing to the present disturbed state of the country."

IMPERIAL BANK OF PERSIA.—The profits for the year ended September 20th amounted to £80,242, making, with the balance brought forward, a total of £108,051, from which is deducted £4,000 due to the Persian Government. A sum of £30,000 has been transferred to reserve and £5,000 to bank premises. After payment of a final dividend of 5s per share, making 8s per share, free of income-tax for the year, a balance of £29,051 is carried forward. The balance sheet shows deposits of £3,228,336, and bills payable,&c., £3,378,404.

MISCELLANEOUS.

ENGLISH RAILWAY STOCKHOLDERS' PROTECTION ASSOCIATION.—The first meeting of the English Railway Stockholders' Protection Association was held on December 17th at the Central Hall, Westminster, when a resolution was unanimously carried generally approving the financial proposals made on behalf of the railway companies in the letter recently addressed to Sir Eric Geddes by Viscount Churchill, but suggesting that the "1913 net receipts" should not be treated as the limit of the Govenment's guarantee, and should be regarded as the minimum, pending the final settlement of accounts.

SCOTTISH PAPER MILL COMBINE.—It is announced that Caldwells Paper Mill Company, Limited, has purchased the whole of the assets and undertaking of the Inveresk Paper Company, the price paid being £375,000. Caldwells, Limited, was formed early this year to acquire the business of Caldwell and Company, paper makers, of Inverkeithing, near Rosyth, in Fifeshire, and has an issued capital of £300,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday Evening.

Cold, seasonable weather has prevailed during the past week, and which should improve the condition of home-grown wheat. Trade as usual at this advanced period of the year proved very quiet, offerings of native wheat being quite adequate for passing requirements, and prices range from 80s to 85s per qr of 504 lbs. Imported descriptions also moved off slowly at recent revised official rates. Reports of the new crops in the Southern Hemisphere are very satisfactory, harvesting operations in the Argentine resulting in excellent yields, both as regards quantity and quality. Australian prospects are maintained, recent damage by adverse weather being fortunately less serious than at first reported, so that final results from the Commonwealth should show a large surplus for export, a liberal quantity having already been sold. Apart from these crops, the final estimate of the United States crop is 39,000,000 bushels in excess of previous forecast. The demand for flour continues restricted, while official prices were reduced by 1s per sack for both home milled and imported. G.R. grade now stands at 81s per sack, ex mill, and imported descriptions range from 76s 9d to 88s per 280 lbs, ex store, as to quality. Shipments from America were on a lighter scale, the greater proportion being again on Continental account. Maize opened dull and easier, but subsequently prices improved, in sympathy with forward firmness. Plate, ex ship, quoted 56s 6d, and ditto, landed, 58s 6d, Galloxanian 60s, and white African 62s, landed, per 480 lbs. In the forward section, cargoes were neglected, while parcels displayed considerable irregularity, though firmer on balance. Plate, December-January, sold up to 49s 6d and 48s 9d, January-February 49s to 48s 6d per 480 lbs. Oats continue to meet a quiet sale, and prices ruled easier. English ranges from 46s to 52s per 336 lbs; black Irish, 40s; Plate, 41s; No. 3 Canada Western, 43s 6d, landed, per 320 lbs. Only moderate sales occurred in Plate parcels on c.i.f. terms at declining prices, new crop, January-February, selling down to 31s 3d. Barley trade slow. English malting quoted 60s to 100s; grinding sorts, 50s to 65s; Californian ex ship, 78s to 79s; Australian, 85s to 93s, ex ship; Morocco, landed, 73s to 80s per 448 lbs. American malting (48 lbs), 63s, landed; and Canada feed, 52s, ex ship, per 400 lbs. Forward business restricted, and values easy. Beans in poor request. English new winter, 68s to 72s per 532 lbs. Peas quiet. English maples, 82s to 105s; Dunns, 70s to 75s per 504 lbs. Japanese new 28s, Tasmanian blue 23s cwt. Oatmeal dull, at late rates. Lentils quiet. No. 1 split, 46s; No. 2, 42s 6d per 100 lbs. Homeward grain freights continue weak, and chartering business limited, while chiefly on Continental account. From the River Plate, up-river loading to U.K./Continent, December-January, fixed at 37s 6d, February 45s, and lower ports, February, 40s per ton. From the United States business was effected at 7s 6d to U.K./Bordeaux/Hamburg Range, with 8s 6d respectively Gulf loading and 10s quoted Mediterranean. India dull. Bombay on dead weight nominally 45s to 47s 6d, while Karachi chartered wheat at 41s 3d scale basis to U.K./Continent. Australia dull at 90s to 95s for heavy grain to U.K., with options. Other departments remain dull and weak.

Save Money on Your Household Insurances.
For the low and inclusive premium of **5s. per £100 per annum** (minimum premium 7s. 6d.) the
"ALL-IN" POLICY
covers practically every serious risk to which the Householder is liable. Full particulars and list of the many and varied risks covered can be obtained on application to the:—"All-In" Policy Department.

THE IRON AND COAL TRADES.

Our Sheffield correspondent writes on Wednesday as follows:—The intensity of the depression in the steel trade is seen in the fact that several works closed for the Christmas holidays at the beginning of the week and the general arrangements for a lengthy stoppage. The re-starting will depend upon the receipt of orders. Hardly any of the works will re-open, however, before well on in the New Year, and it may be later in a number of instances. Nothing favourable can be reported of the situation, as nothing has happened this week to relieve the depressing outlook. Prices continue to fall in both iron and steel, but no one anticipates a recurrence of pre-war levels, or anything approximating them; nor are the reductions sufficient to compete with Continental material. The few orders offering for billets, wire rods, bar iron, and steel and wire are usually booked by Belgium, Germany, and France, all three of which countries are quoting extremely low prices. British common pig-iron has dropped £1 on the week, and bars and sheets £2. Trade in expensive tool steels is quite dead. The acid open hearth plants are working on old orders. There have been further cancellations of contracts for steel material this week, so that makers are shutting down for the holidays with empty order-books. The foundries, however, are moderately employed, and numerous descriptions of mechanics' tools are in request. The heavy engineering shops have plenty to do on the construction of plant for iron and steel works. The reduced consumption in most of the large industries, coupled with an increasing output and the restriction of exports, is causing a glut of fuels. The export trade, however, is to be revived, and sellers are asking more reasonable rates than have been current lately. For instance, best Tyne steams, which most of the year have stood at 150s f.o.b. to neutrals, are now being quoted at 95s f.o.b. The reduction should re-open business with Scandinavia. Railway and gas companies are taking advantage of the abundant supplies to build up reserve stocks. Prices are the same as last week.

COMPLETE BANKING SERVICE

LONDON OFFICE: 53, CORNHILL.

J. B. Donnelly, D.S.O., *Manager.*

Our Glasgow correspondent writes:—Owing to the approaching holidays, which here have more of a New Year than a Christmas association, business this week in steel and iron, indeed in all metals and their manufactures, has been almost at a stand. Industrial affairs have proceeded much as usual, with, however, slackening efforts in not a few instances. It is expected that labour will generally knock off on Thursday afternoon of next week, and there will be no pronounced resumption until well on in January. Some places will shut down for the month, but most of the shipyards and steel works, as well as engineering shops, will probably resume in a fortnight. It is reported in some quarters that as a result of the recent reduction in plates, sheets, and bars, several fair contracts have been given out in these connections, in which orders had rather accumulated since the beginning of December; but after all is recognised, it remains that there has been no great buying engaged in, and probably cannot well be in existing circumstances, which are far from favourably defined. Pig-iron continues very firm in price, the late additions to blast furnace production still leaving it unequal to the covering satisfactorily of consumers' wants. Demand for pigs for export to South America and the colonies is almost active, and more than sets off the imports of basic sorts from the Continent. The imports of bar iron and all kinds of sectional material from Belgium continue on a heavy scale, and because of the lower prices ruling many consuming and finishing departments are benefiting, and are more fully employed than they could have been had they been wholly dependent on home supply sources. Fortunately, supplies of coal are plentiful, and one or two authorities are looking for an early break in quotations for inland qualities. Rumours in the last day or two have been current of intentions on the part of shipbuilders and engineers to reduce wages by 25 per cent.; but the stories are denied in employers' quarters, where the feeling is that the time has not come for any move on their part, and will not arise, if it can be at all helped, until costs of living reach an easier level.

Our Middlesbro' correspondent's report, dated December 22nd, is at follows:—Pig-iron: The market is quite inanimate. There is still some home demand for foundry pig-iron, but as far as the export trade is concerned, no business is possible at current quoted prices either for Cleveland or hematite pig-iron. Prices of both are unchanged this week, but a reduction early in the New Year is considered inevitable if we are to retain our export trade. Manufactured iron and steel: Our steel makers have sufficient work for the present, but inquiry for the future has fallen off very much. Prices will probably have to be reduced shortly to tempt buyers. Steel ship plates, home, £24 10s; steel ship angles, home, £24; iron bars, home, £27 10s; steel rails, home, £25 10s net. Iron ore: The easier condition of the pig-iron and steel markets has reacted on iron ore, with the result that forward business has practically ceased, and business, even in prompt cargoes, is very difficult. 49s is about the price for best Rubio now.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

A considerable change has come over the Cumberland hematite pig-iron trade in Cumberland and North Lancashire during the past four weeks. The fear expressed when the coal strike occurred, that the end had arrived of the prosperity which had been enjoyed since the beginning of 1919, has been realised. Consumers' needs have dwindled, and they view the future with so much apprehension that they decline to buy in other than a hand-to-mouth fashion. Order books in a few weeks' time will be comparatively bare, and it is doubtful whether the present production can be maintained throughout the remainder of the winter. Certainly no business covering anything like the customary period over which commitments are spread will be available. What may be in store in the spring no one can yet say. Confidence, however, cannot possibly be restored until the new Budget is forthcoming, and then only if the financial conditions are less stringent, and if E.P.D. disappears. On their part makers also are pursuing a cautious policy. They cannot afford to accumulate stocks, and they will damp down furnaces if the occasion should arise. It is doubtful whether they had any hope when they reduced the price of ordinary iron by 20s per ton to £13 15s per ton at works that any volume of new business would thereby be secured to them. The reduction in values has not yet helped them, and, indeed, they were probably the last to believe that users would buy on a falling market. Further depreciation in values is inevitable, and there are those who declare that Bessemer mixed numbers will not be marked as high as £10 at the end of next year. Meantime, 25 furnaces are in operation between Workington and Carnforth, the bulk of the low phosphorus iron continuing to be absorbed by the Midlands and the major portion of the make of ordinary iron by the local steelworks. How long the consumption of ordinary iron can remain at the present level is also problematical. The steel trade is duller than ever, and the mills are rolling very little that was not ordered quite recently. The depression is also settling down on the iron ore industry. It is true that the demand for superior grades of ores is as eager as ever; but the requirements of medium and ordinary sorts are smaller, and metal is now being sent to the East Coast and Scotland. As far as the coal trade is concerned, the production for the first time since 1914 is in excess of needs. There has been a slackening of the demand for steam coal, and land sale alone is an active market. Durham and Northumberland coal has ceased to be required in Cumberland. The local coke industry is naturally feeling the pinch. With fewer furnaces on ordinary iron using the coke the ovens cannot be kept working at full speed, and many of them, in fact, are working one shift less a day. The reduction in price of coke to £4 has not quickened the demand from the Continent, which was so brisk a year ago. Southern Europe is looking askance at coke, and the export has dropped to 1,000 tons per week, and even that small total, it is believed, cannot be kept up much longer. The rectification of benzol is not a paying proposition at a time when crude benzol is in such big demand. Sulphate of ammonia is moving away freely. Pitch has been accumulating in the expectation of a drop in freights.

MANCHESTER, December 22.

We continue to experience an idle market. The absence of workable demand has been very pronounced. In cloth for China rather more inquiry has been mentioned, but there has been a poor response to the prices wired out. Some dealers in Shanghai, however, seem rather disposed to average purchases by buying cheap lots in Manchester to mix with the dear stocks abroad. Clearances in Calcutta are said to be fairly encouraging, but no new business has been about. The minor outlets East and West remain quiet. Many manufacturers have arranged to extend the usual holidays this week-end. The yarn market has been depressed. Despite the big curtailment of production, spinners cannot clear the output, and stocks have been offered freely, but users have purchased very sparingly.

AMERICAN COTTON CROP.

At the beginning of this week the Census Bureau of the United States Government issued its seventh report of the season on the amount of cotton ginned, particulars being given up to the 13th instant. It was stated that 10,878,000 bales had been ginned, against 9,396,000 bales in 1919 and 10,281,000 bales at the same time in the year before. The feature of the figures, which were about equal to expectations, was the large amount for Texas of 3,602,000 bales, as compared with 2,233,000 bales last year.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says :— There appears to be a little more business passing here and there, but it is mostly in small lots of tops and yarns for immediate use and generally at low prices. No material expansion can be expected for a few weeks, but in some quarters there is an impression that trade will revive somewhat after the turn of the year. It is significant that inquiries are still being made for khaki yarns and cloth, especially for great coats. These inquiries are from Russia, though they do not come direct, and immediate delivery is wanted. The whole business, however, does not amount to a great deal, and it has no effect on prices. Members of the trade are keenly interested in the scheme which has been put forward by the Australians for taking over from the Imperial Government the surplus stocks of Australian wool, and there is a sharp difference of opinion as to whether the proposal would be to the ultimate good of the trade. Generally speaking, traders object on principle to anything in the nature of an attempt to bolster up prices by artificial means, and it is feared that such a scheme as that proposed might have the effect of hardening the value of raw material without in any way increasing consumption or increasing the demand for wool products. The heavy stocks of wool are overshadowing the whole market at present, and what is urgently needed is something to increase the consumption; in other words, a wider outlet for finished goods abroad.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Very great interest is still being taken in the proposals made by the British-Australian Wool Realisation Association, some most important information in relation thereto having been given by Sir Arthur Goldfinch, Director of Raw Materials. The lucid explanations given, and the practical suggestions made, should be of great value to the trade, and there is no doubt that they will receive full consideration. It appears that the Colonial Wool Merchants' Association have offered their services in helping to get rid of the big surplus stocks of Government-owned wool, while the British Wool Federation have also begun to make inquiries. Sir Arthur Goldfinch's statement is undoubtedly the most important contribution to all that has been said on the subject. He states clearly that the Australians have a proprietary interest in half the surplus assets of the Imperial Wool Purchase Account. That being so, the British Government are not the sole owners of the present huge stocks of wool, notwithstanding the general impression that this wool had been bought and paid for by British taxpayers' money on the understanding that half the net profits were to go to the Australian growers. Sir Arthur Goldfinch has also stated that "The wool purchased during the last four years was not bought outright and unconditionally at the low price which was then agreed upon. There were other conditions which were just as much part of the contract as the price, and one of them was that all wool used for civilian purposes was to be sold by the Imperial Government on joint account with the other partner, and to the best advantage. It has long ago been admitted that this implies the right of the Dominion Governments to have some say as to the selling price of the wool." This is a feature of the original transaction of which the trade has had little or no knowledge, and Sir Arthur Goldfinch's statement makes it quite clear that the scheme will have to be considered in the light of the mutual interests of both countries. The opinion is entertained in some quarters that if all wool used for civilian purposes was to be sold by the Imperial Government on joint account, the said Government cannot ignore the proposals brought forward by the British-Australian Wool Realisation Association, and the trade now appears to be completely at the mercy of those who are seeking to dictate wool values. It is to be sincerely hoped that no trouble will result, but whether the wool is taken off the market or not, the majority of users are of the opinion that prices will not be beneficially affected. It is well enough known what quantity of unconsumed wool there is in this country, and how much is likely to come forward from producing countries. All this raw material will have to come on to the market sooner or later, and in the meantime the production of wool will continue. Whatever arrangements have been made between the Australian and the British Governments, it is impossible to see how the effect of supply and demand can be overcome. It may be taken as a foregone conclusion that users will not be cajoled into purchasing the raw material at anything above a market price, whether it is offered in the colonies, London, South America, or South Africa.

Trade shows no improvement whatever. Practically all the mills in the West Riding will be standing during the whole of next week. Factories which have been running day and night for the past ten years are now only running two days per week, from 9 a.m. to 5 p.m. The only firms running full time are those engaged on old orders, and as new business is largely conspicuous by its absence, the immediate prospect is that short time will become more general, and that where it has already been introduced, it will become shorter still. The slump in the raw material has been remarkable, and yet neither merino nor crossbred wool can be bought in any market in the world to be converted into tops and sold in Bradford at prices which are current in that centre to-day. In other words, tops are cheaper than wool, an anomaly which ought not to exist.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

It is not possible to report any improvement in the market for either oilseeds or their products. On the contrary, the downward tendency has become more accentuated in view of the pressure of holders to sell and the almost infinitesimal demand. Linseed has been very inactive, and has declined daily, a small transaction in Plate being reported at £19 10s spot, since when the value has further receded for both Argentina and Indian varieties. The position both on spot and forward is very weak, the market being almost glutted with linseed, for which there are no buyers, and not likely to be until the consumptive demand for the oil product revives. Linseed oil has dropped £8 per ton on the week, and was offered at Hull on Tuesday at £34 10s without attracting takers, £1 premium being asked for January-April delivery.

Cotton-seed has also been inactive, with only an insignificant business in Egyptian passing at slightly lower prices. Bombay, however, is quite neglected, and on further arrivals cheaper. Cotton oils have further declined, but have been in moderate demand at the lower level. Rape-seed, palm kernel, and ground nut oils also have fallen in value and demand.

The quantity of linseed afloat continues to maintain a high figure, though it is slightly less than for the past four weeks, the total for the United Kingdom being 46,500 tons, and for the Continent 45,100 tons. Cotton-seed on passage to the United Kingdom is returned at 21,400 tons, and rape-seed, chiefly to the Continent, 15,000 tons.

Regarding the Plate crop of linseed now being harvested, private estimates put the probable yield at about 900,000 tons, against 1,069,000 tons, the official record last season's outturn and 705,000 tons in 1918. The final estimate of the United States linseed is 275,000 tons, against 223,000 tons last season, from which it is argued America will again be a large buyer from Argentina.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The domestic hide market continues weak, and it is expected that further declines in price will take place at this week's sales, as large quantities will be thrown on the market owing to the Christmas demand for beef. Tanners are not buying in view of the unstable position, and stocks in markets and factors' hands are steadily accumulating. In some cases hides and skins are now down to pre-war values. There is very little doing in foreign hides, as wet salted are dear compared with fresh market stock. South American saladeros are rather more freely offered, but 10½d is the best offer recorded for fregorific Smithfields.

Member of Federal Reserve System.

The leather trade has been a shade better owing to the demand from boot repairers, caused by the spell of severe weather. Values of bends and butts are still declining, and tanners have made up their mind to cut losses on leather in process, and offer on replacement values. Offal is selling badly, and very low prices have been accepted for shoulders and bellies to clear accumulations before stocktaking. Split hides, too, have been sold well under the cost of production, several large transactions having been done in Bermondsey this week. Upper leather moves off only in small parcels as required; prices of box and willow calf are dropping, but the competition is now very keen with imported stock. Questions in Parliament have been asked in regard to sales of imported leather at unrestricted prices, but the usual vague replies have been given.

Most shoe manufacturers are closing down for the entire week, some, in fact, for a longer period. It is, however, satisfactory to hear that of late there has been a small run on factors' stocks, as the wet weather soon found out the alleged cheap boots which have been foisted off on the public for the past few months.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Thursday, December 23.

A very quiet state of affairs proved the leading feature in most markets during the week, demand for nearly all commodities being reduced to a minimum, and with some pressure to sell owing to financial considerations certain articles suffered a further sharp slump in price.

SUGAR.—Only a retail amount of business transpired this week, and immediate delivery was claimed, but prices were not altered to any extent. Crystallised West India sold, 69s to 71s; Barbadoes fine muscovado, 50s; and some white Mauritius, 79s. American syrup in slow support at recent lower range of values. Honey dull.

TEA.—No auctions were held this week, being suspended for the Christmas holidays. By private treaty, a moderate demand ensued, and prices disclosed general steadiness.

COCOA.—Market dull and depressed. Fine Grenada, spot, quoted 56s to 57s; Accra, F/F quality, December-February, sold, 40s to 39s, ex quay terms.

COFFEE.—No public sales held, and by private treaty only retail sales were effected at prices inclining in favour of the buyer. Future deliveries more or less neglected.

RICE quiet, both with regard to spot and forward parcels. Bran idle.

SPICE.—Pepper in quiet support, and rates ruled irregular and weaker. Fair black Singapore, spot, sold, 4d to 3¾d; ditto, January-March, 3¾d; Aleppy, spot, 4d; Tellicherry, 4¼d; white Singapore, spot, 7½d; Muntok, 8d; ditto, January-March, 7½d. Zanzibar cloves, spot, 1s 3d; December-February, 9½d. Pimento, spot, 3½d; flake tapioca, spot, 1½d; ditto, January-March, London, 17s; fair Penang seed, spot, 21s; small sago, ditto, 23s to 24s; sago flour, spot, 20s; ditto, January-March, sold, 15s; Japanese farina, spot, 26s; January-March, 22s 6d. Desiccated coconut, fine cut, spot, 57s 6d; medium, 62s 6d.

JUTE.—Business was reduced to a minimum this week, and market ruled purely nominal. Native first marks assortment, actuals, December-January and January-February, sellers, £38; subs, £32; Daisee No. 2, actuals, £33 10s; lightning, actuals, £27; and subs, £25. Calcutta hessians and also twills quite neglected, and prices tend downward.

HEMP.—Manila slow of sale, but rates steady, as sellers refrained from pressing. J grade, January-March, sellers, £55; K, £47; L, £46 10s; M, £37 10s. Fair New Zealand, October-December, sellers, £50 10s.

SHELLAC very quiet, and market unsettled. T.N. orange, fair, quoted, 370s to 380s; March, sold, 250s to 210s.

COPRA.—Market dull and depressed. F.M.S. Straits, December February, London, sold, £41 to £36, then £37 10s, but later at £38, with Continental ports at proportionate figures. Ceylon nominal. Palm kernels sold down to £25 10s.

MENTHOL.—Spot, sold, 26s; peppermint oil, 5s; aniseed, 2s 9d; slab camphor, Japanese, 5s; Chinese, 4s 9d; crude, 2s 4½d.

RUBBER.—Very flat, as buyers were reserved and some forced liquidations ensued. Crepe, spot, sold down to 10d; January-March, 10¼d to 10½d; April-June, 11½d to 1s. Sheet, spot, sold down to 9d; January-March, 9½d. Fine hard Para, spot, 1s 1d per lb.

OILS.—Linseed easier. Spot, net, naked, 39s; January-April, 36s 6d. Rape quiet. Crude, spot, 70s; refined barrels, 78s. Cotton dull. Crude Egyptian, 43s; Bombay, nominal; common edible, 55s. China wood easier. Hankow, spot (barrels), 90s; and Hong Kong, spot, 85s. Coconut lower. Ceylon, spot, 69s; November-January, 67s; Cochin, ditto, 69s 6d. Soya quiet. Oriental, afloat, cases, 42s; barrels, 46s. Japan fish quiet. November-December (cases), 34s. Cod liver quiet. English, spot, 34s. Groundnut quiet. English crushed, naked, spot, 55s; deodorised (barrels), 78s. Turpentine quiet. American, spot, 100s; December, 100s January-April, 100s. Rosin quiet. American, grade B, 39s; F, 40s; G, 40s 6d; K, 41s; M, 41s 6d; WW, 42s; French, F/G, 39s; H, 40s; WW, 42s; extra pale, 43s. Petroleum steady. American, spot, 2s 3¼d; and waterwhite, 2s 4¼d per gallon.

OILSEEDS.—Linseed: Market easier. Calcutta, December-January, nominally £22 10s. Bombay, December-January, £23 5s. Plate, afloat, Hull, sold, £19; November-December, £19 5s; January-February, new crop, sold, £20 10s to £20. Rapeseed lower.; Toria, November-December, sellers, £23; real bold Ferozepore, £22; brown Cawnpore, £20. Cottonseed quiet. Egyptian, black, December, £13. Bombay, spot, Hull, £8 10s, new; December, £10. Gingelly easier. Chinese, November-January, to Continent, sold, £28. Ground nuts easier. Coromandel, January-February, machine-dried, £19 10s paid per ton.

METALS.—Tin continued easier until last Tuesday on further selling desire, end of month being sold down to £205 (since at £205 10s), early January at £206, and three months' between £209 and £210. The market again relapsed at Wednesday's meeting, cash realising £203 10s to £202 10s; early February £207; and three months' at £209 to £207 10s. At Thursday's session, values again yielded, cash being done at £198 10s to £197 10s, and since at £198; early January, £202 10s to £198; three months', £206 to £203, improving to £205. English ingots, £193 to £194. Copper manifested a declining tendency under fairly liberal offers, standard cash by the middle of the week being sold at £73, and three months' £73 to £73 10s. The tendency was again lower at Thursday's session, with cash done at £72 5s, and three months at £73 to £73 5s. Electros, £83 to £84. Lead easier at £21 10s to £22 15s. Spelter weaker at £22 10s to £24 12s 6d, according to position. Antimony: Regulus, English, ordinary to best, £45 to £48. Aluminium: Home trade, £165; export, £185. Wire bars, £83 to £84.

TALLOW.—Messrs Colchesters and Woolner write on December 22nd as follows:—The tallow market was quiet during the week, and prices are quoted unchanged in the absence of business, but sellers are not unprepared to entertain bids approximating to rates recently current. There will be auctions on Wednesday, January 5th next. At auction yesterday 1,731 casks tallow were offered, and 12 were sold. Quotations are:—Australian mutton: Fine, 58s 6d; good to fair, 58s to 54s; dull to dark, 50s to 42s; hard, 58s. Australian beef: Fine, 60s; good to fair, 58s to 50s; dull to dark, 45s to 42s; sweet, 70s. Present shipment from Australasia: Mutton, fair coloured, 48 degs., 55s; and mixed, 43½,c.i.f., London, 53s. The market letter is unchanged. Town tallow, 50s per cwt. Rough fat, per 8 lbs, 7d; melted stuff, 35s per cwt. Quotations are:—Town: 43s net cash, naked, ex works. Country: Frail casks, 40s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 45s to 40s. Bone fat: White, none; pale, 43s; benzine, 40s; melted stuff, 39s, f.o.b.

President
JAMES S. ALEXANDER

Capital Paid up $25,000,000
Surplus and Undivided Profits over $30,000,000

The Foreign Department of the National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

Resources over $500,000,000

KENNETH H. ROCKEY, *Representative*,
17, Sherborne Lane, King William Street,
London, E. C. 4

NATIONAL BANK OF COMMERCE 1839 IN NEW YORK

Investment of Idle Funds

DURING December interest payments are due on many first class securities. The problem of the proper investment of this additional income is therefore the concern of many holders.

The Bond Department of the Guaranty Trust Company of New York is prepared to make recommendations of high class sterling or dollar investments. They will further, if required, accept fixed deposits at favourable interest rates, pending a decision as to the employment of the funds.

A booklet entitled "British Government Securities and the Investor" has recently been published by this Company, containing a concise statement of the investment features of several outstanding Government Securities, and will be sent on request.

Guaranty Trust Company of New York

32 LOMBARD STREET, LONDON, E.C. 3.

Deduct—		
First Dividend of 5 per cent. on Preference Share Capital, paid 31st December, 1919	$425,000.00	
Second Dividend of 6 per cent. on ditto, paid 30th June, 1920	510,000.00	
First Dividend of 5 per cent. on Ordinary Share Capital, paid 31st December, 1919	2,352,839.50	
Second Dividend of 6 per cent. on ditto, paid 30th June, 1920	4,666,637.40	
		7,954,476.90
Balance Unappropriated ...		$46,090,061.62
which it is proposed to apply as follows:—		
Final Dividend of 49 per cent. on Preference Share Capital, making 60 per cent. for the year		$4,165,000.00
Final Dividend of 49 per cent. on Ordinary Share Capital, making 60 per cent. for the year		38,110,872.10
Carry forward to next year		3,814,189.52
		$46,090,061.62

Successful drilling operations have continued throughout the year. As stated in the Report attached to the Accounts for the year ended June 30th, 1919, Wells Nos. 5, 9 and 10 in the Naranjos Field were successfully brought in during the month of November, 1919, with an estimated daily production of 50,000, 90,000 and 60,000 barrels respectively. To these have now been added Wells Nos. 12, 14 and 15, with an estimated daily production of 20,000, 50,000 and 35,000 barrels respectively.

A new pool known as Zacamixtle, and located some 6 miles south of Naranjos, has recently been proven, and the Company's Well No. 1 in this Field was successfully brought in and capped during the latter part of October this year, with an estimated daily production of 75,000 barrels. Other wells are in process of drilling in the same Field.

In view of the Company's very extensive reserve territories, the appearance of salt water in some of the more heavily exploited fields is not causing anxiety, being more than compensated by the policy of keeping exploration work well ahead of production requirements.

The Company's Crude Oil supply is largely in excess of its present pipeline capacity of 110,000 barrels daily. In order to take care of this a third line into Tampico has been agreed to and will be proceeded with as soon as possible. The completion of this pipeline will render possible the delivery to the Ports of Tampico and Tuxpam of a total quantity of 140,000 barrels of Crude Oil daily.

The total amount of Oil loaded at Tuxpam during the year was 10,350,000 barrels. Shipments from Tampico, consisting chiefly of refined oils, amounted to 5,941,400 barrels. Refined oil shipments from Minatitlan amounted to 1,334,607 barrels.

The Crude Oil throughput at the Tampico Refinery is at present approximately 45,000 barrels per day, or more than double that of last year. Due to the proposed increase in the pipeline capacity, arrangements are now being made to increase the quantity of Oil to be treated at this Refinery to 90,000 barrels daily.

The Refinery at Minatitlan is now operating at a throughput of 12,000 barrels daily, being an increase of 2,000 barrels daily over last year. Arrangements are being made to increase this throughput to 15,000 barrels daily early in 1921.

Due to long delays in the delivery of material, the increased Topping Plant capacity at Tuxpam was considerably delayed, but is now in operation. This gives a topping capacity of 15,000 barrels daily, which it is proposed to increase to 25,000 barrels daily by the middle of 1921.

The Eagle Oil Transport Company's fleet of Tank Vessels, all of which are entirely in the service of the Company, amounts to 230,000 tons d.w. capacity, and, in order to take care of the increased oil production, further vessels have been ordered to the extent of 207,000 d.w. tons. The bulk of this additional tonnage is due for delivery during 1921, and with this in service the Company will be able to dispose of adequate transportation facilities for its increased production.

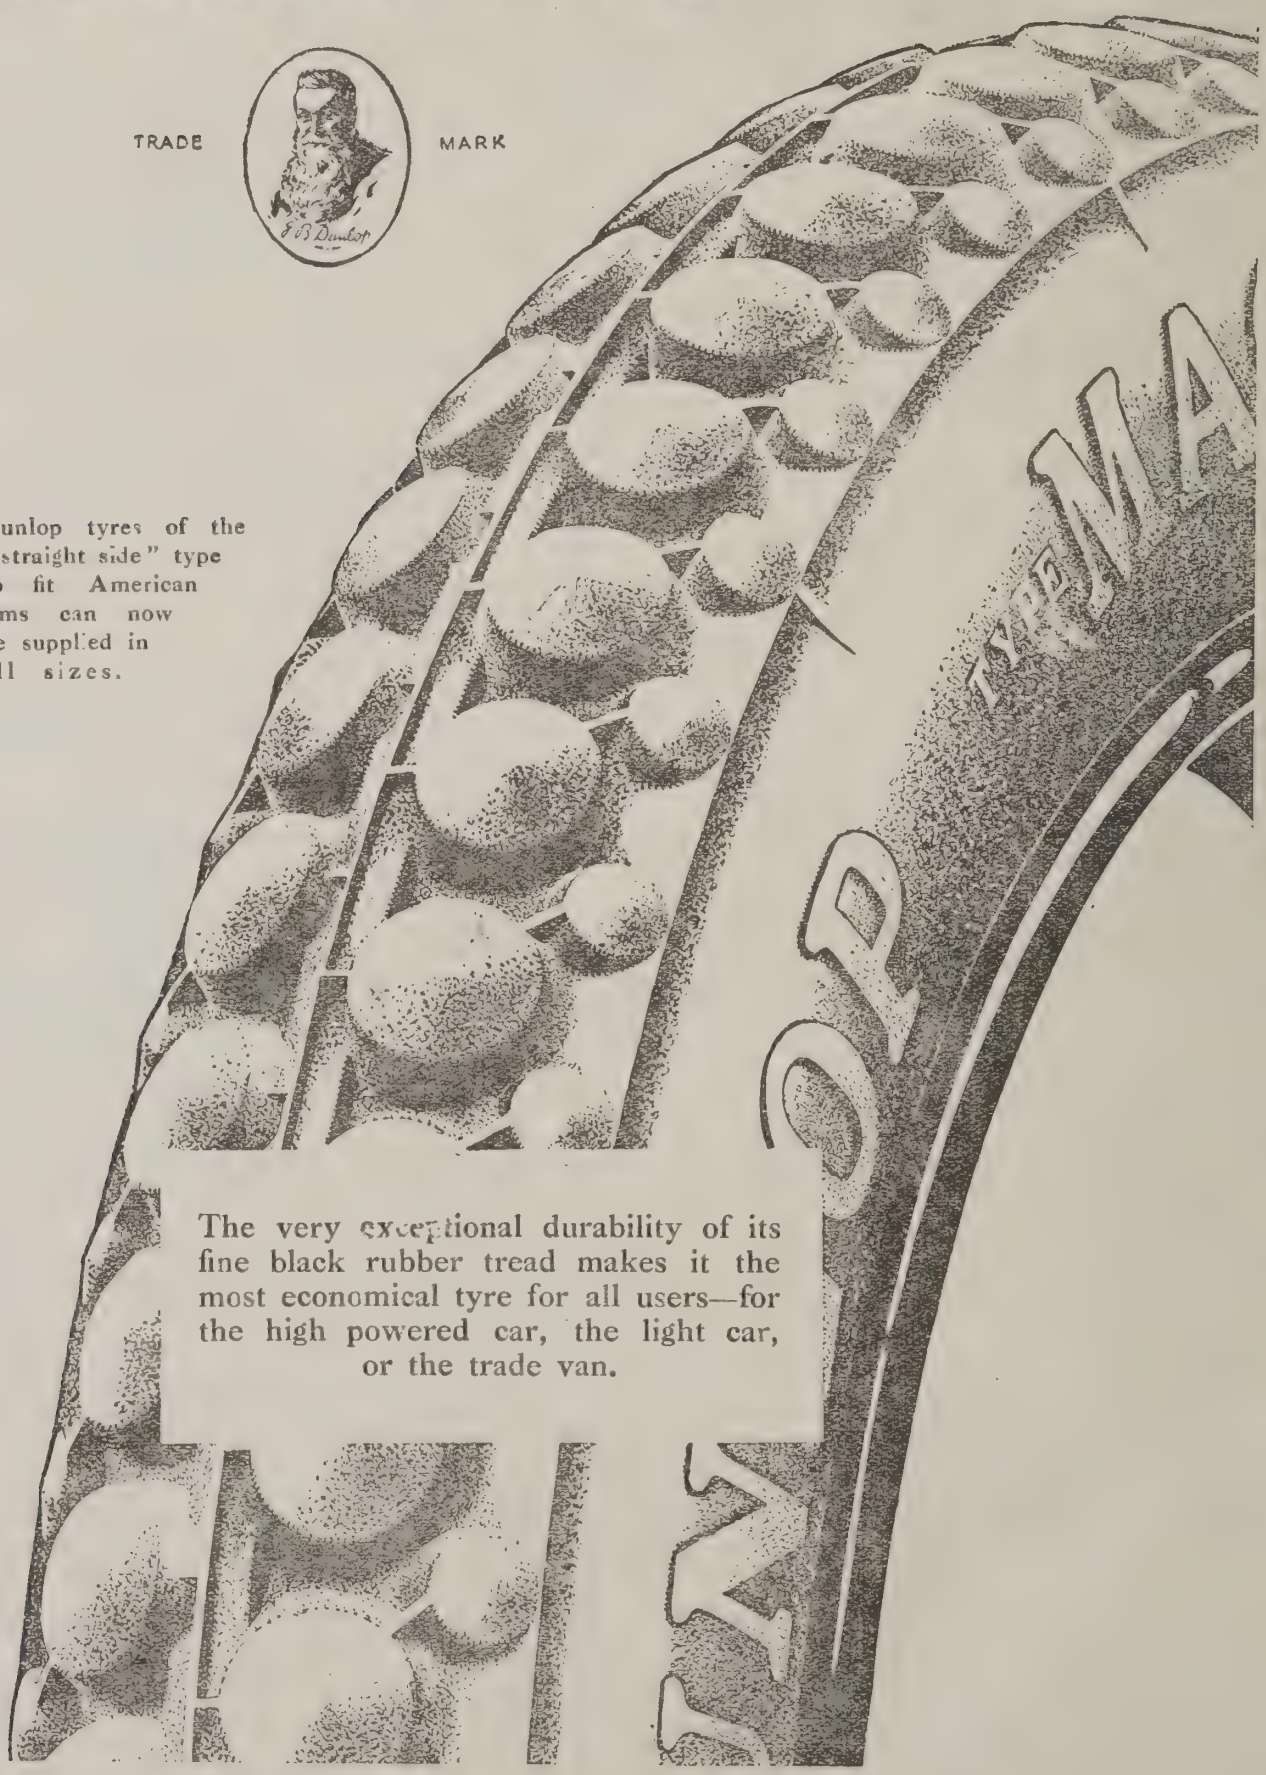
The Company's Refineries and Pipelines have continued to operate satisfactorily during the year.

The Company has recently authorised an increase of Capital of Mex. $44,886,420 in Ordinary Shares of 10 pesos each, making the total authorised Capital $160,000,000 pesos Mex. Of the increased Capital, Shares are being offered to the Shareholders in the proportion of one new Share for each two old Shares (either Preference or Ordinary) held by them.

The Directors desire once more to emphasise the fact that the success of the Company's operations is in no small measure due to the ability, energy and loyalty of the Officers and Staff in Mexico, to whom they desire to express their deepest appreciation.

By Order of the Board,

THOS. J. RYDER, President.



Avenida Juarez, 92/94, Mexico City.
22nd December, 1920.

Copies of this Report and of the Accounts may be obtained on application to the London Financial Agents of the Company, Whitehall Securities Corporation, Limited, 47, Parliament Street, London, S.W.1.

DUNLOP

THE NEW MAGNUM TYPE

TRADE MARK

Dunlop tyres of the "straight side" type to fit American rims can now be supplied in all sizes.

The very exceptional durability of its fine black rubber tread makes it the most economical tyre for all users—for the high powered car, the light car, or the trade van.
